# Regulation of Cryptocurrency Around the World

*Prepared by the Staff of Global Legal Research Directorate*

## Comparative Summary

This report surveys the legal and policy landscape surrounding cryptocurrencies around the world. While not dissimilar in form to the 2014 Law Library of Congress report on the same subject, which covered forty foreign jurisdictions and the European Union, this report is significantly more comprehensive, covering 130 countries as well as some regional organizations that have issued laws or policies on the subject. This expansive growth is primarily attributable to the fact that over the past four years cryptocurrencies have become ubiquitous, prompting more national and regional authorities to grapple with their regulation. The resulting availability of a broader set of information regarding how various jurisdictions are handling the fast-growing cryptocurrency market makes it possible to identify emerging patterns, some of which are described below. The country surveys are also organized regionally to allow for region-specific comparisons.

One interesting aspect of the fast-growing cryptocurrency market is the fluidity of the terms used to describe the different products that fall within its ambit. While the various forms of what are broadly known as “cryptocurrencies” are similar in that they are primarily based on the same type of decentralized technology known as blockchain with inherent encryption, the terminology used to describe them varies greatly from one jurisdiction to another. Some of the terms used by countries to reference cryptocurrency include: digital currency (Argentina, Thailand, and Australia), virtual commodity (Canada, China, Taiwan), crypto-token (Germany), payment token (Switzerland), cyber currency (Italy and Lebanon), electronic currency (Colombia and Lebanon), and virtual asset (Honduras and Mexico).

One of the most common actions identified across the surveyed jurisdictions is government-issued notices about the pitfalls of investing in the cryptocurrency markets. Such warnings, mostly issued by central banks, are largely designed to educate the citizenry about the difference between actual currencies, which are issued and guaranteed by the state, and cryptocurrencies, which are not. Most government warnings note the added risk resulting from the high volatility associated with cryptocurrencies and the fact that many of the organizations that facilitate such transactions are unregulated. Most also note that citizens who invest in cryptocurrencies do so at their own personal risk and that no legal recourse is available to them in the event of loss.

Many of the warnings issued by various countries also note the opportunities that cryptocurrencies create for illegal activities, such as money laundering and terrorism. Some of the countries surveyed go beyond simply warning the public and have expanded their laws on money laundering, counterterrorism, and organized crimes to include cryptocurrency markets, and require banks and other financial institutions that facilitate such markets to conduct all the due diligence requirements imposed under such laws. For instance, Australia, Canada, and the Isle of Man recently enacted laws to bring cryptocurrency transactions and institutions that facilitate them under the ambit of money laundering and counter-terrorist financing laws.

Some jurisdictions have gone even further and imposed restrictions on investments in cryptocurrencies, the extent of which varies from one jurisdiction to another. Some (Algeria, Bolivia, Morocco, Nepal, Pakistan, and Vietnam) ban any and all activities involving cryptocurrencies. Qatar and Bahrain have a slightly different approach in that they bar their citizens from engaging in any kind of activities involving cryptocurrencies locally, but allow citizens to do so outside their borders. There are also countries that, while not banning their citizens from investing in cryptocurrencies, impose indirect restrictions by barring financial institutions within their borders from facilitating transactions involving cryptocurrencies (Bangladesh, Iran, Thailand, Lithuania, Lesotho, China, and Colombia).

A limited number of the countries surveyed regulate initial coin offerings (ICOs), which use cryptocurrencies as a mechanism to raise funds. Of the jurisdictions that address ICOs, some (mainly China, Macau, and Pakistan) ban them altogether, while most tend to focus on regulating them. In most of these latter instances, the regulation of ICOs and the relevant regulatory institutions vary depending on how an ICO is categorized. For instance, in New Zealand, particular obligations may apply depending on whether the token offered is categorized as a debt security, equity security, managed investment product, or derivative. Similarly, in the Netherlands, the rules applicable to a specific ICO depend on whether the token offered is considered a security or a unit in a collective investment, an assessment made on a case-by-case basis.

Not all countries see the advent of blockchain technology and cryptocurrencies as a threat, albeit for different reasons. Some of the jurisdiction surveyed for this report, while not recognizing cryptocurrencies as legal tender, see a potential in the technology behind it and are developing a cryptocurrency-friendly regulatory regime as a means to attract investment in technology companies that excel in this sector. In this class are countries like Spain, Belarus, the Cayman Islands, and Luxemburg.

Some jurisdictions are seeking to go even further and develop their own system of cryptocurrencies. This category includes a diverse list of countries, such as the Marshall Islands, Venezuela, the Eastern Caribbean Central Bank (ECCB) member states, and Lithuania. In addition, some countries that have issued warnings to the public about the pitfalls of investments in cryptocurrencies have also determined that the size of the cryptocurrency market is too small to be cause for sufficient concern to warrant regulation and/or a ban at this juncture (Belgium, South Africa, and the United Kingdom).

One of the many questions that arise from allowing investments in and the use of cryptocurrencies is the issue of taxation. In this regard the challenge appears to be how to categorize cryptocurrencies and the specific activities involving them for purposes of taxation. This matters primarily because whether gains made from mining or selling cryptocurrencies are categorized as income or capital gains invariably determines the applicable tax bracket. The surveyed countries have categorized cryptocurrencies differently for tax purposes, as illustrated by the following examples:

## Regulation of Cryptocurrency Around the World

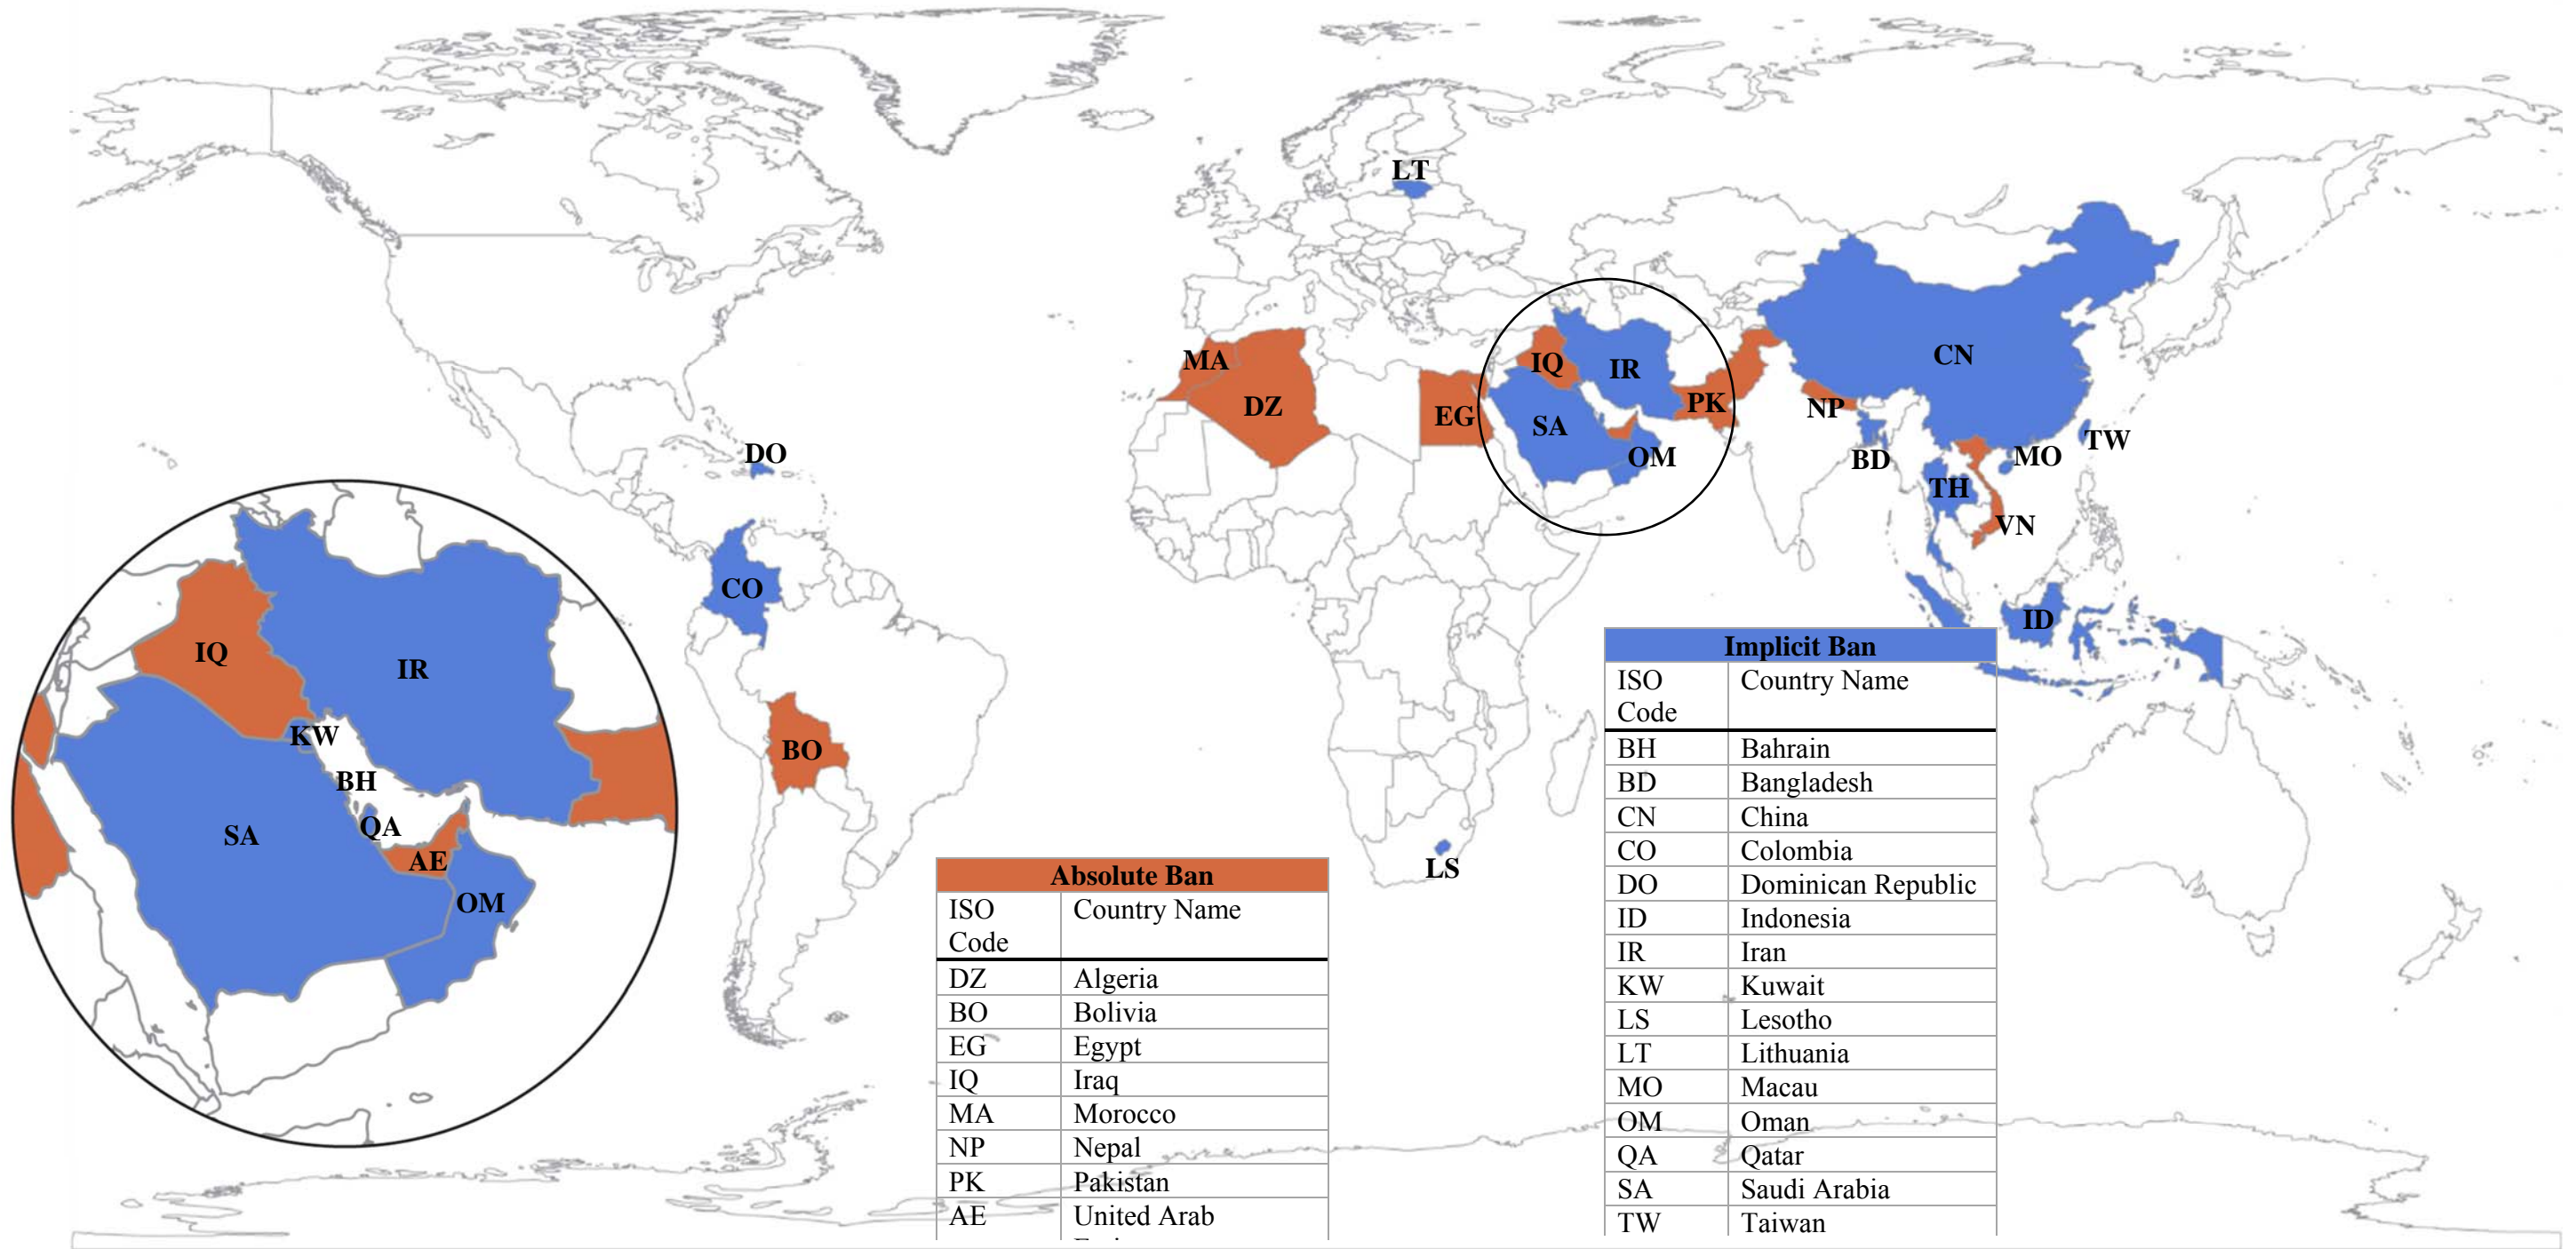

Israel	→	taxed as asset
Bulgaria	→	taxed as financial asset
Switzerland	→	taxed as foreign currency
Argentina & Spain	→	subject to income tax
Denmark	→	subject to income tax and losses are deductible
United Kingdom:	→	corporations pay corporate tax, unincorporated businesses pay income tax, individuals pay capital gains tax

Mainly due to a 2015 decision of the European Court of Justice (ECJ), gains in cryptocurrency investments are not subject to value added tax in the European Union Member States.

In most of the countries surveyed for this report that have or are in the process of devising taxation rules, the mining of cryptocurrencies is also exempt from taxation. However, in Russia mining that exceeds a certain energy consumption threshold is taxable.

In a small number of jurisdictions surveyed cryptocurrencies are accepted as a means of payment. In the Swiss Cantons of Zug and a municipality within Ticino, cryptocurrencies are accepted as a means of payment even by government agencies. The Isle of Man and Mexico also permit the use of cryptocurrencies as a means of payment along with their national currency. Much like governments around the world that fund various projects by selling government bonds, the government of Antigua and Barbuda allows the funding of projects and charities through government-supported ICOs.

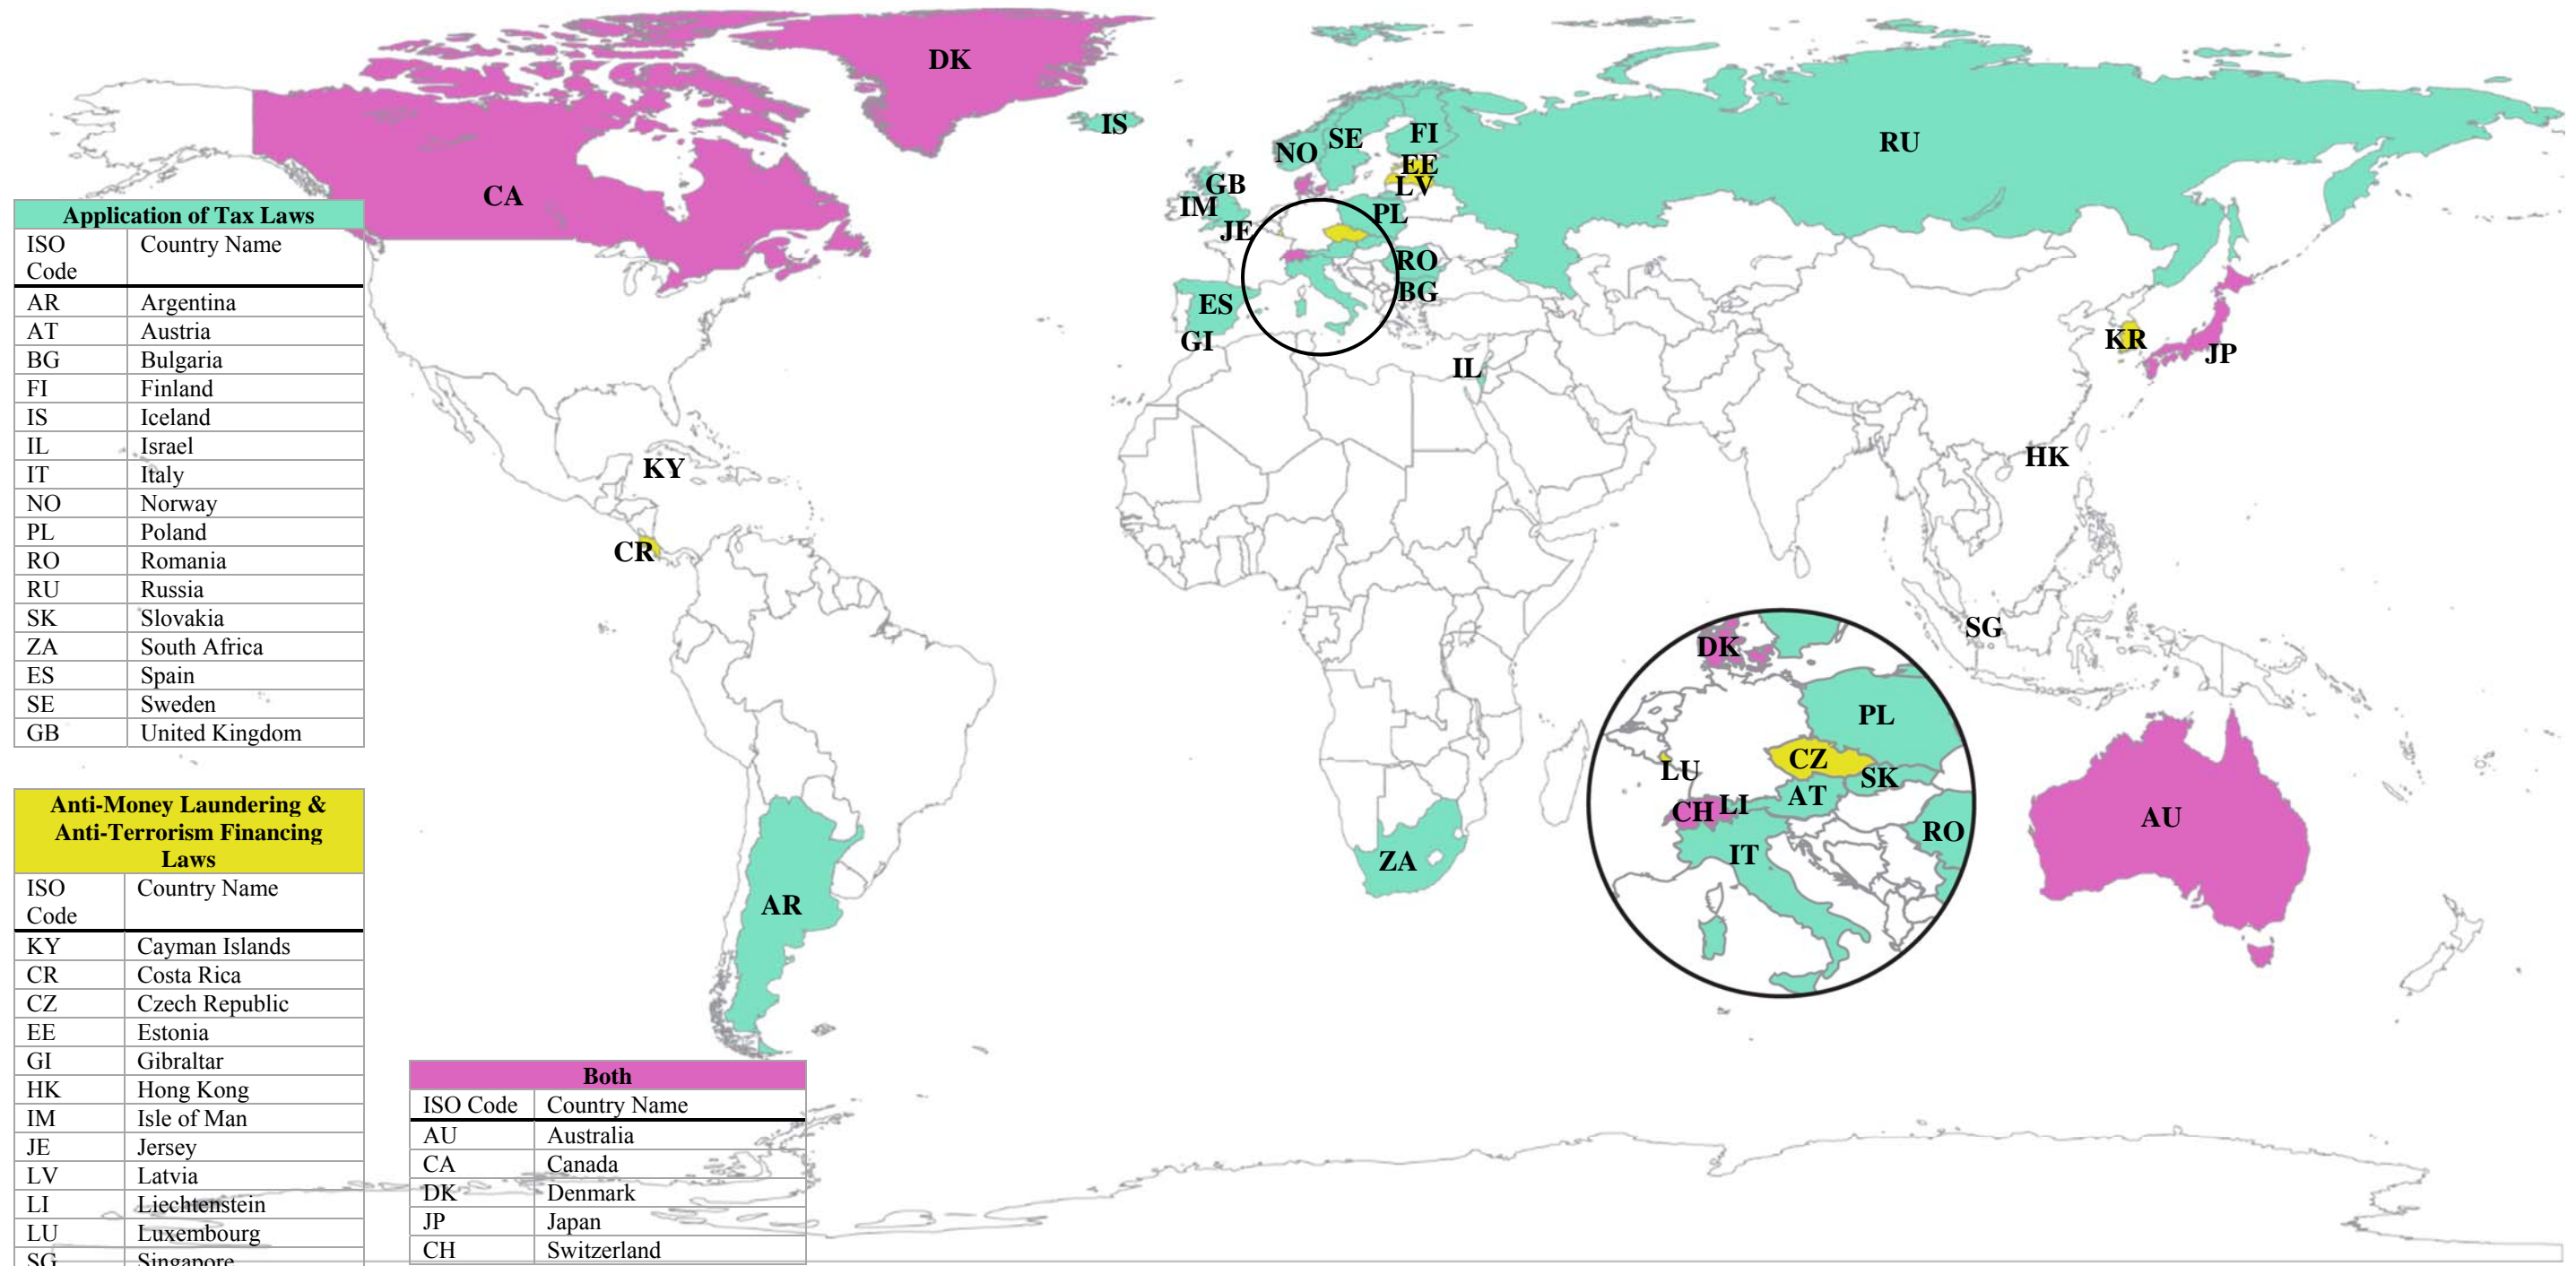

The following three maps visually represent findings from the report on the legal status of cryptocurrencies, the regulatory framework surrounding cryptocurrencies, and countries that have launched their own cryptocurrencies or are planning to do so.

# Legal Status of Cryptocurrencies

**Source:** Created by the Law Library of Congress based on information provided in this report.

# Regulatory Framework for Cryptocurrencies:

## Application of Tax Laws, Anti-Money Laundering/Anti-Terrorism Financing Laws, or Both

**Source:** Created by the Law Library of Congress based on information provided in this report.

# Countries that Have or Are Issuing National or Regional Cryptocurrencies

**Source & Note:** Created by the Law Library of Congress based on information provided in this report. As discussed in the report, the Eastern Caribbean Central Bank (ECCB), which is the monetary authority for eight island economies in the Eastern Caribbean Currency Union, has entered into an agreement for the development of a digital currency for member states.

## The Americas

### Argentina

Under the National Constitution of Argentina<sup>1</sup> the only authority capable of issuing legal currency is the Central Bank.<sup>2</sup> Bitcoins are not legal currency strictly speaking, since they are not issued by the government monetary authority and are not legal tender.<sup>3</sup> Therefore, they may be considered money but not legal currency, since they are not a mandatory means of cancelling debts or obligations.<sup>4</sup> Although bitcoins are not specifically regulated, they are increasingly being used in Argentina, a country that has strict controls over foreign currencies.<sup>5</sup> According to some experts<sup>6</sup> a bitcoin may be considered a good or a thing under the Civil Code,<sup>7</sup> and transactions with bitcoins may be governed by the rules of the sale of goods under the Civil Code.<sup>8</sup>

The latest amendment to the Income Tax Law provides that the profit derived from the sale of digital currency will be considered income and taxed as such.<sup>9</sup>

## Belize

Belize does not appear to have any legislation that specifically regulates cryptocurrencies.<sup>10</sup> Trading businesses in Belize are regulated by the International Financial Services Commission of Belize. The Commission does not appear to issue licenses for companies to engage in cryptocurrency exchanges.<sup>11</sup>

## Bermuda

Bermuda does not have legislation or regulations that specifically govern cryptocurrencies. The government is, however, in the early stages of crafting legislation and regulations that aim to establish Bermuda as an international destination for digital currencies, similar to its position in the insurance and reinsurance sectors.<sup>12</sup>

In late 2017, the government of Bermuda launched a task force to “advance the regulatory environment and develop Bermuda as a destination for Utility Tokens, Tokenized Securities, Cryptocurrencies and Coin Offerings.”<sup>13</sup> The aims of the task force are as follows:

- Creating a Crypto Currency Association with a defined Code of Conduct and Rules of Operation. The Bermuda Crypto Association is in the process of being formed and our aim is for this Group to be self-governing.
- The Bermuda Monetary Authority in conjunction with the Ministry of Finance will work together to draft a letter or document confirming; Utility Tokens are not a security as long as there is no promise of future value. The will allow companies from all over the world to set up in Bermuda for Crowd Funding.

Most importantly, the Legal and Regulatory Working Group will provide confirmation that Utility Tokens are not prohibited or contravening any local legislation.<sup>14</sup>

The task force has two working groups, directed by the Minister of National Security. One group is the Blockchain Legal and Regulatory Working Group and is tasked with ensuring that Bermuda’s legislation and regulations are conducive for the development of cryptocurrencies. The other is known as the Blockchain Business Development Working Group, which is tasked with aiding in the development of technology for cryptocurrencies. The Business Development Agency

is also partnering with the government in this endeavor to help bring new business to the island, create new jobs, and boost its gross domestic product.<sup>15</sup>

The government is also aiming to introduce a framework to regulate distributed ledger technologies (DLT) this year, to regulate firms that operate in or from Bermuda and use DLT to “store or transmit value belonging to others, such as virtual currency exchanges, coins and securitized tokens.”<sup>16</sup> This would cover “the promotion and sale of utility tokens, aligned with the DLT framework.”<sup>17</sup> There have been no further statements on the government of Bermuda’s public website that discuss the proposed regulatory framework.

On January 17, 2018, the Bermuda Monetary Authority issued a press release warning of the risks of initial coin offerings, noting that whether such offerings fall within its regulatory boundaries is determined on a case-by-case basis, but that most such offerings are “unregulated because there are no requirements with which they are required to comply at this time.”<sup>18</sup>

## **Bolivia**

The use of virtual currencies is prohibited in Bolivia.<sup>19</sup> The Central Bank has stated that the use of currency not issued by the monetary authority is not allowed in the country.<sup>20</sup> Cryptocurrencies such as Bitcoin are not regulated and therefore, the Central Bank warns about the possible losses that people using them are exposed to.<sup>21</sup>

## **Brazil**

On November 16, 2017, the Brazilian Federal Reserve Bank (Banco Central do Brasil) issued Notice No. 31,379 alerting citizens to the risks arising from the custody and trading operations of virtual currencies. The notice stated in part as follows:

Considering the growing interest of the economic agents (society and institutions) in so-called virtual currencies, the Brazilian Federal Reserve Bank warns that these are neither issued nor guaranteed by any monetary authority, so they have no guarantee of

conversion to sovereign currencies, nor are they backed in real assets of any kind, being the entire risk of the holders.

. . .

4. Companies that negotiate or keep so-called virtual currencies on behalf of users, natural persons or legal entities are not regulated, authorized, or supervised by the Brazilian Federal Reserve Bank. There is no specific regulation on virtual currencies in the legal and regulatory framework related to the National Financial System. The Brazilian Federal Reserve Bank, in particular, does not regulate or supervise operations with virtual currencies.

5. So-called virtual currency is not to be confused with the definition of electronic money referred to in Law 12,865 of October 9, 2013, and its regulation by means of normative acts issued by the Brazilian Federal Reserve Bank, according to the guidelines of the National Monetary Council. . . .<sup>22</sup>

## Canada

Canada allows the use of cryptocurrencies, including Bitcoin. According to a Financial Consumer Agency of Canada webpage on digital currencies, “[y]ou can use digital currencies to buy goods and services on the Internet and in stores that accept digital currencies. You may also buy and sell digital currency on open exchanges, called digital currency or cryptocurrency exchanges.”<sup>23</sup> However, cryptocurrencies, including Bitcoin, are not considered legal tender in Canada; “[o]nly the Canadian dollar is considered official currency in Canada.”<sup>24</sup> The Currency Act defines legal tender as

- bank notes issued by the Bank of Canada under the Bank of Canada Act
- coins issued under the Royal Canadian Mint Act[.]<sup>25</sup>

Canada’s tax laws and rules also apply to digital currency transactions, including those made with cryptocurrencies, and digital currencies are subject to the Income Tax Act.<sup>26</sup> The Canada Revenue Agency (CRA) “has characterized cryptocurrency as a commodity and not a government-issued

<sup>23</sup> *Digital Currency*, FINANCIAL CONSUMER AGENCY OF CANADA, <https://www.canada.ca/en/financial-consumer-agency/services/payment/digital-currency.html> (last modified Jan. 19, 2018), archived at <https://perma.cc/G3PY-H8NR>.

<sup>24</sup> *Id.*

<sup>25</sup> Currency Act, R.S.C., 1985, c. C-52, § 8, <http://laws-lois.justice.gc.ca/eng/acts/c-52/page-1.html>, archived at <https://perma.cc/4A4E-3XBH>.

<sup>26</sup> *Digital Currency*, *supra* note 23.

currency.”<sup>27</sup> Accordingly, the use of cryptocurrency to pay for goods or services is “treated as a barter transaction.”<sup>28</sup> According to the Financial Consumer Agency,

[g]oods purchased using digital currency must be included in the seller’s income for tax purposes. GST/HST also applies on the fair market value of any goods or services you buy using digital currency.

...

When you file your taxes you must report any gains or losses from selling or buying digital currencies.<sup>29</sup>

On the issue of taxation, the Canada Revenue Agency adds that,

[w]here digital currency is used to pay for goods or services, the rules for barter transactions apply. A barter transaction occurs when any two persons agree to exchange goods or services and carry out that exchange without using legal currency. For example, paying for movies with digital currency is a barter transaction. The value of the movies purchased using digital currency must be included in the seller’s income for tax purposes. The amount to be included would be the value of the movies in Canadian dollars.<sup>30</sup>

On June 19, 2014, the Governor General of Canada gave his assent to Bill C-31 (An Act to Implement Certain Provisions of the Budget Tabled in Parliament on February 11, 2014, and Other Measures),<sup>31</sup> which includes amendments to Canada’s Proceeds of Crime (Money Laundering) and Terrorist Financing Act. The new law treats virtual currencies, including Bitcoin, as “money service businesses” for the purposes of the anti-money laundering law.<sup>32</sup> The Act is regarded as the “world’s first national law on digital currencies, and certainly the world’s first treatment in law of digital currency financial transactions under national anti-money laundering law.”<sup>33</sup>

only legal currency, and that the Banco de la República has the exclusive authority to issue money in Colombia.<sup>41</sup> According to the SF, cryptocurrencies have no value under capital market laws and therefore are also not recognized as a security.<sup>42</sup> The SF warned controlled financial institutions that they are not authorized to protect, invest, broker, or manage virtual money operations.<sup>43</sup> The SF called on persons to become informed and assume the risks related to virtual currencies if they choose to trade them, since these currencies do not have any private or state guarantee.<sup>44</sup>

## Costa Rica

The Central Bank of Costa Rica and its decentralized agencies (*órganos de desconcentración máxima*) issued a statement in October 2017 to participants in the financial, stock, securities, insurance, and pension markets, and to exchange houses, remittance agencies, the economic sector, and the general public, warning them about the risks associated with the acquisition of cryptocurrencies with the intention of using them either as financial savings or as a means of payment in Costa Rica. The statement explained that articles 42-51 of the Organic Law of the Central Bank establishes the colón as the monetary currency in Cost Rica. The statement also asserted that the Law designates the Central Bank as the sole issuer of bills and coins and establishes the unlimited power of the colón to liquidate all kinds of pecuniary obligations, both public and private. Due to this, the statement said, Bitcoin and similar cryptocurrencies are not recognized as legal tender in the country and do not have the backing of the Central Bank or the state of Costa Rica. Moreover, cryptocurrencies' effectiveness or use as a means of payment in the economy of the country cannot be guaranteed, nor can any person be forced to accept them as a means of payment for the transaction of goods and services.

The statement also asserted that because cryptocurrencies are not issued by a foreign central bank, they cannot be considered a foreign currency under the monetary exchange regime, and for this reason they do not have the security offered by the free currency convertibility provisions of articles 48 and 49 of the Organic Law of the Central Bank.

In the statement, the Central Bank and its decentralized agencies emphasized that they do not in any way regulate or supervise cryptocurrencies as a means of payment; moreover, they emphasized that transactions with cryptocurrencies cannot be made through the National System of Electronic Payment (SINPE) used in Costa Rica.

The statement warned that if any financial entity becomes directly or indirectly involved with its customers in the commercialization or use of any of these digital assets, such operation are undertaken at the financial entity's own risk and responsibility, as well as that of its customers. The statement added that the foregoing is in accordance with the obligation established by

<sup>41</sup> *Id.*

<sup>42</sup> *Id.*

<sup>43</sup> *Id.*

<sup>44</sup> *Id.*

prudential regulations on the prevention of money laundering and the financing of terrorism, which imposes a duty on financial entities to carry out the necessary risk analysis with respect to new technologies.

The statement reiterated that any person who acquires digital currencies, either as a form of savings or with the interest of using them as means of payment, and those who accept them with this function in commercial transactions, also do so at their own risk and responsibility, warning that they will be participating in operations not contemplated by the banking regulations or the payment mechanisms authorized by the Central Bank of Costa Rica. The statement concluded by saying that the warnings it contains are not limiting and do not exclude other risks inherent in the use of digital currency, and that the Central Bank will continue to study the issue.<sup>45</sup>

## **Ecuador**

The Central Bank of Ecuador has stated that Bitcoin is not an authorized payment method in Ecuador.<sup>46</sup> It further clarified that the bitcoin, as a cryptocurrency, is not backed by any authority, because its value is based merely on speculation.<sup>47</sup> Furthermore, financial transactions with bitcoins are not controlled, supervised, or regulated by any Ecuadoran entity, and therefore they represent a financial risk for those who invest in them.<sup>48</sup>

The Central Bank also stated, however, that the purchase and sale of cryptocurrencies such as bitcoin through the internet are not forbidden,<sup>49</sup> but it reiterated that bitcoin is not legal tender and is not an authorized payment method for goods and services according to the Código Orgánico Monetario y Financiero (Organic Monetary and Financial Code).<sup>50</sup>

## **El Salvador**

The Central Reserve Bank of El Salvador issued a statement on November 6, 2017, expressing its position on cryptocurrencies, which can be summarized as follows:

---

<sup>45</sup> Press Release, Banco Central de Costa Rica, Posición del Banco Central de Costa Rica (BCCR) y sus Órganos de Desconcentración Máxima (ODM) con Respecto a las Criptomonedas (Oct. 9, 2017), [http://www.bccr.fi.cr/noticias/historico/2017/Posicion\\_bccr\\_criptomonedas.html](http://www.bccr.fi.cr/noticias/historico/2017/Posicion_bccr_criptomonedas.html), archived at <https://perma.cc/KD4P-WXX8>.

<sup>47</sup> *Id.*

<sup>48</sup> *Id.*

<sup>49</sup> *Id.*

<sup>50</sup> CÓDIGO MONETARIO Y FINANCIERO [MONETARY AND FINANCE CODE] art. 94, REGISTRO OFICIAL [R.O.], Sept. 12, 2014, [http://www.asambleanacional.gob.ec/es/system/files/ro\\_codigo\\_organico\\_monetario\\_y\\_financiero.pdf](http://www.asambleanacional.gob.ec/es/system/files/ro_codigo_organico_monetario_y_financiero.pdf), archived at <https://perma.cc/M63F-4ZRG>.

- At the international and national level there is a discussion about the use of cryptocurrencies.
- Cryptocurrencies are not legal tender in any jurisdiction; they, unlike the conventional currencies issued by a monetary authority, are not controlled or regulated and their price is determined by the supply and demand of their market.
- In accordance with articles 36–37 of the Organic Law of the Central Reserve Bank of El Salvador, and articles 3 and 6 of the Monetary Integration Law of El Salvador, the colón and the United States dollar are the only unrestricted legal tender that can be used for the payment of monetary obligations in the national territory.
- Any transaction that is made with virtual currency is the responsibility and risk of the person who carries it out.
- Fundraising using digital currencies is prohibited. According to article 184 of the Banking Law, all public fundraising with or without advertising, and in any form, is prohibited by those who are not authorized in accordance with the Banking Law, or other laws in force that regulate fundraising.
- According to the Central Reserve Bank, as the monetary authority, regulator of the financial system, and watchdog of payment systems, there is currently no legal or regulatory framework applicable to cryptocurrencies or their equivalents.
- The Central Reserve Bank will remain vigilant on this and other related issues.<sup>51</sup>

## Guatemala

In December 2017 the acting President of the Bank of Guatemala, Sergio Recinos, confirmed that both Bitcoin and other types of cryptocurrencies are not legal tender in the country and do not have regulatory backing. He stated that according to Guatemalan legislation, the quetzal is the national currency and the Bank of Guatemala is the only issuer of bills and coins within the national territory, in accordance with articles 1 and 2 of the Monetary Law (*Ley Monetaria*). In this sense, virtual currencies are not recognized as a currency in Guatemala and neither are they recognized as foreign currency; therefore, they do not constitute a means of legal payment. Recinos added that due to their anonymous origin, cryptocurrencies can easily be used for illicit activities, such as money laundering, terrorism, drug purchases, and tax evasion, among others, to a degree that could be higher than with cash. Moreover, he said that cryptocurrencies are exposed to cyberattacks or hacking, which could lead to irreversible loss for the user. Lastly, Recinos warned that cryptocurrencies are not backed by any government and do not depend on a central bank issuer; therefore, no one is trying to maintain their value over time. He recommended that persons carefully examine the issue before deciding to invest in cryptocurrencies.<sup>52</sup>

## Honduras

In January 2018, the Honduran Central Bank issued a statement in response to inquiries made by economic and financial agents in relation to the use of cryptocurrencies within the national territory, either as an investment or as a means of payment for goods and services. The response stated that cryptocurrencies such as bitcoin, ethereum, litecoin, and other similar cryptocurrencies do not have the backing of the Central Bank of Honduras. Therefore, the Central Bank does not regulate or guarantee their use and such cryptocurrencies do not enjoy the legal protection granted by the laws of the country in terms of the payment system. As a result, any transaction that is made with this type of currency or virtual assets is the responsibility and risk of the person who conducts the transaction, the statement said.<sup>53</sup>

## Mexico

Mexico's Law to Regulate Financial Technology Companies, enacted in March 2018, includes a chapter on operations with "virtual assets," commonly known as cryptocurrencies.<sup>54</sup> This chapter defines virtual assets as representations of value electronically registered and utilized by the public as a means of payment for all types of legal transactions, which may only be transferred electronically.<sup>55</sup>

In addition, Mexico has enacted a law extending the application of its laws regarding money laundering to virtual assets, thereby requiring financial institutions that provide services relating to such assets to report transactions exceeding certain amounts.<sup>56</sup>

Mexico's Central Bank is granted broad powers under the Law to regulate virtual assets, including

- specifying those virtual assets that financial companies are allowed to operate with in the country, defining their particular characteristics, and establishing the conditions and restrictions applicable to transactions with such assets; and
- authorizing financial companies to perform transactions with virtual assets.<sup>57</sup>

<sup>57</sup> Ley para Regular las Instituciones de Tecnología Financiera [Law to Regulate Financial Technology Companies] arts. 30–32, 88.

Pertinent regulations applicable to these assets must be issued by Mexico's Central Bank within a year from the enactment of the Law.<sup>58</sup>

Financial companies that carry out transactions with virtual assets must disclose to their clients the risks applicable to these assets.<sup>59</sup> At a minimum, these companies must inform their clients, in a clear and accessible manner on their respective websites or through the means that they utilize to provide services, of the following:

- A virtual asset is not a legal currency and is not backed by the federal government nor by Mexico's Central Bank;
- Once executed, transactions with virtual assets may be irreversible;
- The value of virtual assets is volatile; and
- Technological, cybernetic, and fraud risks are inherent in virtual assets.<sup>60</sup>

## Venezuela

Under Decree 3196 of December 8, 2017,<sup>61</sup> the government of Venezuela was authorized to create its own cryptocurrency, the petro, which would be physically backed by Venezuelan barrels of oil.<sup>62</sup> One petro would be backed by a purchase-sale contract for one barrel of Venezuelan oil as quoted in the OPEC Reference Basket, as well as other commodities, including gold, diamond, coltan, and gas.<sup>63</sup>

Decree 3196 mainly provides for the operational details of the petro, including its issuance, mining, and trading in Venezuela according to the rules on purchase and sale contained in the Civil Code.<sup>64</sup> According to a legal expert on information technology law, all cryptocurrencies are considered a financial asset subject to the rules applicable to such assets under Decree 3196 and none of its provisions declare them illegal.<sup>65</sup> The Decree also creates the Superintendencia de los

<sup>61</sup> Decreto 3196 Mediante el cual se Autoriza la Creación de la Superintendencia de los Criptoactivos y Actividades Conexas Venezolana [Decree 3196 Authorizing the Creation of the Venezuelan Superintendency of Cryptoassets and Related Activities], GACETA OFICIAL [G.O.], Dec. 8, 2017, <http://gacetaoficial.tuabogado.com/gaceta-oficial/decada-2010/2017/gaceta-oficial-6346-del-8-diciembre-2017>, archived at <https://perma.cc/CSC3-BKBV>.

<sup>62</sup> *Id.* art. 4.

<sup>63</sup> *Id.*

<sup>64</sup> *Id.* art. 3.

<sup>65</sup> Raymond Orta, *Efectos sobre el Bitcoin y otras Criptomonedas del Decreto sobre Creación del PETRO y la Superintendencia de los Criptoactivos* [Effects of Decree Creating the PETRO and the Superintendency of Crypto Assets on Bitcoin and other Cryptocurrencies], TUABOGADO.COM (Dec. 28, 2017), <http://www.tuabogado.com/venezuela/secciones/derecho/informatico/efectos-sobre-el-bitcoin-y-otras-criptomonedas-del-decreto-sobre-creacion-del-petro-y-la-superintendencia-de-los-criptoactivos-raymondorta>, archived at <https://perma.cc/3RU6-ANVU>.

Criptoactivos y Actividades Conexas Venezolana (Superintendency of Venezuelan Crypto-Assets and Related Activities) as the supervisory authority of cryptocurrencies.<sup>66</sup>

Decree 3196 states that the holder of petro will be able to exchange the market value of the cryptoasset for the equivalent in another cryptocurrency or in bolívares (the traditional currency of Venezuela) at the market exchange rate published by a national cryptoasset exchange house.<sup>67</sup> The holder of each petro would also own a virtual wallet, which was to be his/her own responsibility, along with the risks related to its custody and management.<sup>68</sup>

According to Decree 3196, an initial coin offering will be made through auction or direct assignment by the Superintendence of Cryptoassets and Related Venezuelan Activities.<sup>69</sup>

On March 8, the Asamblea Nacional (National Assembly, the Venezuelan Congress), declared that the issuance of a domestic cryptocurrency such as the petro is illegal, because in order to enter into a public debt and borrow on behalf of the Venezuelan government, congressional approval and a special law is required under the National Constitution.<sup>70</sup> In addition, only the Central Bank of Venezuela may issue national currency.<sup>71</sup> The Asamblea Nacional further stated that oil reserves are public national assets that belong to the Republic and are non-transferrable assets, and therefore cannot be used as guarantee for any debt.<sup>72</sup>

Despite these declarations by the Asamblea Nacional, the Government has said the petro will become legal tender for all transactions involving government institutions within 120 days of April 9, 2018.<sup>73</sup>

## The Caribbean

### I. Eastern Caribbean Central Bank

The Eastern Caribbean Central Bank (ECCB) is the monetary authority for eight island economies in the Eastern Caribbean Currency Union that use a common currency known as the Eastern Caribbean dollar<sup>74</sup>—Anguilla, Antigua and Barbuda, the Commonwealth of Dominica, Grenada, Montserrat, Saint Kitts and Nevis, Saint Lucia, and Saint Vincent and the Grenadines.<sup>75</sup> On March 9, 2018, the ECCB signed a memorandum of understanding with the Barbados-based financial technology company Bitt Inc. agreeing to participate in a pilot program that will enable it to issue a digital currency. Expected to start at the end of 2018, the pilot will specifically involve

the development of a digital Eastern Caribbean Dollar using distributed ledger technology with a blockchain platform specifically designed for a safe and secure digital financial ecosystem. Essentially, [it] would be a proof of concept, designed to demonstrate the viability and functionality of the ECCB issuing Digital Eastern Caribbean Dollars.<sup>76</sup>

The ECCB will work closely with Bitt Inc. to

develop, deploy and test technology which focuses on data management, compliance and transaction monitoring system for Know Your Customer, Anti-Money Laundering, and Combating the Financing of Terrorism. . . . The pilot will also focus on developing a secure, resilient digital payment and settlement platform with embedded regional and global compliance; and the issuance of a digital EC [Eastern Caribbean] currency which will operate alongside physical EC currency.<sup>77</sup>

While this summarizes the regional effort to adopt a common digital currency, national efforts by ECCB member states to deal with emerging cryptocurrencies are discussed below, along with the efforts of other Caribbean countries that are not participating in the ECCB pilot.

## II. Country Surveys

### Anguilla

The Anguillan government announced at the end of 2017 that it would introduce legislation, known as the Anguilla Utility Token Offering Act (the AUTO Act), to regulate initial offerings of certain types of cryptocurrencies (ICOs).<sup>78</sup> The government has noted that some types of tokens are considered to be securities, and thus are already regulated under the existing securities framework,<sup>79</sup> but that

there remained a large swath of non-security tokens with no clear guidance as to where they would fit in the emerging blockchain economy. Therefore, we focused our efforts on creating a safe and effective regulatory framework for non-security token offerings, which appear to represent a majority of the current capital raising activity within the blockchain community.<sup>80</sup>

The new legislation will serve to provide a regime for Anguillan entities to register in order to conduct an offering of non-security tokens, which are tokens that do not have the same features securities do, but that “have one or more ‘utility’ features within the issuer’s current or proposed blockchain platform.”<sup>81</sup>

The AUTO Act is structured in a way to regulate utility tokens, while avoiding the burden imposed by securities regulations and the “higher levels of regulatory scrutiny that would have to take place were the tokens to fall under securities laws.”<sup>82</sup> As such, utility tokens are categorized as those that may be redeemed for consumer goods or services, rather than a share in profits or an interest in technology connected to the offering.<sup>83</sup>

---

<sup>78</sup> Lonnie Hobson, *The Government of Anguilla Announces World’s First Cryptocurrency Registration Process for “Utility Token Offerings”*, LINKEDIN (Nov. 15, 2017), <https://www.linkedin.com/pulse/government-anguilla-announces-worlds-first-process-utility-hobson/>.

<sup>79</sup> Securities Act, cap. S13, REVISED STATUTES OF ANGUILLA, at 3, <http://www.gov.ai/laws/S013-00-Securities%20Act/>. Section 1 of the Securities Act defines “securities” as “shares and stock in the share capital of a company; (b) any instrument creating or acknowledging indebtedness which is issued or proposed to be issued by a company including, in particular, debentures, debenture stock, loan stock, bonds and notes; (c) bonds and other instruments creating or acknowledging indebtedness issued by or on behalf of any Participating Government; (d) any right (whether conferred by warrant or otherwise) to subscribe for shares or debt securities (e) any option to acquire or dispose of any other security; (f) units in a collective investment scheme, including shares in or securities of an investment company; and (g) any other instruments prescribed to be securities for the purposes of this Act.”

<sup>80</sup> *Government of Anguilla Announces Regulatory Framework for Non-Security Token Offerings*, ECONOTIMES (Nov. 14, 2017), <https://www.econotimes.com/Government-of-Anguilla-announces-regulatory-framework-for-non-security-token-offerings-1005960>, archived at <https://perma.cc/P87S-AC86>.

<sup>83</sup> *Id.*

In order to become registered, the entity must put together a “white paper,” along with its disclosure documents, which must undergo a technical and legal review that must include information about the companies structure, location, business status, description of the project, a technical and legal description of the tokens that will be offered, how any proceeds made will be used, and anti-money laundering provisions along with any risk factors present for purchasing the tokens.<sup>84</sup> The Anguillan government will financially benefit from the legislation by collecting a registration fee, along with a “1.5 percent levy on the total amount raised by a token offering.”<sup>85</sup>

The government of Anguilla has stated as follows:

We believe this new AUTO Act will help Anguilla become the leader in establishing best practices for cryptocurrency offerings, to protect the people of Anguilla and the participating public. . . . We believe the AUTO Act would be a significant step in the right direction, to provide clearly defined rules and increased safety for the blockchain community.<sup>86</sup>

On December 13, 2017, the Executive Council of Anguilla stated that officials should formulate a regulatory regime for Utility Token Offerings that would be submitted to the Governor.<sup>87</sup> No further information about the status of this bill has been located.

Anguilla has also signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside the country’s national currency (see ECCB discussion, *supra*).

### **Antigua and Barbuda**

Antigua and Barbuda currently does not have any legislation that specifically regulates the use of cryptocurrency. Newspapers on Antigua and Barbuda have reported that the government of Antigua has instructed its Attorney General to “draft laws for the implementation of bitcoin.”<sup>88</sup> No specifics or further information on this reported proposed legislation was located.

The government of Antigua and Barbuda has reportedly permitted the funding of projects and charities in the country through an Initial Coin Offering for Development<sup>89</sup> by selling a state-

supported (not state-sponsored) Antigua and Barbuda Development Coin, based on the Ethereum cryptocurrency.<sup>90</sup> No further information on this offering via a government source was located.

Antigua and Barbuda has signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside the country's national currency (see ECCB discussion, *supra*).

## **Bahamas**

The Bahamas does not have any legislation that specifically applies to cryptocurrencies. Regulation of cryptocurrencies in the Bahamas currently varies according to whether the currency is considered to be a security, currency, or commodity.<sup>91</sup> Despite not having legislation specifically designed to address cryptocurrencies, the Central Bank of the Bahamas has stated that regulations it issued in 2017, which provide a framework for a system of national electronic payments services, also apply to cryptocurrencies.<sup>92</sup> The regulations “apply best international standards for the provision of local payments services” and define “electronic money” as

electronically stored monetary value as represented by a claim on the issuer, which is issued on receipt of funds for the purpose of making payment transactions and which is accepted as a means of payment by persons other than the issuer, and includes monetary value stored magnetically or in any other tangible or intangible device (such as a SIM card or software).<sup>93</sup>

The Central Bank further stated that converting instruments in and out of the Bahamian currency would be governed by Exchange Control Regulations, and that “[t]he Securities Commission of The Bahamas would reserve the right to supervise any non-payments aspect of crypto currency operations domiciled in The Bahamas.”<sup>94</sup>

The Bahamas is actively looking at developing blockchain technology to use on the Island to help create efficient and simplified transactions. Specifically, the government has noted that “[t]he

<sup>92</sup> Remarks by John Rolle, Governor of the Central Bank of the Bahamas, at Blockchain Seminar, Digital Currency – Extending the Payments System Modernisation Initiative (Mar. 1, 2018), <http://www.centralbankbahamas.com/download/031486300.pdf>, archived at <https://perma.cc/XUH7-3C83>.

<sup>93</sup> Payment Instruments Oversight Regulations 2017, SI 53/2017, art. 2, EXTRAORDINARY OFFICIAL GAZETTE OF THE BAHAMAS (July 26, 2017), [http://laws.bahamas.gov.bs/cms/images/LEGISLATION/SUBORDINATE/2017/2017-0053/PaymentInstrumentsOversightRegulations2017\\_1.pdf](http://laws.bahamas.gov.bs/cms/images/LEGISLATION/SUBORDINATE/2017/2017-0053/PaymentInstrumentsOversightRegulations2017_1.pdf), archived at <https://perma.cc/B5VG-5222>.

<sup>94</sup> Remarks by John Rolle, *supra* note 92.

Bahamas is also currently developing programs for block chain-based solutions, fin-tech and crypto-currency companies, and we intend to promote block chain as a sub-industry within ICT.”<sup>95</sup>

The Bahamas is in the process of considering a bill that would bring virtual currencies within the ambit of the proceeds of crime legislation.<sup>96</sup> Clause 2 of the bill defines “virtual currency” as

a digital representation of value which can be digitally traded and functions as – (a) a medium of exchange; (b) a unit of account; or (c) a store of value, that does not have legal tender status or carry any security or guarantee in any jurisdiction.<sup>97</sup>

If enacted, the bill’s provisions on money laundering and counterterrorism financing would apply to cryptocurrencies.<sup>98</sup>

It also appears that the Bahamas might act to both bring cryptocurrency exchanges within the remit of the Central Bank of the Bahamas and introduce a “digital version of the Bahamian dollar.”<sup>99</sup>

## Barbados

Barbados does not appear to have any laws that specifically regulate cryptocurrencies. In 2015, the Central Bank of Barbados (CBB) issued a paper that discussed whether cryptocurrencies should be included in its portfolio of international reserves, but it does not appear to have acted to do this.<sup>100</sup>

Barbados is home to Bitt Inc., the financial technology startup that has signed a Memorandum of Understanding with the ECCB to launch a pilot of blockchain technology, which will enable eight Caribbean countries to test the use of cryptocurrencies alongside their national currencies (see ECCB discussion, *supra*). While Barbados is not a party to this Memorandum of Understanding, there have been reports that Bitt Inc. is to create a digital Barbadian dollar that would be tied to the value of the country’s physical currency, but the government has not yet issued a statement on this subject.<sup>101</sup>

## British Virgin Islands

The British Virgin Islands has yet to issue any guidance that applies to cryptocurrency and does not appear to have legislation or regulations that specifically apply to this area,<sup>102</sup> with the government instead appearing to opt for a wait-and-see approach.<sup>103</sup> One commentator has noted that its existing laws appeal to companies that wish to do initial coin offerings (ICOs), and a number of companies have already registered under the country's company laws and then conducted ICOs.<sup>104</sup>

## Cayman Islands

The Cayman Islands appear to have a fairly flexible regulatory environment for cryptocurrencies and blockchain technologies. While there appears to be no specific legislation geared towards regulating cryptocurrencies, there are laws that in certain circumstances may be applicable. These include the Securities Investment Business Law (2015 Revision),<sup>105</sup> Anti-Money Laundering (AML) Laws and regulations,<sup>106</sup> Money Services Law (2010 Revision),<sup>107</sup> and Electronic Transactions Law (2003 Revision). Lawyers Chris Humphries and James Smith predict that

more-specific legislation will eventually be created although, for the time being, the regulators and lawmakers in the Cayman Islands are keen to avoid rushing through any legislation before the potential benefits and pitfalls of blockchain technology, cryptocurrencies and ICOs are properly understood.<sup>108</sup>

On January 29, 2018, Cayman Islands' Premier, Alden McLaughlin, reportedly spoke at a leading blockchain conference called "d10e" where he encouraged blockchain companies to establish themselves at Cayman Enterprise City, a "special economic zone that caters to tech-related

entities.”<sup>109</sup> Cayman Enterprise City CEO Charlie Kirkconnell stated at the conference that some fifty blockchain companies have established or are in the process of establishing themselves in the zone.<sup>110</sup>

### **Dominica**

On March 14, 2015, Dominica was reportedly scheduled to host an event, officially titled “The Bit Drop,” which was meant to put bitcoins into the hands of Dominica’s entire population, reported to be 70,000 people, but the project was cancelled.<sup>111</sup> According to *Dominica News Online*, organizers indicated that they did not receive enough support from the government on the event, and an election cycle may have “complicated matters.”<sup>112</sup>

More recently, Dominica signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside the country’s national currency (see ECCB discussion, *supra*).

### **Dominican Republic**

The Dominican Central Bank has indicated that virtual currencies are not backed by the Bank and are not legal currency under Dominican law.<sup>113</sup> Thus, financial institutions authorized to operate in the country may not engage in transactions that use these currencies, and individuals who acquire them or accept them as payment do so at their own risk.<sup>114</sup>

### **Grenada**

Grenada does not have any specific legislation to regulate cryptocurrencies. It has, however, signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside the country’s national currency (see ECCB discussion, *supra*).

### **Jamaica**

In a press release issued on February 5, 2018, the Bank of Jamaica warned the public to “exercise caution in the use of virtual currencies (cryptocurrencies) given the associated risks and the absence of appropriate governance and consumer protection arrangements,” according to the

*Jamaica Observer*.<sup>115</sup> While noting the advantages of virtual currencies in potentially promoting “financial inclusion,” the Bank warned that

. . . the following risks need to be taken into consideration:

1. Virtual currencies are not legal tender in Jamaica.
2. Bank of Jamaica neither issues nor backs virtual currencies.
3. Virtual currencies are not foreign currencies as there is no monetary authority that issues or backs them.
4. Bank of Jamaica does not regulate or supervise virtual currencies.
5. Bank of Jamaica has not authorised any entity to operate a virtual currency platform.
6. Transactions in virtual currencies, such as bitcoin, are susceptible to abuse by criminals and may facilitate money laundering and the financing of terrorism.<sup>116</sup>

### **Montserrat**

Montserrat does not have any specific legislation to regulate cryptocurrencies. It has, however, signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside its national currency (see ECCB discussion, *supra*).

### **Saint Kitts and Nevis**

Saint Kitts and Nevis does not have specific legislation to regulate cryptocurrencies. However, it has signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside the country’s national currency (see ECCB discussion, *supra*).

While the country has no specific legislation on the subject, the Saint Kitts and Nevis Citizenship by Investment Unit (CIU) reportedly issued a statement in June 2014 that it would not accept digital currency as a means by which applicants for citizenship through the Citizenship by Investment Program could participate in the program. “We further emphasize that we do not accept Bitcoins, have never accepted Bitcoins, and will not accept Bitcoins,” the CIU was quoted as saying.<sup>117</sup>

### **Saint Lucia**

Saint Lucia does not have specific legislation to regulate cryptocurrencies. However, it has signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside the country’s national currency (see ECCB discussion, *supra*).

## Saint Vincent and the Grenadines

Saint Vincent and the Grenadines does not have any specific legislation to regulate cryptocurrencies. It has, however, signed up to participate in the ECCB pilot, which will test the use of cryptocurrencies alongside its current national currency (see ECCB discussion, *supra*).

## Trinidad and Tobago

A February 24, 2018, news article reported that the Trinidad and Tobago Finance Ministry has distanced itself from a recent digital currency offering, and in clarifying its position emphasized in a statement that “[t]he Commission, has not as of this date approved any Initial Coin Offering.”<sup>118</sup> According to the article, the Commission’s statement also identified the following risks and urged the public to exercise caution:

- 1) Heightened potential for fraud – the fact that the products and those selling them may in some cases not be subject to regulation, [may] expose the investors to fraud;
- 2) Cross-border distribution risks – the issuer may be operating the ICO from outside of the investor’s jurisdiction, therefore, following the money in the event of a collapse of the ICO as well as recovering invested funds, may prove extremely difficult [for the investor];
- 3) Information asymmetry – investors may not be able to understand the risks, costs and expired returns . . . arising from their investment;
- 4) Liquidity risks – In some jurisdictions, cryptocurrency exchanges may also be unregulated and operate without oversight. Thus leaving investors vulnerable to dramatic price changes and possibility that they may not be able to exit their holdings (funds invested) . . . .

Based on the foregoing, the Ministry of Finance advises members of the public to exercise caution when engaging in any form of investment and when in doubt, seek the advice of the Regulatory Bodies – The Securities and Exchange Commission and/or the Central Bank of Trinidad and Tobago.<sup>119</sup>

## Europe

### I. EU Member States

#### European Union

On July 5, 2016, the European Commission presented a legislative proposal to amend the Fourth Anti-Money Laundering Directive (AMLD).<sup>120</sup> It suggested, *inter alia*, bringing custodian wallet providers and virtual currency exchange platforms within the scope of the AMLD, meaning they would be obligated to fulfill due diligence requirements and have in place policies and procedures to detect, prevent, and report money laundering and terrorist financing. The proposal contains a definition of virtual currencies, which are described as “a digital representation of value that is neither issued by a central bank or a public authority, nor necessarily attached to a fiat currency, but is accepted by natural or legal persons as a means of payment and can be transferred, stored or traded electronically.”<sup>121</sup> On January 29, 2018, the text agreed at the interinstitutional negotiations of the European Parliament and the Council was approved in committee. The European Parliament adopted the text in plenary session on April 19, 2018.<sup>122</sup> The updated Directive will enter into force three days after its publication in the Official Journal of the European Union.

Furthermore, on March 8, 2018, the European Commission presented an Action Plan on how to take advantage of the opportunities presented by technology-enabled innovation in financial services (FinTech), like blockchain, artificial intelligence, and cloud services.<sup>123</sup> The FinTech Action Plan includes the recently launched EU Blockchain Observatory and Forum, which will report on the challenges and opportunities of crypto assets later in 2018 and is working on a comprehensive strategy on distributed ledger technology and blockchain addressing all sectors of the economy.<sup>124</sup>

On October 22, 2015, the European Court of Justice (ECJ) held in its decision *Hedqvist* that transactions to exchange a traditional currency for bitcoin or other virtual currencies and vice versa

constitute the supply of services for consideration, but fall under the exemption from value-added-tax (VAT).<sup>125</sup> Buying or selling bitcoin is therefore exempt from VAT in all EU Member States.

On February 12, 2018, the European Supervisory Authorities for securities (ESMA), banking (EBA), and insurance and pensions (EIOPA) jointly issued a warning to consumers regarding virtual currencies, stating that they are “highly risky and unregulated products and are unsuitable as investment, savings or retirement planning products.”<sup>126</sup> The warning complements the earlier two statements by ESMA on initial coin offerings (ICOs) in November 2017<sup>127</sup> and a warning to consumers and two opinions on virtual currencies by EBA in December 2013, July 2014, and August 2016, respectively.<sup>128</sup> EBA welcomes the decision of the European Commission to bring custodian wallet providers and virtual currency exchange platforms within the scope of the Fourth AMLD and not to extend the EU Payment Services Directive 2015/2366 to virtual currency transactions for the time being.<sup>129</sup> EBA suggests a separate regulatory regime to mitigate all the risks arising from virtual currencies.<sup>130</sup>

The President of the European Central Bank (ECB), Mario Draghi, warned that bitcoin and other digital currencies are “very risky assets” due to their high volatility and speculative prices.<sup>131</sup> He stated that “digital currencies are not subject to a specific supervisory approach,” but that “[w]ork is under way in the Single Supervisory Mechanism<sup>132</sup> to identify potential prudential risks that

these digital assets could pose to supervised institutions.”<sup>133</sup> In addition, in December 2016, the ECB and the Bank of Japan (BOJ) launched a joint research project named “Stella,” which looks at the possible use of distributed ledger technology for financial market infrastructures.<sup>134</sup>

## Austria

The Austrian Ministry of Finance (Bundesministerium der Finanzen, BMF) does not qualify cryptocurrencies as legal tender or as financial instruments. Instead, it classifies them as other (intangible) commodities.<sup>135</sup> It stated that cryptocurrencies are treated like other business assets for income tax purposes. According to the Ministry, “mining” generally is a commercial activity and is therefore treated like any other production of goods. The same applies to the operation of online trading platforms and cryptocurrency ATMs.<sup>136</sup>

With regard to VAT, the BMF follows the jurisprudence of the ECJ in *Hedqvist*.<sup>137</sup> Transactions to exchange a traditional currency for bitcoin or other virtual currencies and vice versa are therefore exempt from VAT. Bitcoin or other virtual currencies that are used as a means of payment for services or goods are treated the same as traditional means of payment. Mining is not subject to VAT, because there is no identifiable recipient.<sup>138</sup>

The Austrian National Bank (Oesterreichische Nationalbank, OeNB) does not qualify bitcoin as a currency, because it does not fulfill the typical functions of money due to a strict limitation on quantity and no stabilizing central authority.<sup>139</sup> Bitcoin is currently not covered by the E-Money Act or the Payment Services Act.<sup>140</sup> Ewald Nowotny, governor of the OeNB, has pointed out the risks of cryptocurrencies.<sup>141</sup> He stated that “[b]itcoin & Co. . . . are highly speculative investments which entail high risks for individuals.” He therefore welcomed the initiative of the Federal Minister of Finance, Hartwig Löger, to establish a Fintech Regulation Council to regulate cryptocurrencies. In addition, he voiced support for the amendment of the EU Money Laundering

Directives, as well as the proposal of the Austrian Ministry of Finance to require prospectuses for ICOs and introduce licensing by the Financial Market Authority (FMA).<sup>142</sup> Finally he added that any regulatory initiative should be complemented by improving the financial education of the public.

Like the OeNB, the FMA has warned investors of the risks of cryptocurrencies.<sup>143</sup> It stated that virtual currencies like bitcoin and trading platforms are neither regulated nor supervised by the FMA. The FMA does not qualify them as legal tender payment instruments or as tradable foreign currencies. However, it pointed out that certain business models might require authorization from the FMA.<sup>144</sup> The FMA decides on a case-by-case basis whether an ICO requires authorization.<sup>145</sup>

## Belgium

Cryptocurrencies remain unregulated in Belgium, and there appear to have been very few official pronouncements on the subject.

In January 2014, the Belgian National Bank (Banque nationale de Belgique, BNB) and the Financial Services and Markets Authority (Autorité des services et marchés financiers, FSMA) issued a joint press release warning consumers about the risks of cryptocurrencies.<sup>146</sup> Their main points were that cryptocurrencies are not legal tender, and that they are completely unregulated and do not fall within the purview of any monitoring or regulatory authority.<sup>147</sup> More recently, in December 2017, the governor of the BNB, Jan Smets, repeated in an interview that bitcoin is not an actual currency, as it is not guaranteed by a central bank or a government as a means of payment.<sup>148</sup>

The Belgian Finance Minister, in response to a question by a Belgian senator, stated in July 2013 that while bitcoin seems to be somewhat problematic as a tool for money laundering and other

<sup>148</sup> Joseph Young, *Belgium Central Bank Governor: Bitcoin Is Not a Threat Because Its Not "Stable,"* CNN (Dec. 23, 2017), <https://www.cnn.com/belgium-central-bank-governor-bitcoin-is-not-a-threat-because-its-not-stable/>, archived at <https://perma.cc/G6Y8-CC4N>.

illegal activities, such problems should not be overstated.<sup>149</sup> He also said that, based on studies by the BNB and the European Central Bank, bitcoin does not present any significant risks to price stability, to the financial system in general, or to its individual users. Finally, in this same statement, the Minister of Finance indicated that government intervention with regard to bitcoin does not appear necessary given how small the bitcoin market was at the time.<sup>150</sup>

In April 2017, Belgian Minister of Justice Koen Geens announced that he plans to establish a legal framework for cryptocurrencies.<sup>151</sup> One of the Minister's main objectives is to set up a mechanism to verify the conversion and exchange rates of cryptocurrencies, similarly to what exists for traditional financial circuits.<sup>152</sup> He also would like to better monitor those who promise unrealistic returns and conversion rates, as well as find ways around the anonymity of cryptocurrency payments so as to curtail their use as vehicles for money laundering. Additionally, Geens would like to establish a mechanism for the courts to properly evaluate cryptocurrencies when they are seized as part of criminal investigations.<sup>153</sup> This plan seems to be mostly aspirational, and no action appears to have been taken in furtherance of it so far.

## **Bulgaria**

On February 14, 2018, the National Bank of Bulgaria announced that it joins the position of the European supervisory authorities on the risks inherent in buying virtual currencies. The Bank noted that such currencies show extreme price volatility and signs of a pricing bubble.<sup>154</sup> According to the Bank, consumers buying virtual currencies should be aware that there is a high risk that they will lose a large amount, or even all, of the money invested.<sup>155</sup>

Bulgarian tax authorities reportedly issued rulings in 2014 requiring individuals to pay taxes on gains from selling cryptocurrencies, similar to the sale of financial assets.<sup>156</sup>

In 2015 a Bulgarian court reportedly concluded that activities associated with buying, selling, and paying with cryptocurrencies are not subject to licensing requirements.<sup>157</sup>

## Croatia

On December 18, 2017, Croatia's Financial Stability Council warned that individuals investing in virtual currencies bear sole responsibility for their losses and should be aware of possible taxation.<sup>158</sup> It stated that Croatian regulators are not responsible for the oversight of the individuals who issue virtual currencies or trade in them. The Council noted that virtual currencies are associated with considerable risks, such as those of digital wallet theft and transaction misuse, fraud, etc. A similar warning was issued by the National Bank of Croatia on September 22, 2017.<sup>159</sup>

## Cyprus

The Central Bank of Cyprus has issued a warning stating that virtual currencies are not legal tender, that there are no specific regulatory protection measures to cover losses from their use, and that their prices are subject to volatility.<sup>160</sup>

## Czech Republic

On February 27, 2018, Mojmír Hampl, the Vice-Governor of the Czech National Bank (CNB) made the following statement:

The fact that cryptocurrencies are . . . commodities [rather than currencies] also shapes our light-touch, liberal approach to regulation at the CNB. We do not want to ban them and we are not hindering their development, but we are also not actively helping or promoting them and we are not protecting them or the customers that use them. Like in a casino, everyone investing in a cryptocurrency must be prepared to lose the entire bet. And central banks do not regulate casino visits.<sup>161</sup>

Amendments have been made to the Czech Republic’s anti-money laundering legislation, making it also applicable to persons providing services related to virtual currencies—i.e., those who buy, sell, store, manage, or mediate the purchase or sale of virtual currencies or provide other services related to such currencies as a business.<sup>162</sup>

## Denmark

Denmark has no laws specifically addressing cryptocurrencies, and no regulatory proposals on cryptocurrencies are pending in the Danish Parliament. However, government agencies have issued a number of statements on cryptocurrencies.<sup>163</sup>

Denmark’s Finanstilsynet (Financial Supervisory Authority) issued a statement in 2013 rejecting the bitcoin as a currency and stating that it will not regulate bitcoin use.<sup>164</sup> In its statement the Financial Supervisory Authority emphasized that it has evaluated the use of the bitcoin system and found that it does not fall under any of the financial services categories, including the issuing of electronic money, payment for services, currency exchanges, or the issuing of mortgages; thus, bitcoin activity is not covered under current financial regulations.<sup>165</sup> In 2017 the Financial Supervisory Authority released a report on ICOs (Initial Coin Offerings) in which it stated that cryptocurrencies that are solely used as a means of payment continue to not be regulated by the Authority.<sup>166</sup> However, ICOs may be conducted in such a way as to fall under the purview of the Authority<sup>167</sup> and thus would be subject to Danish regulation—for example, “legislation on alternative investment funds, prospectuses, and money laundering.”<sup>168</sup>

The Danish Central Bank has been critical of cryptocurrencies. In 2014, it issued an initial statement declaring that bitcoin is not a currency.<sup>169</sup> According to the statement, “[b]itcoin does not have any real trading value compared to gold and silver, and thus is more similar to glass

beads.”<sup>170</sup> The Danish Central Bank went on to point out that bitcoins are not protected by any national laws or guarantees, such as a deposit guarantee.<sup>171</sup> Similarly, in a 2014 document the Danish Central Bank discussed virtual currencies, determining that virtual currencies are not regulated and therefore associated with high risks to consumers.<sup>172</sup> In 2017 the Director of the Danish Central Bank issued warnings against the use of bitcoin.<sup>173</sup> His critique of cryptocurrencies was reiterated in 2018.<sup>174</sup> In addition, the Danish Central Bank has made it clear that it is not in favor of the creation of an official Danish e-currency (issued by the Central Bank), unlike neighboring Sweden.<sup>175</sup>

SKAT (the Danish Tax Authority) has issued a number of statements on virtual and cryptocurrencies. For example in 2014 it published a binding reply (a response to a public question from a taxpayer that is binding on the interpretation of the Tax Authority) in which it declared that an invoice amount cannot be issued in bitcoins, but must be issued in Danish kroner or another recognized currency.<sup>176</sup> The Authority went on to state that any bitcoin losses cannot be deducted as a cost of doing business when bitcoins are used as a means of payment.<sup>177</sup> In 2016 the Authority discussed cryptocurrencies in relation to value-added tax (VAT) and found that cryptocurrencies are exempt from VAT.<sup>178</sup> The determination is consistent with the decision of the Court of Justice of the European Union in 2015.<sup>179</sup> The Authority has also commented on how the mining of

bitcoins should be treated from a VAT tax perspective.<sup>180</sup> The case involved a Danish person who wanted to sell hashing capacity on the electrical grid, an activity that was subject to VAT.<sup>181</sup>

The Danish Tax Council in 2018 declared that losses on sales of bitcoins purchased as an investment are tax deductible and that profits are subject to income taxation.<sup>182</sup>

## Estonia

On November 27, 2017, Estonia enacted amendments to its anti-money laundering legislation<sup>183</sup> that define cryptocurrencies (virtual currencies) as value represented in digital form that is digitally transferable, preservable, or tradable and that natural persons or legal persons accept as a payment instrument, but that is not the legal tender of any country or funds (banknotes or coins, scriptural money held by banks, or electronic money). The anti-money laundering legislation now also applies to providers of a service for exchanging virtual currency with fiat currency and providers of a virtual currency wallet service, which is defined as a service in which keys are generated for customers or customers' encrypted keys are kept, which can then be used for the purpose of keeping, storing, and transferring virtual currencies.<sup>184</sup> Virtual currency service providers are required to have a license.<sup>185</sup>

## Finland

Finland does not have specific regulations that deal with cryptocurrencies and there is no proposed legislation on cryptocurrencies pending in the Finnish Parliament. However, a number of agencies have issued advisory statements on how they view cryptocurrencies.

The Finnish Financial Supervisory Authority issued an advisory in 2017 that cryptocurrencies are risk-filled investment alternatives.<sup>186</sup> It also noted that, depending on the initial coin offering (ICO), there may be regulatory effects of the purchase—for instance, EU rules on alternative

<sup>184</sup> *Id.* § 2.

<sup>185</sup> *Id.* § 70.

<sup>186</sup> Press Release, Finansinspektionen, Finansinspektionens varning: kryptovalutor och ICO:s (Initial Coin Offering) är riskfyllda investeringsobjekt [Financial Supervisory Authority's Warning: Cryptocurrencies and ICOs Are Risk Filled Investment Objects] (Nov. 22, 2017), [http://www.finanssivalvonta.fi/se/Publicerat/pressmeddelanden/Pages/17\\_2017.aspx](http://www.finanssivalvonta.fi/se/Publicerat/pressmeddelanden/Pages/17_2017.aspx), archived at <https://perma.cc/V3WG-CBAW>.

investment funds.<sup>187</sup> In 2017 the Finnish Supervisory Authority also discussed the future of ICOs in a blog post.<sup>188</sup>

The Central Bank of Finland issued a statement in 2014 declaring that cryptocurrencies, especially bitcoin, are inherently associated with risks, noting that “[t]he use of Bitcoin is not currently supervised or regulated in any way,”<sup>189</sup> nor does it not amount to a payment service as defined in the Payment Services Act.<sup>190</sup> In a 2017 report published by the Central Bank, Central Bank affiliates were more positive, reportedly calling bitcoin “revolutionary” and “apparent[ly] functio[nal] and useful.”<sup>191</sup>

The Finnish Tax Authority (Vero Skatt) issued instructions for the income taxation of virtual currencies, including bitcoin, in 2013.<sup>192</sup> When transferred to another currency, the rules on taxation of capital gains apply, the Tax Authority said. When the currency is used as a form of payment for goods and services it is treated as a trade and the increase in value that the currency might have gained after it was obtained is taxable.<sup>193</sup> The sale of bitcoins at a loss in value compared to the original purchase price is not deductible under the Finish Income Taxation Act, because such a loss in value is not specifically described as deductible in the Act.<sup>194</sup> In 2017 the Tax Authority issued additional recommendations, stating that the exchange rate is determined at the time of realization of the bitcoin (i.e., when it becomes cash), and that cryptocurrency records should be kept for six years.<sup>195</sup>

Sales of bitcoins have reportedly resulted in millions in revenue for the Finnish Tax Authority.<sup>196</sup> The Tax Authority has monitored both those who trade and those who use cryptocurrencies.<sup>197</sup>

The Åbo Appeals Court is reported to have found that Finnish Customs may auction off bitcoins it has confiscated in relation to drug crimes, and as of February 2018 such bitcoins were estimated to be worth €19 million (approximately US\$23.5 million).<sup>198</sup> The Finnish government is said to have issued guidelines on how to store confiscated bitcoins.<sup>199</sup>

## France

Cryptocurrencies remain largely unregulated in France, with two ordinances on blockchain technology being the only legislative action taken so far. However, the French government is actively moving towards establishing a regulatory regime.

A 2016 ordinance included two provisions that allowed the use of blockchain technology for a specific type of zero-coupon bond called a “mini-bond” (*minibon*).<sup>200</sup> The main impact of this ordinance was to provide the first definition of blockchain in French law, but otherwise these provisions only had a very narrow application. Another ordinance, from December 2017, went further and will make it possible to use blockchain technology for a broader range of financial instruments.<sup>201</sup> This ordinance will come into force when the application decree is published, or on July 1, 2018, at the latest.<sup>202</sup>

The French Financial Market Authority (Autorité des marchés financiers, AMF) and Prudential Supervisory Authority (Autorité de contrôle prudentiel et de résolution, ACPR) recently issued a

<sup>202</sup> *Id.* art. 8.

joint notice to investors, warning about the current unregulated nature of cryptocurrencies.<sup>203</sup> This document notes that bitcoin and other cryptocurrencies are not considered financial instruments under French law, and therefore do not fall under the regulatory framework of actual currencies or under the AMF's supervision.<sup>204</sup> The AMF and ACPR recognize the potential benefits that blockchain technology can hold for companies, but warn that cryptocurrencies are unregulated and particularly volatile investments.<sup>205</sup> This document is reminiscent of a slightly longer report that the French Central Bank (Banque de France) published in December 2013.<sup>206</sup> That report explained that bitcoin cannot be considered a real currency or means of payment under current French law,<sup>207</sup> and criticized it as a vehicle for speculation as well as an instrument for money laundering and other illegal activities.<sup>208</sup> The 2013 report also suggested that the conversion between bitcoin and real currencies should be considered a payment service, which therefore could only be performed by payment service providers authorized and supervised by the ACPR.<sup>209</sup> The ACPR acknowledged this position in a 2014 document in which it stated that entities that habitually engage in the activity of purchasing or selling cryptocurrencies in exchange for actual legal tender must be licensed as payment services providers by the ACPR.<sup>210</sup> However, the AMF and ACPR's 2017 joint notice recognizes that "the purchase/sale of and investments in bitcoin currently operate outside of any regulated market."<sup>211</sup>

In parallel to the independent regulatory institutions mentioned above, the French legislative and executive branches are actively investigating how best to regulate cryptocurrencies. To that purpose, the National Assembly (Assemblée nationale, one of the two houses of the French Parliament) has initiated a fact-finding mission on cryptocurrencies,<sup>212</sup> and a separate fact-finding mission on "blockchains and other technologies for the certification of ledgers."<sup>213</sup> Additionally,

the Minister of the Economy has recently tasked a former deputy governor of the Banque de France with researching how to best regulate cryptocurrencies to “better control their development and to prevent their use for tax evasion, money laundering, or the financing of criminal or terrorist activities.”<sup>214</sup>

It is also worth noting that France and Germany have jointly requested that cryptocurrencies be discussed by the G-20, so that coordinated initiatives may be taken at the international level.<sup>215</sup>

## Germany

The German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) qualifies virtual currencies/cryptocurrencies as units of account and therefore financial instruments.<sup>216</sup> Undertakings and persons that arrange the acquisition of tokens, sell or purchase tokens on a commercial basis, or carry out principal broking services in tokens via online trading platforms, among others, are generally required to obtain authorization from BaFin in advance.<sup>217</sup>

In February 2018, the German BaFin published information on the regulatory assessment of ICOs and the tokens, coins, and cryptocurrencies they are based on.<sup>218</sup> It stated that firms involved in ICOs need to assess on a case-by-case basis whether the ICOs qualify as financial instruments (transferable securities, units in collective investment undertakings, or investments) or as securities and therefore trigger the need to comply with the relevant financial legislation.

Also in February 2018, the German Federal Ministry of Finance published guidance on value-added-tax (VAT) treatment of bitcoin and other virtual currencies. It determined that transactions to exchange a traditional currency for bitcoin or other virtual currencies and vice versa constitute the taxable supply of other services for consideration, but fall under the exemption from VAT. It stated that bitcoin or other virtual currencies that are used simply as a means of payment are treated the same as traditional means of payment. Using bitcoin or other virtual currencies for no other purpose than as a means of payment is therefore not taxable. This guidance is in line with the European Court of Justice (ECJ) decision *Hedqvist* from October 22, 2015.<sup>219</sup> Virtual gaming money, meaning in-game currencies, particularly in online games, is not exempt, because it does not constitute a means of payment within the meaning of VAT law.<sup>220</sup> The Ministry also addressed several follow-up questions regarding the taxation of mining, digital wallets, and online trading platforms.<sup>221</sup>

The German Bundesbank stated that bitcoin cannot be qualified as a virtual currency. According to Dirk Schrade, Bundesbank expert in the area of payments, bitcoin is neither a virtual currency nor digital money, because it does not fulfill the typical functions of a currency, nor is it part of the national monetary system. The Bundesbank recommends using the term “crypto token.”<sup>222</sup>

In an article published in the newspaper *Frankfurter Allgemeine Zeitung* (FAZ), Carl-Ludwig Thiele, a member of the executive board of the German Bundesbank, warned investors in bitcoin and other cryptocurrencies to beware of their riskiness, fluctuations in value, costliness, and high-energy-need for mining, among other concerns.<sup>223</sup> However, he also pointed out that blockchain technology promises great potential for innovation and mentioned a joint project with the German stock exchange group (Deutsche Börse Gruppe) that tests the application and performance of blockchain technology in the settlement of securities transactions between banks.<sup>224</sup>

## Greece

The Bank of Greece on two occasions has issued announcements adopting the views of European supervisory authorities warning consumers of the risks of virtual currencies.<sup>225</sup>

## Hungary

On December 20, 2016, the National Bank of Hungary warned<sup>226</sup> consumers that using virtual currencies have many risks as they operate in a legally unregulated virtual system and there are no proper rules on liability, guarantee, and compensation that would protect the interests of consumers in the event of abuse.<sup>227</sup> The Bank had made similar statements in 2014<sup>228</sup> and 2015.<sup>229</sup>

## Ireland

Ireland does not appear to have any laws that specifically regulate cryptocurrencies.<sup>230</sup> The Central Bank of Ireland noted in March 2018 that in cases of initial coin offerings (ICOs), if the token issued can be deemed a “transferable security,” which is determined on a case-by-case basis, then the existing financial services legislation in Ireland will apply to it.<sup>231</sup> The Central Bank of Ireland also stated,

<sup>231</sup> Speech by Gerry Cross, Director of Policy and Risk, Central Bank of Ireland, at Joint Session: Banknotes / Identity High Meeting 2018 Security Printers, International Conference & Exhibition Hosted by Intergraf, Tomorrow’s Yesterday: Financial Regulation and Technological Change (Mar. 20, 2018), <https://www.centralbank>.

where the features of any given ICO match those of financial instrument issuance, then financial regulation applies, as of this moment, and issuers and others must, subject to legal penalty, ensure that they comply with the relevant rules.<sup>232</sup>

Capital gains tax law applies to transactions involving cryptocurrencies,<sup>233</sup> and this tax is chargeable if an individual makes a profit from buying and selling such currencies.<sup>234</sup>

The Central Bank of Ireland has endorsed a statement by the European Banking Authority, warning consumers of risks when undertaking transactions with virtual currencies,<sup>235</sup> and of the high risks of ICOs.<sup>236</sup>

The Irish government continues to take a wait-and-see approach to the regulation of cryptocurrencies:

To the extent that virtual currencies, ICOs, or those involved in their issuance or trading, are not subject to existing regulation, then the question arises: has the regulation fallen behind developments and needs updating. Or is it the case that these activities are just new examples of old types of activity and there is no need for further regulatory intervention, beyond making consumers properly aware of the significant risks through consumer warnings? Or might it simply be too early to say? . . . At the Central Bank, we are actively engaged with other European and international policy makers as we all try to figure out a way forward, including for example, work at the ESAs [European Supervisory Authorities]. Given the cross-jurisdictional nature of virtual currencies and ICOs, we at the Central Bank welcome these efforts by the ESAs.<sup>237</sup>

Ireland has harnessed the use of cryptocurrency to help its tourism industry, adopting the “Irishcoin,”<sup>238</sup> a currency aimed predominantly at the tourism market that is accepted in some locations across Ireland.<sup>239</sup>

## Italy

A Ministerial Resolution of September 2016 issued by the Revenue Agency (Agenzia delle Entrate)<sup>240</sup> addressed aspects of the tax treatment of bitcoin and other cybercurrencies. This Resolution implemented the decision issued by the European Court of Justice (ECJ) in the case of *Skatteverket v. David Hedqvist*,<sup>241</sup> which held that the value added tax (VAT) does not apply to transactions in which cybercurrencies are exchanged for traditional currencies or vice versa.<sup>242</sup>

In addition, the Resolution of 2016 indicates that for purposes of the corporate income tax (Imposta sul Reddito sulle Società, IRES) and the Italian regional production tax (Imposta Regionale sulle Attività Produttive, IRAP), profits and losses on such transactions constitute corporate income or losses subject to taxation.<sup>243</sup> The Resolution contains specific requirements for the registration of cryptocurrency operations, including names, amounts, dates, and other information on transactions.<sup>244</sup> Bitcoin operations performed by individuals who hold bitcoin for other than commercial or corporate purposes do not generate taxable income, according to the Resolution.<sup>245</sup>

Legislative Decree No. 90 of 2017 subjected virtual currency providers to the regulations established for traditional money exchange operators.<sup>246</sup> To that effect, Legislative Decree No. 90 charged the Ministry of the Economy and Finance to issue a ministerial decree setting forth the modalities and timelines for the legal performance of such activities throughout the country.<sup>247</sup> Accordingly, the Ministry of Economy and Finance's Treasury Department published a public notice requesting comments before February 17, 2018, on the proposed text of the ministerial decree.<sup>248</sup> It is expected that the ministerial decree will be issued during the upcoming months.

## Latvia

The position of the Bank of Latvia and the State Revenue Service is that cryptocurrency is a contractual, not statutory, means of payment that can be used in transactions of exchange. Cryptocurrency cannot be considered as official currency or legal tender because the issuance and use of these instruments remains unregulated and they are not linked to any national currency.<sup>249</sup>

In November of 2017 Latvia amended its anti-money laundering legislation and introduced monitoring requirements for virtual currency service providers, including providers of virtual currency exchange services. Virtual currency is now defined as the digital representation of a value that may be digitally transmitted, stored, or traded, and acts as an exchange instrument without being legal tender.<sup>250</sup>

## Lithuania

On October 11, 2017, the Bank of Lithuania stated that financial services must be clearly dissociated from activities related to virtual currencies and that financial market participants should not provide services associated with virtual currencies. In particular, they should not engage

in the sale of virtual currencies, provide conditions for customers to pay in payment instruments issued by them (debit or credit cards), or exchange or execute any other operations in virtual currencies.<sup>251</sup>

As to initial coin offerings (ICOs), the Bank clarified that depending on the nature of the offering, legal acts regulating crowdfunding, collective investment, provision of investment services, etc. must be applied.<sup>252</sup>

On March 6, 2018, the Bank of Lithuania announced that it plans to issue the world's first digital collector coin using blockchain or other equivalent technologies.<sup>253</sup>

## Luxembourg

Cryptocurrencies remain largely unregulated in Luxembourg, although the Duchy's government appears to display a more welcoming attitude towards the phenomenon than some of its European counterparts.

On March 14, 2018, the Financial Sector Monitoring Commission (Commission de Surveillance du Secteur Financier, CSSF) of Luxembourg issued a statement warning about the risks of investing in cryptocurrencies.<sup>254</sup> The CSSF's main objections are that cryptocurrencies are very volatile, offer no protection against theft and hacking, lack liquidity, are often the subject of misleading information, lack transparency, and are often used for fraud and money laundering.<sup>255</sup> The statement also warned against the risks of Initial Coin Offerings.<sup>256</sup> The CSSF, however, recognized the value of blockchain technology, noting that it could be used advantageously by the financial sector.<sup>257</sup> Furthermore, the CSSF's letter stated that while there is no legal framework that specifically applies to cryptocurrencies, the provision of any financial services—including those involving cryptocurrencies—requires an authorization from the Minister of Finance.<sup>258</sup>

<sup>258</sup> *Id.* at 4.

Despite this warning from its main financial services regulator, Luxembourg appears to see the development of cryptocurrencies in a positive light. In June 2017, the Luxembourg Minister of Finance, Pierre Gramegna, recognized before Parliament that cryptocurrencies are actual currencies, as “they are accepted as a means of payment for goods and services by a sufficiently large circle of people.”<sup>259</sup> He also stated that there was currently no regulation “from a monetary perspective” regarding cryptocurrencies, but that cryptocurrency dealers in Luxembourg are bound by the same rules as any other financial service providers with regards to the fight against money laundering and the financing of terrorism.<sup>260</sup> More recently, Gramegna publicly welcomed the establishment of BitFlyer, a major bitcoin trading platform, as a fully licensed payment service provider in Luxembourg.<sup>261</sup> In an interview shortly thereafter, Gramegna stated that cryptocurrencies and blockchain technology were both an “unavoidable phenomenon that brings added value and efficient services to consumers.”<sup>262</sup> Much work remains to be done to provide a legislative and regulatory framework for cryptocurrencies, however, as such a framework is largely inexistent at this time. During the welcoming ceremony for BitFlyer, the company’s founder noted that it had taken them two years to obtain their license and that “the regulation is unclear. There is no specific law and one must nevertheless protect the consumer.”<sup>263</sup>

## Malta

Malta currently does not have any legislation that specifically applies to cryptocurrency, but this will soon change. The Maltese government has actively encouraged the development of cryptocurrency and issuing many consultations and papers that discuss its regulation and development. The aim of these regulations is “[t]o provide the necessary legal certainty to allow this industry to flourish.”<sup>264</sup>

In October 2017, the government issued a consultation document that proposed a regulatory framework for collective investment schemes and investment in cryptocurrencies. As a result of

the consultation, Malta Financial Services Authority (MFSA) published conditions that apply to professional investor funds that invest in cryptocurrencies on January 22 and 29, 2018.<sup>265</sup>

In November 2017, the government published the *Discussion Paper on Initial Coin Offerings, Virtual Currencies and Related Service Providers*, which noted that while some cryptocurrencies might fall within the scope of existing financial services legislation, others would be outside the scope and thus unregulated.<sup>266</sup> In January 2018, the government issued a further discussion paper that “present[ed] a conceptual framework through which DLT Platforms can be subject to certification in Malta.”<sup>267</sup> The government has issued a statement that it intends to facilitate a regulatory framework for cryptocurrency-related activities and initial coin offerings (ICOs).<sup>268</sup>

Malta is currently considering three bills that would provide a regulatory framework for cryptocurrency and is following a principles-oriented approach to this legislation to help prevent the laws from becoming rapidly obsolete, or from stifling technological development.<sup>269</sup> The three bills are as follows:

- The Malta Digital Innovation Authority Bill (MDIA Bill) would establish the Malta Digital Innovation Authority (MDIA), which would “focus on innovative technology arrangements and their uses such that Malta can take the greatest advantage of new technology arrangements while at the same time protect[ing] the public interest.”<sup>270</sup> One of the first objectives for the MDIA would be to promote government policies that favor technical innovation, particularly with reference to digital ledger technology and its adoption by the government in systems of public administration.<sup>271</sup> Other objectives would include maintaining Malta’s reputation and protecting consumers.<sup>272</sup> The MDIA would also bear responsibility for certifying technology arrangements and registering technology services providers under the “TAS Bill.”<sup>273</sup>
- The “TAS Bill” would establish a regime for the registration of technology service providers and provide for the certification of certain technology arrangements. This regime will initially

<sup>273</sup> *Id.*

cover distributed ledger technology platforms and related contracts.<sup>274</sup> The proposals would require technology service providers that provide services for any distributed ledger technology platform in or from Malta be certified by the MDIA. Those who provide these services in other specified cases may voluntarily register with the MDIA.<sup>275</sup>

- The Virtual Currency Bill would establish a framework for ICOs and a regulatory regime that would apply to certain services relating to cryptocurrencies, such as brokers, wallet providers, and virtual currency exchanges.<sup>276</sup> The *Times of Malta* has reported that the government is considering introducing its own cryptocurrency “within a ‘controlled framework,’ which would enable regulators to test possible controls and legislation for the technology.”<sup>277</sup> The Virtual Currency Bill aims to regulate ICOs that relate to virtual currency not falling within the existing legislation. The bill will ensure that the offerings meet transparency requirements and will incorporate obligations that apply to initial public offerings that the issuer must follow.<sup>278</sup>

The MFSA has also proposed a “financial instrument test” that would enable individuals to determine,

with regulatory certainty[,] . . . whether, based on its specific features, an ICO or a VC [virtual currency] falls within the scope of the existing legislative framework, reflecting EU law on the subject, or if not, whether this will be required to comply with the new regulatory framework being proposed by the MFSA.<sup>279</sup>

The test proposed would be a two-stage test, the first of which would determine whether a cryptocurrency is a financial instrument within existing Maltese or European Union legislation. The second stage would determine if the cryptocurrency was an asset under the proposed Virtual Currency Bill.<sup>280</sup>

The MFSA would be the regulator for the financial services contained in the Virtual Currency Bill, and would have regulatory and investigatory powers that reflect those contained in the country’s other financial services laws, including the authority to suspend an ICO or trading of a cryptocurrency.<sup>281</sup>

<sup>281</sup> *Id.* at 26.

The government has also established a National Blockchain Strategy Taskforce to advise the government on a framework for distributed ledger technologies.<sup>282</sup>

After one of Malta's largest banks, the Bank of Valletta, blocked cryptocurrency transfers,<sup>283</sup> the government of Malta stated that it does not "interfere with individual banks' operational policies, which are dictated by circumstances which they are best placed to assess."<sup>284</sup> Many residents of Malta expressed surprise at the actions of the Bank, particularly as the government of Malta is its largest shareholder, owning approximately 25% of the Bank's shares.<sup>285</sup>

The Malta Gaming Authority has also stated that it is "committed to allow[ing] the use of cryptocurrencies by its licensees in the immediate future,"<sup>286</sup> and a new Gaming Bill is currently being considered that includes virtual currencies under the definition of "money and, or money's worth."<sup>287</sup>

### Netherlands<sup>288</sup>

The Central Bank of the Netherlands (De Nederlandsche Bank, DNB) has stated that it is studying the opportunities offered by blockchain and virtual currencies, but acknowledged that there are certain risks and drawbacks involved.<sup>289</sup> Furthermore, in January 2018, it published a position paper on cryptocurrencies and ICOs in which it highlighted that cryptocurrencies "do not currently fulfill the role of money—in fact, they are hardly ever used for payment, and they are not a universally accepted and stable medium of exchange, a suitable unit of account or a reliable store of value. Accordingly, they do not have any implications in terms of monetary policy."<sup>290</sup>

<sup>288</sup> At present there are no Law Library of Congress research staff members versed in Dutch. This survey of the law of the Netherlands has been prepared by the author's reliance on practiced legal research methods and on the basis of relevant legal resources, chiefly in English, currently available in the Law Library and online.

<sup>289</sup> *Virtual Currencies*, DNB, <https://www.dnb.nl/en/payments/virtuele-valuta/index.jsp> (last visited Mar. 20, 2018), archived at <http://perma.cc/N3KY-MSLJ>.

<sup>290</sup> DNB, POSITION PAPER BY DE NEDERLANDSCHE BANK. ROUNDTABLE CRYPTOCURRENCIES/ICO'S 1 (Jan. 22, 2018), [https://www.dnb.nl/en/binaries/TR17025%20Position%20paper%20Cryptocurrencies\\_tcm47-371493.pdf?2018032021](https://www.dnb.nl/en/binaries/TR17025%20Position%20paper%20Cryptocurrencies_tcm47-371493.pdf?2018032021), archived at <http://perma.cc/6C3N-GF4B>.

The DNB supports the decision of the EU to extend the scope of the Fourth AMLD to include crypto exchanges and issuers of crypto wallets.<sup>291</sup> It is looking into whether converting cryptocurrencies into euros or other currencies, and vice versa, qualifies as issuing electronic money or as providing a payment service. It does not currently support a ban on cryptocurrencies.<sup>292</sup>

As a pilot project, the DNB has started the “DNBCoin” experiment for internal test purposes and focused on the blockchain as a vehicle for a virtual currency. They have developed several prototypes to study the way the bitcoin software can be adapted and used for financial market infrastructures.<sup>293</sup>

The Dutch Authority for the Financial Markets (Autoriteit Financiële Markten, AFM) has issued a warning regarding serious risks associated with ICOs.<sup>294</sup> It has advised consumers to avoid investing in ICOs, because they are vulnerable to misrepresentation, fraud, and manipulation and may also be structured in such a way that they are not subject to supervision by the AFM. The AFM assesses on a case-by-case basis whether the tokens in an ICO qualify as a security or a unit in a collective investment scheme as defined in the Financial Supervision Act and are therefore subject to authorization by the AFM.<sup>295</sup>

The Dutch Minister of Finance, Wopke Hoekstra, stated in a letter to parliament that the Netherlands does not want to ban the cryptocurrency trade, but that it should be regulated on a European or international level.<sup>296</sup> Any regulation, however, should not jeopardize the potential of the technique.<sup>297</sup> He also supports the application of anti-money laundering legislation to custodian wallet providers and virtual currency exchange platforms.<sup>298</sup>

## Poland

On July 7, 2017, the Polish National Bank and the Financial Supervision Commission jointly issued a warning against investing in virtual currencies, citing price volatility and the risk of fraud. The regulators clarified that virtual currencies are not considered legal tender in Poland. At the same time they noted that trading in virtual currencies is not an infringement of Polish or European law. The regulators consider that buying, holding, and selling of virtual currencies by financial institutions is not in line with the principles of stable and prudent management, and that having established relations with virtual currency traders could pose legal and reputational risk.<sup>299</sup>

On January 24, 2018, Prime Minister Morawiecki stated that Poland will either ban cryptocurrency or introduce regulations to ensure that it does not turn into a pyramid scheme.<sup>300</sup>

On April 4, 2018, the Ministry of Finance published guidance on the tax effects of trading in cryptocurrencies.<sup>301</sup> Income from transactions on cryptocurrencies is subject to income tax with two brackets of 18% and 32%, while the act of selling or purchasing digital currencies is considered a transfer of property rights, which is subject to a 1% levy on the value of the transaction.<sup>302</sup>

## Portugal

According to the Federal Reserve Bank of Portugal (Banco de Portugal), the activity of issuing and trading virtual currencies is neither regulated nor supervised by the Federal Reserve Bank of Portugal or any other authority of the financial system, national or European, in particular by the European Central Bank.<sup>303</sup> The absence of regulations on operations with virtual currencies does not make these activities illegal or prohibited, the Bank noted. However, entities that issue and sell virtual currencies are not subject to any obligation of authorization or registration with the Federal Reserve Bank of Portugal, so their activity is not subject to any kind of prudential or behavioral supervision.<sup>304</sup>

## Romania

On February 6, 2018, Romania's National Bank announced that it discourages any involvement of local credit institutions in the cryptocurrency sector because of reputational risks.<sup>305</sup> The Bank reminded of its earlier warning issued in March of 2015<sup>306</sup> on the high risks of losing the money invested in cryptocurrencies. Following this announcement the local banks closed the accounts of several cryptocurrency exchanges.<sup>307</sup>

In March of 2018 the National Agency for Fiscal Administration reportedly declared that income from transactions with cryptocurrencies are taxable.<sup>308</sup>

## Slovakia

On March 23, 2018, the Ministry of Finance published guidance explaining that revenues stemming from cryptocurrencies must be taxed, and that any type of exchange, such as an exchange of a virtual currency for an asset or a service rendered or for another virtual currency, must be considered to be a taxable transfer.<sup>309</sup> The guidance says that virtual currencies must be treated as “short-term financial assets other than money” and priced at market value at the time of transaction, and that cryptocurrencies directly obtain from mining shall be kept off-balance sheet until they are sold or traded.<sup>310</sup> Earlier the Finance Minister had noted that trade in cryptocurrencies, which is unregulated and anonymous, involves risks of terrorism and organized crime.<sup>311</sup>

In 2013 the National Bank of Slovakia issued a warning to inform the general public that virtual currencies are not national currencies and that unauthorized currency production constitutes a criminal offense.<sup>312</sup>

## Slovenia

On January 18, 2018, the Bank of Slovenia warned citizens that virtual currencies are not a digital replacement for banknotes and coins, and are not regulated.<sup>313</sup> The Bank explained that entities purchasing, depositing, or trading virtual currencies in Slovenia are not systematically regulated and supervised. It advised citizens to inform themselves about virtual currencies before buying them and to be aware that they could lose their investments in those currencies.<sup>314</sup> Following the Bank’s warning commercial banks reportedly stopped selling cryptocurrencies via ATMs.<sup>315</sup>

Earlier on October 9, 2017, the Financial Stability Board recommended that investors in virtual currencies consider whether the risks are in line with their personal preferences and investment

goals,<sup>316</sup> and that investors in ICOs should invest in amounts that would not leave them too exposed.<sup>317</sup>

## Spain

Spain's Comisión Nacional de Valores (National Securities Commission) and the Banco de España (Bank of Spain) issued a joint statement regarding the use of bitcoin in February 2018<sup>318</sup> noting that cryptocurrency is not issued, registered, authorized, or verified by any regulatory agency in Spain. Therefore, cryptocurrencies purchased or held in Spain are not backed by any of the guarantees or safeguards provided by regulations applicable to banking or investment products.<sup>319</sup> The statement aimed to alert investors of the inherent risk of loss or fraud associated with these types of transactions.<sup>320</sup>

Notwithstanding this warning, the government is considering the adoption of legislation friendly towards cryptocurrencies, which would include possible tax breaks to attract companies in the blockchain technology sector.<sup>321</sup>

Profits derived from transactions with cryptocurrencies are taxable under the Law on Income Tax of Individuals.<sup>322</sup> However, the Dirección General de Tributos (General Directorate on Taxation) has established that transactions with bitcoins are exempt from value added tax.<sup>323</sup>

## Sweden

Sweden does not have any specific regulation that deals with cryptocurrencies. A number of agencies have issued statements, reports, and preliminary judgements on how they interpret cryptocurrencies and how such currencies relate to Swedish law.

The Swedish Financial Supervisory Authority (Finansinspektionen) has made the determination that bitcoins are subject to its authority, as trade in bitcoins (i.e., offering a site where bitcoins can be bought and sold similar to an exchange) is a financial service (*annan finansiell verksamhet*) and thus subject to mandatory reporting requirements.<sup>324</sup> In 2017, the Authority issued a report titled *The Authority's Role in Innovation*, which among other things described its role in relation to novel concepts such as bitcoin.<sup>325</sup> The report described ICOs as investment projects and means of securing capital.<sup>326</sup> The Authority has also issued warnings against the use of ICOs, noting that they are unregulated and not subject to its review.<sup>327</sup> It referred to the European Supervisory Authority for its interpretation that ICOs may be regulated by the Prospectus Directive, the Markets in Financial Instruments Directive (MiFID), the Alternative Investment Fund Managers Directive (AIFMD), and the Fourth Anti-Money Laundering Directive.<sup>328</sup> The Authority's 2017 report stated that it is unaware of any Swedish corporation that secures funding through ICOs.<sup>329</sup>

In March of 2018 the Swedish Central Bank announced that “[b]itcoins are not money.”<sup>330</sup> The announcement explained that cryptocurrencies are not seen as currencies, referencing a new financial report on cryptocurrencies written by the Central Bank of Sweden staff.<sup>331</sup> The Central Bank of Sweden is considering launching an e-currency, but the project is still in the review stage.<sup>332</sup>

In 2015 the Swedish Tax Authority published a guideline on how it will view and tax mined bitcoins for the 2014 tax year.<sup>333</sup> Unless specific conditions are met the digital currency mined is considered income from a hobby, and generally tax exempt.<sup>334</sup> The Tax Authority has not issued a determination on the applicability of the Income Tax Act with respect to potential capital gains from bitcoins.

The Swedish Skatterättsnämnden (Swedish Tax Board) issued a preliminary ruling in 2013 on value-added tax (VAT) and bitcoins, stating that trade in bitcoins is not subject to Swedish VAT, but is instead subject to Financial Supervisory Authority regulations and treated as a currency. The decision was appealed by the Swedish Tax Authority.<sup>335</sup> The Swedish Administrative Supreme Court ruled that bitcoins and similar cryptocurrencies are not subject to VAT.<sup>336</sup> That decision was rendered following a preliminary judgment from the Court of Justice of the European Union holding that cryptocurrencies are exempt from VAT.<sup>337</sup>

In 2014 representatives of the Swedish Enforcement Authority announced to Swedish media outlets that it would start to investigate and seize bitcoin holdings when collecting funds from indebted individuals.<sup>338</sup> The first seized bitcoins were auctioned off online in 2017.<sup>339</sup>

In a response to a question from a member of Parliament the Swedish government has advised caution in the use of cryptocurrencies by citizens, as it is unregulated and carries risk.<sup>340</sup>

On July 23, 2017, the Nasdaq Stockholm Disciplinary Committee rendered a decision that ordered the bitcoin company XBT Provider AB to pay a fine of SEK1,000,000 (approximately US\$120,000) for failing to publish annual reports and make its prospectus available online.<sup>341</sup>

## United Kingdom

The United Kingdom does not have any laws that specifically regulate cryptocurrencies, such as bitcoin, ethereum, litecoin, etc. The governor of the Bank of England reportedly stated that regulation of cryptocurrencies is necessary:

A better path would be to regulate elements of the crypto-asset ecosystem to combat illicit activities, promote market integrity, and protect the safety and soundness of the financial system[.]<sup>342</sup>

Section 2A of the Bank of England Act 1998 specifies that the Bank of England has responsibility to both protect and enhance the stability of the financial system of the UK.<sup>343</sup> Pursuant to this objective, the Bank has considered the risk cryptocurrencies pose to the stability of the UK's financial markets and determined that the size of the cryptocurrency market is currently not large enough to pose a "material risk to monetary or financial stability in the UK."<sup>344</sup>

Other concerns raised by the use of cryptocurrencies include ensuring consumers are protected when using this form of payment, money laundering, taxation, and the use of these systems to finance terrorism and other crimes.<sup>345</sup>

<sup>345</sup> Ali, *supra* note 344, at 344.

With regard to taxation, Her Majesty's Revenue and Customs notes that “[c]ryptocurrencies have a unique identity and cannot therefore be directly compared to any other form of investment activity or payment mechanism.”<sup>346</sup> The taxability of income received from cryptocurrencies is dependent upon the “activities and parties involved.”<sup>347</sup> Value added tax (VAT) (approximately equivalent to US sales tax) is only chargeable from suppliers for any goods or services sold in the UK in exchange for cryptocurrency.<sup>348</sup>

Corporate tax rules apply to businesses for the profits or losses in currency exchanges, which includes cryptocurrencies. HM Revenue and Customs has stated, “[f]or the tax treatment of virtual currencies, the general rules on foreign exchange and loan relationships apply. We have not at this stage identified any need to consider bespoke rules.”<sup>349</sup> Any company that enters into transactions that involves cryptocurrencies are thus treated in the same manner as regular transactions under the current corporate tax rules, and any gains made are taxed accordingly.

For unincorporated businesses, income tax is chargeable to the profits and losses that can be attributed to cryptocurrency transactions.<sup>350</sup> The UK also taxes the earnings of transactions in which a gain is realized after a transaction with cryptocurrencies if an individual user buys and sells coins as an investor.<sup>351</sup> Such gains fall within capital gains tax, and this tax is chargeable to any gain made that involves a cryptocurrency.

## II. Non-EU Members

### Albania

On July 13, 2017, the Bank of Albania declared that the legal and regulatory framework then in place did not envisage carrying out operations with cryptocurrency in Albania and users were exposed to certain risks. The Bank noted that because of the high degree of anonymity, transactions in such currency may be misused for criminal activities, including money laundering, terrorism financing, or the smuggling of goods. The Bank urged the Albanian public to be mature and responsible in the administration of the savings or liquidity they possess, while national and international stakeholders intensively work to adequately regulate and supervise cryptocurrency.<sup>352</sup>

## Armenia

On March 1, 2018, the government of Armenia published a document stating that adoption of a proposed law on cryptocurrencies is not advisable given that the majority of the leading countries urge people to refrain from operations with cryptocurrencies.<sup>353</sup> The document was prepared in response to a draft law on the development of digital technologies introduced by an opposition political party that would provide for the liberalization of mining activities and their exemption from taxes until the end of 2023.<sup>354</sup>

## Azerbaijan

On February 12, 2018, the chairman of the board of Azerbaijan's Central Bank, Elman Rustamov, stated that cryptocurrency is a very volatile instrument and urged the population to be more careful in dealing with cryptocurrencies.<sup>355</sup> Earlier in January it was reported that a working group has been established to develop a draft law on the regulation of trade in cryptocurrencies.<sup>356</sup>

## Belarus

In Belarus the Presidential Decree on the development of the digital economy<sup>357</sup> came into effect on March 28, 2018. It permits buying, selling, exchanging, and mining cryptocurrency. Most of the tax and currency regulations in the decree extend only to legal entities operating on the territory of the High Technologies Park, a special economic zone. However, individuals are permitted to engage in mining; acquire tokens; and exchange, sell, donate, bequeath, and otherwise dispose of cryptocurrency. Income generated by mining and operations in cryptocurrencies is exempt from taxation until 2023. The Decree also provides for the possibility of the creation of ICO operators in the High Technologies Park. The Park will also host a crypto-exchange and mining operators.

<sup>357</sup> Decree of the President of the Republic of Belarus No. 8 of Dec. 21, 2017, [http://president.gov.by/ru/official\\_documents\\_ru/view/dekret-8-ot-21-dekabrya-2017-g-17716/](http://president.gov.by/ru/official_documents_ru/view/dekret-8-ot-21-dekabrya-2017-g-17716/), archived at <https://perma.cc/S9UM-CKRG> (in Russian).

The Decree has not established rules for the operation of ICO operators and the crypto-exchange; these areas will be left to self-regulation. The exchange of cryptocurrency for fiat money must be approved by the National Bank. Operators of cryptocurrency exchanges will be treated as high-risk clients similar to operators of lottery games and casinos.<sup>358</sup>

Businesses operating in the Park are exempt from taxes and only have to pay 1% of their turnover to the government. This arrangement is guaranteed by the government to last until 2049. The minimum capital requirements are 1 million Belarusian rubles (approximately, US\$505,000) for the operator of a crypto-platform and 200,000 rubles (approximately US\$101,000) for the operator of a cryptocurrency exchange office.<sup>359</sup>

### **Bosnia and Herzegovina**

On January 9, 2018, the Central Bank of Bosnia and Herzegovina announced that the convertible mark (the currency of Bosnia and Herzegovina) is the only legal means of payment in the country, and it is not possible to exchange bitcoins and other cryptocurrencies for convertible mark. At the same time, the Bank stated that there were no plans to limit or prevent the purchase of and trading in virtual currencies.<sup>360</sup>

### **Georgia**

On December 20, 2017, the National Bank of Georgia confirmed that cryptocurrency is not legal tender in Georgia and is not regulated by Georgian law.<sup>361</sup> The Bank urged Georgian citizens to be careful in dealing with cryptocurrencies.<sup>362</sup>

## Gibraltar

The government of Gibraltar recently introduced regulations governing the provision of Distributed Ledger Technology (DLT)<sup>363</sup> and is currently in the process of introducing draft legislation to regulate initial coin offerings (ICOs). It is also considering a further regulatory framework that would address the sale and promotion of tokens to complement the DLT regulations.<sup>364</sup>

On October 12, 2017, the government of Gibraltar introduced the Financial Services (Distributed Ledger Technology Providers) Regulations 2017<sup>365</sup> under the Financial Services (Investment and Fiduciary Services) Act.<sup>366</sup> These Regulations entered into force on January 1, 2018.<sup>367</sup> The regulatory framework covers firms that operate in or from Gibraltar and provide DLT services, defined in the Financial Services (Investment and Fiduciary Services) Act as “[c]arrying on by way of business, in or from Gibraltar, the use of distributed ledger technology for storing or transmitting value belonging to others.”<sup>368</sup> The regulations require these firms to apply for a license from the Gibraltar Financial Services Commission to become a DLT provider.<sup>369</sup>

DLT license holders are also required to pay an annual fee, charged at a flat rate of £10,000 (approximately US\$14,000), although an additional fee of up to £20,000 (approximately US\$28,000) may be charged “depending upon the complexity of regulating the DLT Provider.”<sup>370</sup> Companies that are currently licensed under the existing financial legislation in Gibraltar and use DLT to

---

<sup>363</sup> Distributed ledger technology (DLT) is defined in the Financial Services (Investment and Fiduciary Services) Act 1989, Act No. 49-1989, sched. 3 ¶ 10(2), <http://www.gibraltarlaws.gov.gi/articles/1989-470.pdf>, archived at <https://perma.cc/MUK3-5Q3T>, as “a database system in which – (a) information is recorded and consensually shared and synchronised across a network of multiple nodes; and (b) all copies of the database are regarded as equally authentic; and ‘Value’ includes assets, holdings and other forms of ownership, rights or interests, with or without related information, such as agreements or transactions for the transfer of value or its payment, clearing or settlement.”

<sup>364</sup> Statement on Initial Coin Offerings, Gibraltar Financial Services Commission (Sept. 22, 2017), <http://www.gfsc.gi/news/statement-on-initial-coin-offerings-250>, archived at <https://perma.cc/CN3Z-A9AS>.

<sup>365</sup> Financial Services (Distributed Ledger Technology Providers) Regulations 2017, Legal Notice No. 204/2017, GIBRALTAR GAZETTE No. 4401 (Oct. 12, 2017), [http://www.gfsc.gi/uploads/DLT\\_regulations\\_121017\\_\(2\).pdf](http://www.gfsc.gi/uploads/DLT_regulations_121017_(2).pdf), archived at <https://perma.cc/QG2W-8TQ6>.

<sup>366</sup> Financial Services (Investment and Fiduciary Services) Act 1989, §§ 5, 7, 53, 56.

<sup>367</sup> Financial Services (Distributed Ledger Technology Providers) Regulations 2017, reg 1(2). See also Press Release, Gibraltar Financial Services Commission, Distributed Ledger Technology (DLT) Regulatory Framework (Jan. 2, 2018), <http://www.gfsc.gi/news/distributed-ledger-technology-dlt-regulatory-framework-270>, archived at <https://perma.cc/7DPW-ANKK>.

<sup>368</sup> Financial Services (Investment and Fiduciary Services) Act 1989, sched. 3, ¶ 10.

<sup>369</sup> *Distributed Ledger Technology Regulatory Framework (DLT Framework)*, GIBRALTAR FINANCIAL SERVICES COMMISSION (Jan. 2, 2018), <http://www.gfsc.gi/dlt>, archived at <https://perma.cc/L753-37RN>.

<sup>370</sup> Financial Services Commission (Fees) Regulations 2016, LN 2016/071, sched. 1, <http://www.gibraltarlaws.gov.gi/articles/2016s071.pdf>, archived at <https://perma.cc/7KHF-LXNJ>.

improve their controls, procedures and processes will not need to obtain a separate licence under the DLT framework, unless the activities are not currently caught within the scope of the licence they hold . . . However, if [they] are licensed as a bank, but intend to provide virtual currency wallets and/or services [they] will be required to obtain a licence under the DLT regime.<sup>371</sup>

DLT providers must comply with Gibraltar’s requirements concerning anti-money laundering and combatting the financing of terrorism, as well as those of any jurisdiction in which they also operate.<sup>372</sup>

Under the Regulations the provision of DLT services without a license is an offense, punishable with a fine of up to £10,000 (approximately US\$14,000).<sup>373</sup> The government of Gibraltar claims that the Gibraltar Financial Services Commission is the first regulator to introduce a framework regulating Distributed Ledger Technology (DLT).<sup>374</sup> The aim of introducing the legislation is to protect consumers and the reputation of Gibraltar as a well-regulated and safe environment for firms that use DLT, and enable Gibraltar to prosper from the use and growth of new financial technology.

The government of Gibraltar has expressed concern over the use of tokenized digital assets (tokens) and cryptocurrency given by companies to raise capital and bypass the traditional, regulated, capital-raising process required by financial institutions or venture capitalists.<sup>375</sup> It is currently working to develop legislation to regulate the use of tokens, “essentially those created and traded using [DLT]”<sup>376</sup> that will align with the DLT regulations,<sup>377</sup> and expects a bill to be before Parliament by the second quarter of 2018.<sup>378</sup>

## Guernsey

Guernsey is a Crown Dependency of the United Kingdom and is a low-tax jurisdiction with a large financial sector. In 2014, the Guernsey Financial Services Commission, which is responsible for supervising and regulating licensees from the banking, fiduciary, insurance, and investment sectors,<sup>379</sup> issued a statement that the Commission was adopting a cautionary approach towards “virtual currencies” and may refuse application to register financial service businesses if virtual currency is involved.<sup>380</sup> Specifically,

[t]he Commission has a policy of encouraging innovation. Virtual currencies are an area of innovation which the Commission continues to monitor closely while recognising that there are currently significant risks associated with them. In the light of those risks, the Commission will adopt a cautious approach and may well refuse applications to register financial services business where the use of virtual currency is involved. However, this approach will be regularly reviewed in the light of international developments.<sup>381</sup>

In 2015, a report commissioned by the Guernsey government noted that the major drawback for cryptocurrencies was the difficulty in complying with international anti-money laundering standards.<sup>382</sup> Three years after the issuance of the first statement, on February 27, 2018, the Guernsey Financial Services Commission issued a further statement that it believes there are “significant risks in the use of virtual or crypto currencies especially for retail customers. Nevertheless, we understand that professional investors with a high risk appetite may wish to invest in this developing sector.”<sup>383</sup>

The Financial Services Commission has stated that it will assess any application on its individual merits against the criteria used for asset types or structures, as cryptocurrencies “could interact with [the countries] regulatory laws<sup>384</sup> in a number of ways.”<sup>385</sup> Applicants must demonstrate how they will comply with the laws and rules to counter financial crime and terrorist financing, with

particularly regard to establishing the identity of both investors and beneficial owners.<sup>386</sup> The Commission has stated that it would continue to be cautious to approve applications for initial coin offerings that could later be traded on the secondary market due to the risk of fraud and money laundering, along with applications for any kinds of digital currency exchanges.

## Iceland

The legality of cryptocurrencies in Iceland is unclear. In 2014, the Central Bank of Iceland, in anticipation of the launch of the Icelandic peer-to-peer cryptocurrency Auroracoin,<sup>387</sup> announced that bitcoin was not a recognized currency and even if it was, purchases of bitcoins would still be illegal as such purchases would have violated the foreign transactions restrictions then in place.<sup>388</sup> The Icelandic Foreign Exchange Act then specified that Icelandic currency could not leave the country.<sup>389</sup> A purchase of an overseas-based cryptocurrency would have been a violation of the Act, as the cryptocurrency would have been considered purchased from abroad.<sup>390</sup>

Since then, however, Iceland has eased its foreign exchange and asset control rules and now allows for cross-border transactions of Icelandic krónur.<sup>391</sup> However, according to the Icelandic Central Bank, restrictions on so-called offshore króna assets and special reserve requirements for specified investments in connection with new inflows of foreign currency will remain in place.<sup>392</sup> For example, there is still a requirement to notify the Icelandic Central Bank of international purchases of Icelandic krónur and derivative transactions, and rules also require a special reserve when there is an inflow of a foreign currency into Iceland.<sup>393</sup> Restrictions will also remain in place on “i

<sup>392</sup> Press Release, Central Bank of Iceland, New Rules on Foreign Exchange (Mar. 12, 2017), <https://www.cb.is/publications/news/news/2017/03/12/New-Rules-on-Foreign-Exchange-/>, archived at <https://perma.cc/6Y8E-G5TP>.

<sup>393</sup> Central Bank of Iceland, Rules on Foreign Exchange arts. 3, 8, 12, 14 & 17; Central Bank of Iceland, Rules Amending the Central Bank of Iceland Rules No. 490/2016 on Special Reserve Requirements for New Foreign Currency Inflows, with Subsequent Amendments (Mar. 12, 2017), <https://cb.is/library/Skraarsafn---EN/Capital->

derivatives trading for purposes other than hedging; ii) foreign exchange transactions carried out between residents and non-residents without the intermediation of a financial undertaking; and iii) in certain instances, foreign-denominated lending by residents to non-residents.”<sup>394</sup> It is possible that trade and investments in cryptocurrencies would be limited by these regulations. Because cross-border transactions with Icelandic krónur are allowed, however, bitcoins would not be limited for this reason alone.<sup>395</sup>

The Central Bank of Iceland has not commented on whether cryptocurrency transactions are transactions “carried out between residents and nonresidents without the intermediation of a financial undertaking.”<sup>396</sup>

The Icelandic Tax Authority has issued guidelines for filing income taxes for the tax year 2017, requiring that bitcoins be included under section 4.4, “*Aðrar eignir áður ótaldar*” (Other Assets).<sup>397</sup> The value of cryptocurrency holdings is based on the prevailing exchange rate on December 31 of the tax year.<sup>398</sup>

Reportedly, members of Parliament are considering adopting legislation that would tax companies that mine cryptocurrencies in Iceland, based on their usage of natural resources (electricity).<sup>399</sup>

## Isle of Man

The Isle of Man is a Crown Dependency of the United Kingdom and is a low-tax jurisdiction with a robust online gambling industry and burgeoning financial sector. Referred to in some reports as “Bitcoin Island,” many establishments across the Island already accept bitcoins as payment alongside its national currency.<sup>400</sup>

<sup>400</sup> Cahal Milmo, *Bitcoin: How The Isle of Man is Leading a Cryptocurrency Revolution*, INDEPENDENT (London) (Jan. 3, 2016), <https://www.independent.co.uk/news/uk/home-news/bitcoin-how-the-isle-of-man-is-sparking-a-cryptocurrency-revolution-a6794756.html>, archived at <https://perma.cc/NUY8-XTS4>.

The Isle of Man was an early adopter of legislation to regulate cryptocurrencies within its jurisdiction. The Proceeds of Crime Act 2008 was amended in 2015 to include virtual currency businesses within its regulated sector as a “designated business,”<sup>401</sup> specifically those that are in

the business of issuing, transmitting, transferring, providing safe custody or storage of, administering, managing, lending, buying, selling, exchanging or otherwise trading or intermediating convertible virtual currencies, including crypto-currencies or similar concepts where the concept is accepted by persons as a means of payment for goods.<sup>402</sup>

This amendment brought businesses that engaged in these activities, including those that wish to offer initial coin offerings (ICO),<sup>403</sup> within the ambit of its anti-money laundering laws,<sup>404</sup> requiring the use of know-your-customer practices, such as collecting identifying information, knowing the beneficial owner of any currency, and record keeping and reporting requirements for certain transactions.<sup>405</sup> These businesses are overseen by the Isle of Man Financial Services Authority to ensure compliance with these laws.<sup>406</sup>

The Isle of Man distinguishes between four different types of online currencies:

Digital currency refers to any electronic representation of a fiat currency and this can include representations of virtual currency.

Virtual currency is a narrower asset and is a digital representation of value which can be traded digitally. The nature of a virtual currency means that it does not need to be centrally controlled or administered. Virtual currency can be either convertible or non-convertible.

Convertible virtual currency, which includes crypto-currency, can be converted into a fiat currency, either directly, or through an exchange. For a currency to be convertible, there does not need to be set rate or an established benchmark, but that merely a market exists and the ownership rights can be transferred from one person to another, whether for consideration or not.

Non-convertible virtual currency, once purchased, cannot be transferred to another person and cannot be redeemed for fiat currency, either directly or through an exchange. (Note

<sup>405</sup> Isle of Man Financial Services Authority, *Virtual Currency Business: Sector Specific AML/CFT Guidance Notes* (Oct. 2016), available at <https://www.iomfsa.im/media/1606/virtualcurrencyguidance.pdf>, archived at <https://perma.cc/4UWC-S4BK>.

<sup>406</sup> *Designated Businesses (Registration and Oversight) Act 2015 – AML/CFT Handbook*, *supra* note 404.

that the Schedule 4 to POCA [Proceeds of Crime Act] definition does not extend to non-convertible currency businesses).<sup>407</sup>

The Designated Business (Registration and Oversight) Act 2015<sup>408</sup> provides that virtual currency businesses are designated businesses, requiring such businesses to register with, and be overseen by, the Isle of Man Financial Services Authority.<sup>409</sup> Virtual currency businesses are defined in the Act as those that are in

the business of issuing, transmitting, transferring, providing safe custody or storage of, administering, managing, lending, buying, selling, exchanging or otherwise trading or intermediating convertible virtual currencies, including crypto-currencies or similar concepts where the concept is accepted by persons as a means of payment for goods or services, a unit of account, a store of value or a commodity[.]<sup>410</sup>

Businesses registered under this Act are required to submit annual returns that show compliance with anti-money laundering laws. The register of companies that engage in cryptocurrencies and operate from the Island has been created using blockchain technology to store the data, making the Isle of Man the first government to use this type of technology to store official data, according to Bloomberg.<sup>411</sup>

For ICOs, the FSA has stated that it will not register an applicant if the ICO provides tokens that do not offer any benefit to the purchaser other than the token itself, because

[s]uch characteristics are generally considered by the FSA to pose an unacceptably high risk that the money raised from the ICO could be used for unanticipated and illegal purposes, as well as posing a risk to consumers. It is because of these risks that it is the policy of the FSA to refuse to register this type of business.<sup>412</sup>

The Isle of Man recently amended its online gambling laws to enable operators to accept virtual currencies.<sup>413</sup>

## Jersey

Jersey is a Crown Dependency of the United Kingdom and is a low-tax jurisdiction with a large financial sector. The jurisdiction issued a consultation on the regulation of cryptocurrencies in 2015, noting “[t]he creation of a business-friendly framework that encourages innovation, jobs and growth in both the financial services and digital sectors is a priority for the Government of Jersey.”<sup>414</sup> The majority response to the consultation was that cryptocurrencies should be regulated only to the extent of ensuring compliance with anti-money laundering laws and to counter the financing of terrorism.<sup>415</sup> The government of Jersey rejected “a full prudential and conduct of business regime” for cryptocurrencies, as it considered it was too early to issue such regulations given that cryptocurrencies are in the early stages of development and that doing so could be overburdensome, and restrict development and innovation.<sup>416</sup>

The result of the consultation was the issuance of a document by the Chief Minister’s Department explaining Jersey’s policy position regarding the regulation of virtual currencies. According to the document,

[u]ltimately, the aim of this policy is to further enhance Jersey’s proposition as a world leading Fintech jurisdiction . . . [and] to outline Jersey’s commitment to creating an environment that encourages confidence and innovation in the digital sector whilst protecting the Island from the most prominent money laundering and terrorist financing risks that are presented by virtual currencies in their current form.<sup>417</sup>

Jersey’s anti-money laundering laws and counterterrorism financing laws were extended to cover cryptocurrencies through measures that entered into force on September 26, 2016.<sup>418</sup> “Virtual currencies” are defined in the Proceeds of Crime Act as a currency rather than a commodity, thus enabling it to fall within the current regulatory framework and be regulated by the Jersey Financial Services Commission.<sup>419</sup> Specifically, the Act defines “virtual currency” as

<sup>416</sup> *Id.* ¶ 1.2.

<sup>417</sup> *Id.* at 2.

<sup>418</sup> Proceeds of Crime (Miscellaneous Amendments) (Jersey) Regulations 2016, R&O 63/2016, <https://www.jerseylaw.je/laws/enacted/PDFs/RO-063-2016.pdf>, archived at <https://perma.cc/F2H5-2KNV>; Proceeds of Crime (Supervisory Bodies) (Virtual Currency Exchange Business) (Exemption) (Jersey) Order 2016, REVISED LAWS OF JERSEY, <https://www.jerseylaw.je/laws/revised/PDFs/08.785.80.pdf>, archived at <https://perma.cc/A8W9-7753>.

<sup>419</sup> Proceeds of Crime Act 1999, Sched. 2, Part B, ¶ 9, <https://www.jerseylaw.je/laws/revised/Pages/08.780.aspx#Toc468266188>, archived at <https://perma.cc/K2YU-7KA4>.

- (4) . . . any currency which (whilst not itself being issued by, or legal tender in, any jurisdiction) –
- (a) digitally represents value;
  - (b) is a unit of account;
  - (c) functions as a medium of exchange; and
  - (d) is capable of being digitally exchanged for money in any form.<sup>420</sup>

The term “virtual currency exchange” is defined in the Act as “the exchange of virtual currency for money in any form, or vice versa,” with the clarification that “a reference to providing a service to third parties shall not include a company’s providing that service to a connected company.”<sup>421</sup>

Virtual currencies were also brought within the ambit of the Money Laundering (Jersey) Order 2008,<sup>422</sup> which requires individuals operating a “Money Service Business” to register with the Jersey Financial Services Commission and comply with the jurisdiction’s anti-money laundering and counterterrorism financing laws if they have an annual turnover greater than £150,000 (approximately US\$210,000).<sup>423</sup> Subject to certain exemptions, these laws require such businesses to adopt policies and procedures to prevent and detect money laundering and terrorist financing and appoint a money laundering compliance officer and reporting officer, along with ensuring that record keeping and customer due diligence measures are implemented,<sup>424</sup> such as know-your-customer measures to one-off transactions greater than €1,000 (approximately US\$1,220).<sup>425</sup>

Businesses that trade in goods and receive payments of €15,000 (approximately US\$18,500) and above per transaction in cryptocurrency are classed as “high value dealers” under the Proceeds of Crime Act 1999.<sup>426</sup> Such dealers must be registered and supervised by the Jersey Financial Services Commission and comply with Jersey’s money laundering and counter terrorist financing laws.<sup>427</sup>

<sup>427</sup> *Id.* Sched. 2, Part B, ¶ 4.

At the time of the consultation, the government considered the regulation of distributed ledger and blockchain technology, but considered that this area was evolving too quickly to regulate effectively.<sup>428</sup> It opted to actively monitor these areas for development and consideration of regulation in the future.<sup>429</sup>

## Kosovo

The Central Bank of Kosovo has issued several warnings about the use of cryptocurrencies. The latest, published on January 31, 2018, reminded persons that virtual money is not recognized as legal tender and that financial losses may result from investing in cryptocurrencies. The Bank also noted the unreliability of virtual platforms for trading in cryptocurrencies and their susceptibility to cybertheft. The Bank said it is considering adapting recommendations made internationally to limit the anonymous use of cryptocurrencies and to enact rules to combat money laundering and terrorist financing via such currencies.<sup>430</sup>

On February 27, 2018, the Bank announced the establishment of a permanent advisory group for evaluating and addressing regulatory challenges related to virtual money.<sup>431</sup>

## Liechtenstein

Liechtenstein has included “virtual currencies” in the latest amendment of its Due Diligence Act.<sup>432</sup> The due diligence obligations codified in the Act serve to combat money laundering, organized crime, and terrorist financing and apply to providers of exchange services, among others. An “exchange office (bureau de change)” is defined as any “natural or legal person whose activities consist in the exchange of legal tender at the official exchange rate or of virtual currencies against legal tender and vice versa.”<sup>433</sup> “Virtual currencies” are defined as “digital monetary units, which can be exchanged for legal tender, used to purchase goods or services or to preserve value and thus assume the function of legal tender.”<sup>434</sup>

<sup>434</sup> *Id.*

The Financial Market Authority of Liechtenstein (Finanzmarktaufsicht, FMA) has issued a factsheet on virtual currencies like bitcoin.<sup>435</sup> It stated that virtual currencies are generally defined as a “digital representation of a (cash equivalent) value that is neither issued by a central bank or a public authority” and do not constitute fiat currency (legal tender). However, it is pointed out that virtual currencies are similar to fiat currencies when they are used as a means of payment or traded on an exchange. The production and the use of virtual currencies as a means of payment are currently not subject to any licensing requirement governed by specialized legislation. However, the FMA states that depending on the specific design of the business model, licensing requirements might apply. Business models are assessed on a case-by-case basis.<sup>436</sup> In particular, due diligence requirements according to the Due Diligence Act may apply.

The FMA has also issued a factsheet on ICOs.<sup>437</sup> Depending on the specific design and the function of the tokens, tokens may constitute financial instruments if they have characteristics of equity securities or other investments. Activities relating to financial instruments are subject to licensing by the FMA.<sup>438</sup> The FMA assesses ICOs on a case-by-case basis.<sup>439</sup>

## Macedonia

On September 28, 2016, the National Bank of Macedonia issued a warning against cryptocurrencies.<sup>440</sup> The Bank reminded Macedonian residents that they are not allowed to have bank accounts or securities abroad, with certain exceptions, and therefore, investments by residents in cryptocurrencies are also not allowed. The Bank also underscored the possibility of losing money on cryptocurrency investments due to devaluation, theft, the poor functioning of cryptocurrency exchanges, and possible links to criminal activities.<sup>441</sup>

## Moldova

On February 15, 2018, the National Bank of Moldova issued a statement<sup>442</sup> recommending that Moldovans be as cautious as possible in deciding whether to invest in crypto-assets, given the technical characteristics of cryptocurrency, its high volatility, and the absence of any regulation that would protect investors.<sup>443</sup>

In Transnistria, a breakaway territory of Moldova, a law was passed on January 31, 2018, to legalize mining activities.<sup>444</sup> It provides for creation of free economic zones for mining purposes. The authorities of the self-proclaimed republic promise exemption from taxes, duty-free import and export of mining equipment, and assistance with energy supply.<sup>445</sup>

## Montenegro

In November 2014 the Central Bank of Montenegro reportedly issued a warning saying that individuals may own bitcoins at their own risk, although virtual currencies are not legal tender in Montenegro.<sup>446</sup>

## Norway

The Norwegian Financial Supervisory Authority issued warnings against cryptocurrencies both in 2013 and 2018.<sup>447</sup> It has also warned against initial coin offerings (ICOs).<sup>448</sup> Both warnings came as a result of warnings by the European Supervisory Authority, ESMA.<sup>449</sup>

The Central Bank of Norway has not recognized cryptocurrencies, but it also does not prohibit its staff from owning or investing in them as per ethical guidelines from November 23, 2012.<sup>450</sup>

The Norwegian Tax Authority has issued a principle statement that bitcoins will be treated as capital property, at least for tax purposes.<sup>451</sup> Capital property legislation allows deductions for losses and taxes winnings.<sup>452</sup> Although travel currencies are exempted from the capital gains tax, bitcoins are not as the bitcoin and other virtual currencies are not recognized as travel currencies.<sup>453</sup>

<sup>453</sup> SKATTEETATEN, *supra* note 451.

All Norwegian residents are required to report taxable income (including from capital gains such as those from cryptocurrencies) in accordance with the Norwegian Income Tax Act.<sup>454</sup> Such income derived from cryptocurrencies should be filed as “other income.”<sup>455</sup>

Sales of cryptocurrencies are exempt from Norwegian value-added tax (VAT). In a 2013 statement the Norwegian Tax Authority determined that the sale of bitcoins by a commercial actor was subject to a 25% VAT as the trade in bitcoins on a web-based site is an electronic service subject to VAT and not a VAT-exempt financial service.<sup>456</sup> However, in 2015 the Court of Justice of the European Union ruled that cryptocurrencies are exempt from VAT.<sup>457</sup> This caused Norway to start a process whereby the Finance Department was to determine how bitcoins (and other cryptocurrencies) should be treated in relation to VAT.<sup>458</sup> Final guidance was issued in 2017, establishing that the sale of cryptocurrencies is exempt from VAT.<sup>459</sup>

## Russia

A draft law on digital financial assets was published by the Ministry of Finances on January 20, 2018, and introduced in the State Duma on March 20, 2018. The bill defines “mining” as activities aimed at the creation of cryptocurrency with the purpose of receiving compensation in the form of cryptocurrency. Mining is treated as an entrepreneurial activity subject to taxation if the miner exceeds the energy consumption limits established by the government for three months in a row.<sup>460</sup> As to initial coin offerings (ICO), only qualified investors are allowed to participate in them, except

<sup>460</sup> Bill No. 419059-7, Federal Law of the Russian Federation on Digital Financial Assets, [http://asozd2c.duma.gov.ru/addwork/scans.nsf/ID/E426461949B66ACC4325825600217475/\\$FILE/419059-7\\_20032018\\_419059-7.PDF?OpenElement](http://asozd2c.duma.gov.ru/addwork/scans.nsf/ID/E426461949B66ACC4325825600217475/$FILE/419059-7_20032018_419059-7.PDF?OpenElement) (in Russian), archived at <https://perma.cc/UM68-PKN8>; *see also* *The Ministry of Telecom and Mass Communications Has Proposed a Regulatory Moratorium for Industrial Miners*, RBC (Mar. 22, 2018), <https://www.rbc.ru/ins/economics/22/03/2018/5ab36c129a79477b7bc615b7> (in Russian), archived at <https://perma.cc/4DFX-M58U>.

for cases to be defined by the Central Bank, according to news reports.<sup>461</sup> Tokens and coins are classified in the bill as property and are not considered legal tender. The bill does not authorize the exchange of cryptocurrency for rubles or foreign currency. The exchange of tokens for rubles and foreign currency is allowed but only through licensed operators.<sup>462</sup> The bill also provides a definition of a “smart contract.”<sup>463</sup>

The Ministry of Telecom and Mass Communications has presented its own concept of the draft law on digital financial assets. It recommends introducing the term “industrial mining,” registering miners with the tax office, and setting forth requirements for energy consumption. It also recommends exempting miners from taxation for a period of two years to stimulate their activities. Earlier the Ministry had offered to create a special exchange platform for the miners to ensure the transparency of cryptocurrency exchange.<sup>464</sup>

Separately, amendments were introduced to the Civil Code<sup>465</sup> in order to protect the rights of the owners of cryptocurrency coins and tokens. The document defines “digital money” and “digital rights,” and provides for their judicial protection. The authors say that these regulations will allow coins and tokens to be included in a bankruptcy estate or a deceased person’s estate.<sup>466</sup>

It is expected that the legislative framework for cryptocurrency regulation will be enacted by July 1, 2018, after which the rules on the taxation of cryptocurrency operations will be introduced.<sup>467</sup>

## Serbia

The National Bank of Serbia made two announcements, one on October 2, 2014,<sup>468</sup> and the other on May 4, 2016,<sup>469</sup> to clarify that “anyone investing in bitcoins or engaging in any other activity involving virtual currencies shall do so at their own liability, bearing all financial risks and risks in terms of noncompliance with regulations governing foreign exchange operations, taxation, trade, etc.”<sup>470</sup> The Bank explained that bitcoin is not legal tender in Serbia and cannot be subject to sale and purchase by banks or licensed exchange dealers. The Bank said that a particular issue is the use of virtual currency to acquire other goods and services, adding that the law requires prices to be expressed in Serbian dinars and that expressing the prices of goods or services in virtual currency would be against the provisions of the law.<sup>471</sup> The Bank said it would consider, in cooperation with other state authorities, whether there is any need for designing a regulatory or other response in relation to cryptocurrencies.<sup>472</sup>

## Switzerland

The Swiss Canton of Zug is trying to establish itself as a hub for cryptocurrencies and Fintech start-ups. On November 2, 2017, the Commercial Register Office in the Canton of Zug started accepting bitcoin and ether as payment for administrative costs.<sup>473</sup> Furthermore, the Commercial Register accepts cryptocurrencies as a contribution in kind for purposes of forming a company.<sup>474</sup> In the city of Zug, municipal services (resident registration) of up to CHF200 (about US\$210) can be paid with bitcoin.<sup>475</sup>

On January 1, 2018, the municipality of Chiasso, in the Swiss Canton of Ticino, started accepting bitcoin as tax payments for amounts of up to CHF250 (around US\$263).<sup>476</sup>

On February 16, 2018, the Swiss Financial Market Supervisory Authority (Eidgenössische Finanzmarktaufsicht, FINMA) published guidelines on the regulatory treatment of ICOs,<sup>477</sup> which complement its earlier FINMA Guidance from September 2017.<sup>478</sup> Currently, there is no ICO-specific regulation, nor is there relevant case law or consistent legal doctrine.<sup>479</sup> FINMA stated that due to the fact that each ICO is designed in a different way, it must be decided on a case-by-case basis whether and which financial regulations are applicable.

In an ICO, investors receive blockchain-based coins or tokens in exchange for the funds they transfer. The tokens are created and stored either on a blockchain specifically created for the ICO or on a pre-existing blockchain.<sup>480</sup> FINMA differentiates between payment tokens (cryptocurrencies), utility tokens, and asset tokens. Payment tokens (cryptocurrencies) are defined as tokens that are used as a means of payment or as a means of money or value transfer. Utility tokens are those that provide digital access to an application or service by means of a blockchain-based infrastructure. Asset tokens represent assets such as a debt or an equity claim against the issuer. According to FINMA, asset tokens are analogous to equities, bonds, and derivatives.<sup>481</sup>

Operators of financial market infrastructures are subject to authorization by FINMA.<sup>482</sup> If the tokens received in an ICO qualify as securities, trading will require authorization. Securities are defined as “standardised certificated or uncertificated securities, derivatives and intermediated securities which are suitable for mass standardised trading,”<sup>483</sup> meaning they are “publicly offered for sale in the same structure and denomination or are placed with more than 20 clients, insofar as

<sup>481</sup> *Id.* at 3, no. 3.1.

<sup>482</sup> Finanzmarktinfrastrukturgesetz [FinfraG] [Financial Market Infrastructure Act] [FMIA], June 19, 2015, SYSTEMATISCHE RECHTSSAMMLUNG [SR] [SYSTEMATIC COLLECTION OF LAWS] 958.1, art. 4, <https://www.admin.ch/opc/de/classified-compilation/20141779/201708010000/958.1.pdf>, archived at <http://perma.cc/5F64-2WFF>, unofficial English translation available at <https://www.admin.ch/opc/en/classified-compilation/20141779/201708010000/958.1.pdf>, archived at <http://perma.cc/WT73-EMWN>.

<sup>483</sup> FMIA art. 2, let. b.

they have not been created especially for individual counterparties.<sup>484</sup> FINMA does not treat payment tokens or utility tokens whose sole purpose is to confer digital access rights as securities. However, utility tokens that have an additional investment purpose or a sole investment purpose at the time of issue, as well as asset tokens that are standardized and suitable for mass standardized trading, are classified as securities.<sup>485</sup>

Funds raised in an ICO generally do not qualify as deposits within the meaning of the Banking Act. However, if there are liabilities with debt capital character, for example a promise to return capital with a guaranteed return, then such an ICO would require the organizer to obtain a banking license.<sup>486</sup> When assets collected as part of the ICO are managed externally by third parties, the provisions of the Collective Investment Schemes Act apply.<sup>487</sup> Provisions on combating money laundering and terrorist financing, which give rise to a range of due diligence requirements, apply to the ICO of a payment token (cryptocurrency) as soon as the tokens can be technically transferred on a blockchain infrastructure.<sup>488</sup> In addition, the exchange of a cryptocurrency for fiat money or a different cryptocurrency as well as the offering of services to transfer tokens if the service provider maintains the private key (custody wallet provider) equally trigger the due diligence requirements according to the Anti-Money Laundering Act.<sup>489</sup>

In September 2017, FINMA closed down the unauthorized providers of the fake cryptocurrency “E-Coin”, liquidated the companies, and issued a general warning about fake cryptocurrencies to investors.<sup>490</sup> Furthermore, three other companies were put on FINMA’s warning list due to suspicious activity and eleven investigations were conducted into other presumably unauthorized business models relating to such coins.<sup>491</sup>

<sup>491</sup> *Id.*

In Switzerland, the individual cantons, the Swiss states, are obligated to levy income tax and wealth tax on the total property (assets and rights with a cash value) of taxpayers that are resident in their canton.<sup>492</sup> Tax rates vary between the individual cantons. Cryptocurrencies are treated like foreign currencies for tax purposes and are subject to wealth tax.<sup>493</sup> Holders of bitcoin or other cryptocurrencies are taxed at the rate determined by the tax authorities on December 31 of the fiscal year. As an example, the tax rate for bitcoin determined on December 31, 2017, by the Swiss Federal Tax Administration was CHF13,784.38 (about US\$14,514).<sup>494</sup> This rate is a recommendation for the cantonal tax authorities.

In January 2018, the Swiss State Secretariat for International Finance (Staatssekretariat für internationale Finanzfragen, SIF) reported that it would set up a working group on blockchain and ICOs.<sup>495</sup> The working group will work together with the Federal Ministry of Justice and FINMA and involve interested businesses. It will study the legal framework for financial sector-specific use of blockchain technology with a particular focus on ICOs and report back to the Federal Council, the Swiss government, by the end of 2018.

## Ukraine

On November 30, 2017, the financial regulators of Ukraine issued a joint statement on the status of cryptocurrencies in the country. According to the statement, cryptocurrencies cannot be classified as money, foreign currency, a means of payment, electronic money, securities, or a money surrogate. The regulators also stated that they continue to work on defining the legal status of cryptocurrencies and the legislative regulation of transactions involving them. The regulators warned about the extremely high probability of losses in dealing with cryptocurrencies and said all investors in cryptocurrencies should realize that they are acting at their own peril and risk.<sup>496</sup>

<sup>496</sup> Press Release, National Bank of Ukraine, Joint Statement of Financial Regulators on the Status of Cryptoassets in Ukraine (Nov. 30, 2017), [https://bank.gov.ua/control/uk/publish/printable\\_article.jsessionid=175FC525F862C3D896D522CFC9CC47BB?art\\_id=59735329&showTitle=true](https://bank.gov.ua/control/uk/publish/printable_article.jsessionid=175FC525F862C3D896D522CFC9CC47BB?art_id=59735329&showTitle=true) (in Ukrainian), archived at <https://perma.cc/K8WF-KS5W>; see also *Cryptocurrency in the Ukraine – the Position of the Authorities*, NEXUS FINANCIAL CONSULTING (Dec. 1, 2017), <https://www.nexus.ua/novosti-offshornogo-biznesa/ukraina/5218-kriptovalyuty-v-ukraine-pozitsiya-vlastej> (in Russian), archived at <https://perma.cc/V3SC-3UFL>.

On January 11, 2018, the cybersecurity unit of the National Security and Defense Council issued a statement saying that Ukraine can no longer allow the uncontrolled turnover of cryptocurrency on its territory and that the Council plans to create a working group to develop the regulatory framework, determine the regulatory body and the procedures for monitoring, identifying and taxing transactions with cryptocurrency.<sup>497</sup> On January 30, 2018, the head of the cybercrime department of the Police stated that circulation of cryptocurrencies must be banned if its legal status is not regulated in the near future.<sup>498</sup> In March of 2018 the government approved supplementing the classification of economic activities with a paragraph on cryptocurrency mining.<sup>499</sup>

In late 2017 Ukrainian MPs introduced two alternative draft bills that would regulate cryptocurrencies, one of which would define them as goods and the other as financial assets. However, both drafts were rejected by the country's financial regulators.<sup>500</sup>

## Middle East and North Africa

### Algeria

The 2018 Financial Law of Algeria has prohibited the use of any cryptocurrencies. It stipulates:

The purchase, sale, use, and possession of so-called virtual currency are prohibited. A virtual currency is one used by Internet users over the Internet. It is characterized by the absence of physical support such as coins, paper money, or payments by check or credit card.

Any violation of this provision is punishable in accordance with the laws and regulations in force.<sup>501</sup>

### Bahrain

The governor of the Central Bank of Bahrain, Rasheed Al Maraj, has issued a warning against cryptocurrencies, especially bitcoin. During a parliamentary session that took place in the Shura Council, Al Maraj declared that the bitcoin is not recognized by any financial institution. He also mentioned that using bitcoin in Bahrain is illegal; however, Bahraini citizens have the right to invest in cryptocurrencies outside Bahrain.<sup>502</sup>

### Egypt

The Central Bank of Egypt issued a warning in January 2018 against the trading of cryptocurrencies, such as bitcoin, due to the extremely high risk associated with such currencies. The Central Bank also asserted that commerce within the Arab Republic of Egypt is confined only to the official paper currencies approved by the Bank.<sup>503</sup>

Egypt's Dar al-Ifta, the primary Islamic legislator in Egypt, has issued a religious decree classifying commercial transactions in bitcoin as *haram* (prohibited under Islamic law). Dar al-Ifta has stated that cryptocurrencies could damage national security and central financial systems, and could also be used to fund terrorism and terrorists activities.<sup>504</sup>

## Iran

The Central Bank of Iran (CBI) officially announced on April 22, 2018, that it has prohibited the handling of cryptocurrencies by all Iranian financial institutions, including banks and credit institutions. The decision also bans currency exchanges from buying and selling virtual currencies or adopting measures to facilitate or promote them.<sup>505</sup>

The CBI's action was in line with Iran's recent efforts to address deficiencies in its policies on anti-money laundering and combating the financing of terrorism, with the aim of complying with the action plan of the Financial Action Task Force on Money-Laundering (FATF). The FATF, an intergovernmental organization established to combat international money-laundering and terrorist financing, will determine at its plenary meeting in June 2018 whether to remove Iran from the FATF list of Non-Cooperative Countries or Territories.<sup>506</sup> Previously, the CBI had only sought to warn people of the potential risks inherent in cybercurrencies,<sup>507</sup> although a directive passed by the Money and Credit Council, the most important policy decision-making organ of the CBI, "[had] deemed non-physical and virtual transactions against the law, meaning that Iranian [currency exchanges could] not deal in cryptocurrencies."<sup>508</sup>

The Bank's decision to ban the use of cryptocurrencies by financial institutions is a blow for those in Iran who viewed virtual currencies as a means of overcoming problems related to the banking industry and international sanctions, and who see them as "currently shaping the future of banking" and, when precisely and transparently regulated, of preventing people in the country from buying and selling them secretly and using them fraudulently.<sup>509</sup> Before the ban was announced, the CBI's Information Technology Chief had reported that, along with the adoption of a framework that

should be adhered to for using cryptocurrencies, the Central Bank was considering the adoption of a national virtual currency, either to be generated by the Central Bank or another entity.<sup>510</sup> One of the motivations for developing such a currency was that it could potentially be used to replace the US dollar, an attractive prospect for Iran because US sanctions over Iran's nuclear program bar Iran from using the US financial system.<sup>511</sup>

## Iraq

The Iraqi Central Bank has issued a statement prohibiting the use of cryptocurrencies. It stated that currency traders who carry out transactions in cryptocurrencies will be punished by penalties cited in the country's anti-money laundering law.<sup>512</sup>

## Israel

Israel's Supervision on Financial Services (Regulated Financial Services) Law 5776-2016 requires persons engaging in providing services involving "financial assets" to obtain a license from the Supervisor of Financial Services.<sup>513</sup> The definition of "financial assets" includes "virtual currency."<sup>514</sup> A license will generally be issued to an Israeli citizen or a resident who has reached the age of majority, is legally competent, and has not been declared bankrupt or, in the case of a corporation, is not required to dissolve. Additional licensing requirements include that the licensee has a minimum specified amount of equity and, if an individual, has not been convicted of an offense that due to its nature makes the licensee unfit to handle financial transactions.<sup>515</sup>

A statement issued by Bank of Israel and several regulatory agencies on February 19, 2014, warned the public against dealing in virtual currencies. The warning laid out the dangers associated with trading in virtual currencies, including fraud, money laundering, and financing of terrorism, among others.<sup>516</sup> In addition, the Bank of Israel said in a January 2018 statement that "it would not recognize virtual currencies such as bitcoin as actual currency and . . . it was difficult to devise

<sup>512</sup> Statement, Central Bank of Iraq, Bitcoin (Dec. 3, 2017), <https://cbi.iq/news/view/512> (in Arabic), archived at <https://perma.cc/JG54-PDHV>.

<sup>513</sup> Supervision on Financial Services (Regulated Financial Services) Law 5776-2016, §§ 2 & 12, SEFER HAHUKIM [BOOK OF LAWS, official gazette] 5776 No. 2570 p. 1098, *as amended* (in Hebrew).

<sup>514</sup> *Id.* § 11A, subsection (7) of the definition of "financial asset."

<sup>515</sup> *Id.* § 15.

<sup>516</sup> *Id.* ¶ 4, Bank of Israel Capital Market, Insurance and Saving Branch, Tax Authority, Securities Authority and the Prevention of Money Laundry and Financing of Terrorism Authority, Public Announcement Regarding Possible Risks Contained in Virtual Coins Such as Bitcoin (Feb. 19, 2014), <https://taxes.gov.il/About/PublicAnnouncements/PublishingImages/190214/odaa190214.pdf> (in Hebrew), archived at <https://perma.cc/VQ7Z-GDRQ>.

regulations to monitor the risks of such activity to the country's banks and their clients," according to Reuters.<sup>517</sup>

Although virtual currencies are not recognized as actual currency by the Bank of Israel, the Israel Tax Authority has proposed that the use of virtual currencies should be considered as a "means of virtual payment" and subject to taxation.<sup>518</sup> Specifically, for the purpose of income tax and value added tax requirements, virtual currency is viewed as "an asset" and is taxed in accordance with relevant transaction classifications under the Income Tax Ordinance (New Version), 1961, and the Value Added Tax Law, 5736-1975.<sup>519</sup> Accordingly,

[u]nlike a regular currency, the Israel Tax Authority will regard an increase in the value of a cryptocurrency as a capital gain rather than an exchange fluctuation, making it subject to capital gains tax. Individual investors will not be liable for value-added tax, but anyone engaging in cryptocurrency mining will be classified as a "dealer" and subject to VAT, according to the circular. Anyone trading as a business will be classified as a "financial institution" for tax purposes, meaning that they will be unable to reclaim VAT on expenses but will be subject to an extra 17 percent "profit tax" applied to financial institutions.<sup>520</sup>

The Israel Tax Authority requires documentation of trade transactions involving virtual currency to enable verification of their existence and scope.<sup>521</sup>

## Jordan

In 2014, the Central Bank of Jordan (CBJ) warned the public against the use of bitcoin and sent out a press release to the media that stated:

Recently, a global phenomenon of trading a virtual currency called bitcoin became active around the world. CBJ seeks to protect citizens and the investors, by warning them that virtual currencies are not legal tender and there is no obligation on any central bank in the world or any government to exchange its value for real money issued by them nor backed by underlying international commodities or gold.<sup>522</sup>

## Kuwait

Kuwait's Ministry of Finance does not recognize cryptocurrencies for purposes of official commercial transactions. Similarly, the Central Bank of Kuwait (CBK) prohibits the banking sector and companies under its control from trading in cryptocurrencies. The prohibition includes acceptance of cryptocurrency usage in e-payment transactions, and mediation between the parties to cryptocurrency transactions.<sup>523</sup> The CBK has asked the Ministry of Commerce and Industry to warn consumers about the risks of cryptocurrencies such as bitcoin.<sup>524</sup>

In January 2018, the CBK confirmed news that it was creating an infrastructure for the financial and banking sector in the country including the issuance of an e-currency, which it distinguished from virtual currencies. The establishment of a local digital currency will fall under the umbrella of e-payments, the statement said. The Central Bank highlighted that the local digital currency will have the same characteristics as paper money, such as an issuance number. It will also be monitored by the Kuwaiti government. Furthermore, it could be exchanged with other currencies as well as used to pay for goods and services.<sup>525</sup>

## Lebanon

On December 19, 2013, the Banque du Liban (BDL), the Lebanese Central Bank, issued a notice to the country's banks and financial institutions warning them of the dangers of using cybercurrencies, especially bitcoin. Among other concerns, the notice stated that "the platforms and networks used for the issuance and trading in such currencies are not subject to any laws or regulations."<sup>526</sup>

Riad Salameh, Governor of the BDL announced in October 2017 that the institution intended to launch its own cybercurrency. He is quoted as saying:

We understand that electronic currency will play a prominent role in the future. But BDL must first make the necessary arrangement before taking this step and develop [a] protection system from cybercrime. Both the Special Investigation Commission and Banking Control Commission are cooperating to prevent such electronic crimes.<sup>527</sup>

<sup>526</sup> Notice No. 900, 19 Dec. 2013, Banque du Liban, <http://www.bdl.gov.lb/news/more/5/111/65> (in Arabic), archived at <https://perma.cc/XAW8-FT7N>.

<sup>527</sup> Brooke Anderson, *Salameh: Central Bank to Launch Digital Currency*, THE DAILY STAR (Oct. 27, 2017), <http://www.dailystar.com.lb/Business/Local/2017/Oct-27/424064-salameh-central-bank-to-launch-digital-currency.ashx>, archived at <https://perma.cc/57JH-T5R8>.

Salameh explained that the new currency will be monitored by the BDL and be subject to Lebanese law, but did not state how this will be done or provide a time frame.<sup>528</sup>

Salameh also again expressed his opposition to the use of bitcoin, explaining that its use, which is not regulated, constitutes a threat to consumers and to the payment system in Lebanon.<sup>529</sup>

## Morocco

In a press release posted on its official website, the Moroccan Exchange Office informed the public that the transactions effectuated through virtual currencies constitute a violation of the exchange regulations and are subject to penalties and fines provided by the texts in force.<sup>530</sup>

The Office called on the persons concerned to abide by the exchange regulations, which provide that financial transactions with foreign entities must be effectuated through approved intermediaries and with foreign currencies listed by the Bank Al-Maghrib.

The release also warns of the risks associated with the use of a virtual system of payment that is not backed by a financial institution.

The release finally states that the Exchange Office, in collaboration with the Bank of Al-Maghrib and the Professional Grouping of the Banks of Morocco, are following with interest the evolution of virtual currencies in Morocco.

The release does not bear a date but media reports indicate that it was issued in November 2017.<sup>531</sup>

## Oman

The Central Bank of Oman's board issued a press release in December 2017 declaring that there are no policies or guidelines to regulate "digital currencies" or "cryptocurrencies." It also urged Omani citizens to be cautious when dealing with cryptocurrencies, asserting that the Central Bank is not responsible for any financial consequences stemming from dealings in cryptocurrencies.<sup>532</sup>

## Qatar

In February 2018 the Supervision and Control of Financial Institution Division at Qatar's Central Bank issued a circular to all banks operating in Qatar warning against trading in bitcoin. The circular described bitcoin as illegal and unsupported by any central bank or government. It also stated that trade in cryptocurrencies involves high risks of price volatility and the risk of being used in financial crimes. Finally, the circular prohibited all banks operating in Qatar from dealing with cryptocurrencies, subject to penalties for violators.<sup>533</sup>

## Saudi Arabia

The Saudi Arabian Monetary Agency (SAMA) has issued a warning against bitcoin because it is not being monitored or supported by any legitimate financial authority.<sup>534</sup>

In October 2017, SAMA announced that it will implement a pilot project to issue a local digital currency (Riyal) that will only be used in transactions among banks.<sup>535</sup>

## United Arab Emirates

Under article D.7.3 of the Regulatory Framework for Stored Values and an Electronic Payment System, issued by the Central Bank of the United Arab Emirates in January 2017, all transactions in "virtual currencies" (encompassing cryptocurrencies in Arabic) are prohibited.<sup>536</sup>

In January 2018, the governor of the UAE Central Bank, Mubarak Rashid Al-Mansouri, reiterated a warning against trading in cryptocurrencies. According to news reports, when Al-Mansouri was asked about his views concerning cryptocurrencies, he said that citizens should avoid these types of currencies because they are not approved by the Central Bank. Previously, in October 2017, Al-Mansouri issued a warning pertaining to cryptocurrencies, which said that such currencies were susceptible to use in money laundering or terrorism funding. He also added that cryptocurrencies such as bitcoin cannot be monitored by any legitimate financial authority.<sup>537</sup>

## Sub-Saharan Africa

### Ghana

In January 2018, the Bank of Ghana issued a brief notice to banks and the general public advising against the use of “virtual or digital currencies, also known as cryptocurrencies,” mainly because such currencies and the entities that facilitate their transactions are not sanctioned by the government.<sup>538</sup> The notice stated that

[t]he Bank of Ghana wishes to notify the general public that these activities in digital currency are currently not licensed under the Payments System Act 2003 (Act 662).

...

The public is therefore strongly encouraged to do business with only institutions licensed by the Bank of Ghana to ensure that such transactions fall under our regulatory purview.<sup>539</sup>

### Kenya

In December 2015, the Central Bank of Kenya issued a public notice titled “Caution to the Public on Virtual Currencies such as bitcoin.”<sup>540</sup> The notice stated that virtual currencies are not legal tender and remain unregulated in Kenya, which means that “no protection exists in the event that the platform that exchanges or holds the virtual currency fails or goes out of business.”<sup>541</sup> It outlined the risks associated with the use, holding of, and/or trading of virtual currencies as follows:

- Transactions in virtual currencies such as bitcoin are largely untraceable and anonymous making them susceptible to abuse by criminals in money laundering and financing of terrorism.
- Virtual currencies are traded in exchange platforms that tend to be unregulated all over the world. Consumers may therefore lose their money without having any legal redress in the event these exchanges collapse or close business.
- There is no underlying or backing of assets and the value of virtual currencies is speculative in nature. This may result in high volatility in value of virtual currencies thus exposing users to potential losses.<sup>542</sup>

<sup>541</sup> *Id.*

<sup>542</sup> *Id.*

The notice concluded with a warning to the public to “desist from transacting in Bitcoin and similar products.”<sup>543</sup>

## Lesotho

In November 2017, the Central Bank of Lesotho issued a press statement regarding the growing popularity of cryptocurrencies.<sup>544</sup> In it the Bank warned the public of the risks associated with the use of cryptocurrencies, given the fact that the Bank “does not oversee, supervise or regulate the cryptocurrencies, their systems, promoters or intermediaries,” and stated that

[a]ny activities related to the acquisition, trading or use of cryptocurrencies is at the user’s sole and independent risk. Members of the public are therefore notified that in the event of losses or similar eventualities, there shall not be recourse to the Central Bank of Lesotho.<sup>545</sup>

The Bank also warned the public of the risk of exposure to criminal charges that may result from the use of cryptocurrencies, stating

it is important to highlight that cryptocurrencies expose participants to violation of:

- Anti-money laundering and combating of terrorist financing laws;
- Tax laws; and
- Exchange control laws

Which are prosecutable transgressions.<sup>546</sup>

The Bank issued a follow-up statement in February 2018, where in addition to providing information that reinforced the contents of the previous statement, it noted that cryptocurrencies are neither legal tender in Lesotho nor considered foreign currency.<sup>547</sup> It also barred the operation of individuals and entities that promote investment in cryptocurrency because any and all investment advisors must be licensed.<sup>548</sup>

<sup>548</sup> *Id.*

## Mozambique

On January 8, 2018, the Mozambican Federal Reserve Bank (Banco de Moçambique), issued a notice (Comunicado) in its role as supervisor of the financial system in the country informing citizens that a decentralized and convertible virtual currency called bitcoin is circulating in the national territory.<sup>549</sup>

The Bank clarified that it does not regulate or supervise any activity or transaction carried out through bitcoins and is not responsible for any impacts of transactions related to bitcoin, because this currency does not have legal support and is not issued by the national monetary authority, the Bank.

The notice further stated that companies that negotiate bitcoins are not regulated, authorized, or supervised by the Bank; that such virtual currency offers no security, being vulnerable to fraud and other crimes perpetrated using computer means; that its price is highly volatile; and that it allows for the execution of anonymous transactions, favoring criminal activities.<sup>550</sup>

## Namibia

In September 2017, the Bank of Namibia issued a position paper titled “Position on Distributed Ledger Technologies and Virtual Currencies in Namibia”<sup>551</sup> in which it noted that virtual currencies are not considered legal tender and are currently unregulated in the country.<sup>552</sup> The Bank outlined the risks associated with the use of virtual currencies, including credit risks, liquidity risks, operational risks, and legal risks.<sup>553</sup> It warned that individuals who hold or trade in virtual currencies do so “at their own risk and should exercise caution.”<sup>554</sup> The Bank further stated that because the country’s relevant laws do not envisage their existence, virtual currency exchanges cannot be established or operate in Namibia.<sup>555</sup>

## South Africa

At present, there are no specific laws or regulations governing the use or trading of virtual currencies (VCs) in South Africa.<sup>556</sup> However, in December 2014 the South African Reserve Bank (SARB), the central banking institution whose responsibilities include formulating and implementing monetary policy and issuing banknotes and coins in the country, issued a position paper on virtual currencies.<sup>557</sup>

The position paper expressly stated that only the SARB may issue legal tender and that decentralized convertible virtual currencies (DCVCs), including bitcoin and litecoin, are not legal tender in South Africa.<sup>558</sup> This means that “any merchant or beneficiary may refuse VCs as a means of payment.”<sup>559</sup>

The SARB warned of various risks associated with the use of VCs, including issues relating to payment systems and payment service providers, price stability, money-laundering and terrorism financing, consumer risk, circumvention of exchange control regulations, and financial stability.<sup>560</sup> For instance, the position paper warns about risks that consumers are exposed to mainly due to the unregulated nature of VCs and the wild fluctuations in prices, which could result in heavy financial losses.<sup>561</sup> This does not account for other risks such as losses incurred as the result of a security breach, fraud, and the absence of insurance mechanisms to cover losses, the SARB noted.<sup>562</sup>

Regarding the abovementioned risks, the SARB stated that “no legal protection or recourse is afforded to users, traders or intermediaries of VCs and such activities are performed at the end-users sole and independent risk.”<sup>563</sup>

<sup>558</sup> SARB, *Position Paper on Virtual Currencies*, *supra* note 557, §§ 2.1 & 3.2.

<sup>559</sup> *Virtual Currencies / Crypto-currencies*, SARB, *supra* note 556.

<sup>560</sup> SARB, *Position Paper on Virtual Currencies*, *supra* note 557, § 4.3.

<sup>561</sup> *Id.*

<sup>562</sup> *Id.*

<sup>563</sup> *Virtual Currencies / Crypto-currencies*, SARB, *supra* note 556.

While the SARB's position paper warned individuals against involvement in trading or holding VCs, it also noted that it does not see VCs as posing any systemic threat at this time:

Values (\$6,25 billion) and volumes (60 000 daily average) currently traded in Bitcoin (the leading DCVC) remain insignificant when compared to the formal payment system and the larger economy. VCs are not considered legal tender in most jurisdictions. A multitude of independent variants of VCs exist and are being developed, all aimed at the same niche market. Based on the aforementioned, VCs (particularly DCs), at this stage of their development, are neither broad nor evasive enough to be classified as systemic.<sup>564</sup>

However, it emphasized the need for constant monitoring of DCVCs and said it “reserves the right to change its position should the landscape warrant regulatory intervention.”<sup>565</sup>

On April 6, 2018, the South African Revenue Services (SARS) issued a clarification on the tax status of VCs. SARS noted that it “will continue to apply normal income tax rules to cryptocurrencies and will expect affected taxpayers to declare cryptocurrency gains as part of their taxable income.”<sup>566</sup> Taxpayers must therefore declare all their cryptocurrency income and failure to do so could result in imposition of interest and penalties.<sup>567</sup> SARS appears to have not made a determination whether gains made from trading cryptocurrency are subject to income tax or capital gains tax.<sup>568</sup> It states that:

Whilst not constituting cash, cryptocurrencies can be valued to ascertain an amount received or accrued as envisaged in the definition of “gross income” in the Act. Following normal income tax rules, income received or accrued from cryptocurrency transactions can be taxed on revenue account under “gross income”.

Alternatively such gains may be regarded as capital in nature, as spelt out in the Eighth Schedule to the Act for taxation under the CGT paradigm.

Determination of whether an accrual or receipt is revenue or capital in nature is tested under existing jurisprudence (of which there is no shortage).<sup>569</sup>

The amount of tax accrued to a person could differ a great deal depending on whether gains in VCs are taxed as income or capital gains.<sup>570</sup>

## Swaziland

In August 2017 the Central Bank of Swaziland issued a press release regarding virtual currencies.<sup>571</sup> The Bank noted that cryptocurrency does not enjoy legal-tender status in Swaziland.<sup>572</sup> The Bank also noted that bitcoin, a form of cryptocurrency currently being marketed and traded in Swaziland, is currently not regulated and this makes holding or trading the currency risky:

[D]ue to its nature as a cryptocurrency, there are no restrictions, disclosures or regulatory compliance applicable to transactions executed using Bitcoin and yet, like any other currency, it can be used for illegal purposes or to facilitate fraudulent activity. In fact, the anonymity and speed of execution in transacting with cryptocurrency makes it more susceptible to abuse by unscrupulous persons. This presents a risk to users of the currency because there is no protection or legal recourse available from any institution including the Central Bank in the event that the user suffers financial loss from the use of Bitcoin or any other cryptocurrency.<sup>573</sup>

## Uganda

In February 2017, the Bank of Uganda (BoU) issued a warning against the use of cryptocurrencies in general and the services of an unlicensed entity called One Coin Digital Money, citing the absence of investor protection schemes and relevant regulatory mechanisms.<sup>574</sup> The Bank warned that “the entity ‘ONE COIN DIGITAL MONEY’ is not licensed by the BoU under the Financial Institutions Act, 2004 and is therefore conducting business outside the regulatory purview of the BoU,” and that the “public is strongly encouraged to do business transactions with only licensed financial institutions.”<sup>575</sup>

The Bank also warned that “whoever wishes to invest their hard earned savings in Cryptocurrency forms such as One-coin, Bitcoin, Ripple, Peercoin, Namecoin, Dogecoin, Litecoin, Bytecoin, Primecoin, Blackcoin or any other forms of Digital Currency is taking a risk in the financial space where there is neither investor protection nor regulatory purview.”<sup>576</sup>

## Zambia

In February 2018, the Zambia Securities and Exchange Commission issued a notice on cryptocurrencies and other digital products.<sup>577</sup> The Commission urged “any individuals or entities that are currently investing in or intend to invest in cryptocurrencies and related products/assets to exercise restraint and caution as they do so as the products/assets are largely unregulated and not subject to the jurisdiction of the Commission.”<sup>578</sup> While it did not ban their operation, the Commission cautioned platforms that facilitate cryptocurrency transactions “to ensure that they are not in any way abrogating any part of the [Securities] Act and that those that meet the description of securities in accordance with the Act are registered with the Commission.”<sup>579</sup>

## Zimbabwe

In a December 2017 statement the Reserve Bank of Zimbabwe noted that virtual currencies are not legal tender in Zimbabwe and remain unregulated.<sup>580</sup> It issued the following warning to the public regarding the risks presented with the use of cryptocurrencies:

[T]he use of and trading in cryptocurrencies or virtual currencies is not regulated by the country’s laws and presents risks such as money laundering, terrorism financing, tax evasion and fraud. Under the existing legal and regulatory dispensation, any person who invests in virtual currencies or participates in any transaction involving virtual currencies, does so at own risk and will not have legal protection from, or recourse against, any regulatory authority.<sup>581</sup>

## Central Asia

### Kazakhstan

On March 30, 2018, the head of the Kazakhstan National Bank, Daniyar Akishev, stated that the National Bank had a very conservative position on the issue of cryptocurrencies and welcomed only strict restrictions because of multiple issues related to consumer protection, money laundering, and tax avoidance. He added that legislative amendments had already been prepared to prohibit the purchase and sale of cryptocurrencies for national currency, ban the activity of exchanges, and ban any type of mining.<sup>582</sup> No information was found indicating that the proposed amendments have been enacted.

### Uzbekistan

On February 19, 2018, President Shavkat Mirziyoyev signed a decree<sup>583</sup> instructing the Central Bank of Uzbekistan and several other agencies to develop a legislative framework for the use of digital money on the territory of Uzbekistan by September 1, 2018.<sup>584</sup> In September of 2017 the Central Bank expressed the opinion that it was not advisable to allow operations with cryptocurrencies because of the possibility of terrorism financing and other criminal activities.<sup>585</sup>

### Kyrgyzstan

On January 17, 2018, the head of Kyrgyzstan's National Bank, Tolkunbek Abdygulov, stated that the Bank did not plan to impede the development of the cryptocurrency market in Kyrgyzstan. He noted that it is very difficult to ban something that the Central Bank does not issue and that citizens of Kyrgyzstan investing in cryptocurrency do so at their own risk and peril.<sup>586</sup> In October of 2017 the Central Bank reportedly stated that it was not considering introducing any prohibitive or restrictive measures regarding the mining of cryptocurrency.<sup>587</sup>

## Tajikistan

On January 15, 2018, the National Bank of Tajikistan issued a statement warning the citizens of the republic about the risks associated with the use of cryptocurrency. The Bank believes that, due to their anonymity, many cryptocurrency transactions can be used for conducting doubtful operations. According to the Bank, cryptocurrency can be exposed to cyberattacks or used for money laundering and terrorist financing. The Bank also clarified that in Tajikistan cryptocurrency cannot be considered an official means of exchange or savings, or a unit of account.<sup>588</sup>

## South Asia

### Bangladesh

On December 24, 2017, the Central Bank of Bangladesh issued a cautionary notice that cryptocurrencies are illegal in Bangladesh.<sup>589</sup> According to a news report, the notice states that “[t]ransaction [sic] with this currency may cause a violation of the existing money laundering and terrorist financing regulations.”<sup>590</sup> The notice states that bitcoin transactions “are not authorized by the Bangladesh Bank or any regulatory agencies, and do not conform with the provisions under the Foreign Exchange Regulation Act, 1947; Anti-Terrorism Act, 2009; and the Money Laundering Prevention Act, 2012.”<sup>591</sup> Also, according to the notice,

[o]nline transaction [sic] of virtual currencies with any unnamed or pseudo named parties may cause a violation of the above-mentioned acts. . . . [T]ransactions through online networks involving cryptocurrency are not approved by any central payment system and as such people can be financially harmed and may face legal consequences.

Under the circumstances, the citizens have been asked to refrain from performing, assisting, and advertising all kind of transactions through virtual currencies like Bitcoin to avoid financial and legal damages.<sup>592</sup>

Law enforcement agencies, including the Foreign Exchange Police Department, Bangladesh Financial Intelligence Unit (BFIU), and Bangladesh Telecommunication Regulatory Commission (BTRC), have reportedly already held four meetings on “hunting down those using cryptocurrencies.”<sup>593</sup>

## India

The government of India stated in early 2018 that cryptocurrencies such as bitcoin are not legal tender in India.<sup>594</sup> While the government has not yet enacted a regulatory framework for cryptocurrencies,<sup>595</sup> the Reserve Bank of India (RBI) has advised caution on their use and has issued three notifications<sup>596</sup> that “cautioned users, holders and traders on the risk of these currencies and clarified that it has not given any licence or authorisation to any entity or company to operate such schemes or deals.”<sup>597</sup>

Most recently, on April 6, 2018, the RBI issued a notification prohibiting banks, lenders and other regulated financial institutions from “dealing with virtual currencies,” which stipulated that “[i]n view of the associated risks, it has been decided that, with immediate effect, entities regulated by the Reserve Bank shall not deal in VCs or provide services for facilitating any person or entity in dealing with or settling VCs. Such services include maintaining accounts, registering, trading, settling, clearing, giving loans against virtual tokens, accepting them as collateral, opening accounts of exchanges dealing with them and transfer / receipt of money in accounts relating to purchase/ sale of VCs.”<sup>598</sup> Moreover, the RBI stated that “[r]egulated entities which already provide such services shall exit the relationship within three months from the date of this circular.”<sup>599</sup> However, Deputy Governor B.P. Kanungo, in a policy press conference, did “recognize that the blockchain technology or the distributed ledger technology that lies beneath the virtual currencies has potential benefits for financial inclusion and enhancing the efficiency of the financial system” and stated that the RBI has “constituted an inter-departmental committee in Reserve Bank of India who will produce a report and they will explore the feasibility and desirability of issuing a digital currency by the central bank.”<sup>600</sup>

Reports in early 2018 indicated that the government is in the process of drafting a law to regulate trade of cryptocurrencies in India and “has formed a committee to fast track the process,” according to the *Hindustani Times*.<sup>601</sup> The government has expressed two main concerns that the law will address: “the source of money being used to trade in [cryptocurrencies]; and regulation of exchanges of VC [virtual currency] to protect the common man,” one government official was quoted as saying.<sup>602</sup>

An interdisciplinary committee, chaired by the Special Secretary (Economic Affairs), was established in April 2017 “to examine the existing framework with regard to Virtual Currencies.”<sup>603</sup> The committee has nine members including representatives from the Department of Economic Affairs, Department of Financial Services, Department of Revenue (CBDT), Ministry of Home Affairs, Ministry of Electronics and Information Technology, Reserve Bank of India, National Institution for Transforming India (NITI Aayog), and State Bank of India. The role of the committee is to

- (i) take stock of the present status of Virtual Currencies both in India and globally; (ii) examine the existing global regulatory and legal structures governing Virtual Currencies; (iii) suggest measures for dealing with such Virtual Currencies including issues relating to consumer protection, money laundering, etc.; and (iv) examine any other matter related to Virtual Currencies which may be relevant.<sup>604</sup>

On August 7, 2017, *Business Line* reported that the committee had submitted its report, but details of the report had not been made available to the public.<sup>605</sup>

On December 29, 2017, India’s Ministry of Finance released a press statement that cautioned investors about the “real and heightened” risks of trading in cryptocurrencies such as bitcoin, saying virtual currency investments are similar to “Ponzi schemes.”<sup>606</sup> According to a February 1, 2018, news report, the Minister of Finance told lawmakers in Parliament that “[t]he government does not consider cryptocurrencies legal tender or coin and will take all measures to eliminate use of these crypto-assets in financing illegitimate activities or as part of the payment system,” but

“[t]he government will explore use of blockchain technology proactively for ushering in [the] digital economy.”<sup>607</sup>

On November 13, 2017, the Supreme Court of India admitted under article 32 of the Constitution a Public Interest Litigation writ petition against the Union of India and issued a notice<sup>608</sup> to the Ministry of Finance, Minister of Law and Justice, Ministry of Electronics and Information Technology, Securities and Exchange Board of India, and Reserve Bank of India. The petition seeks “a regulatory framework to be laid down on Crypto Currency and wanted that the virtual currency be made accountable to the exchequer.”<sup>609</sup>

The Supreme Court previously heard a petition in July 2017 that sought “a similar kind of regulatory framework”:

A Public Interest Litigation [PIL] was filed (Writ Petition (Civil) no. 406 of 2017) under Article 32 of the Constitution against Union of India, Ministry of Finance and the Reserve Bank of India over the use and business of Bitcoins, Litecoins, Ethereum etc. The Supreme Court on July 14, 2017, directed the RBI and the other concerned ministries to clarify their stance and enact a bill on the same before disposing off the PIL.<sup>610</sup>

## Nepal

On August 13, 2017, Nepal Rastra Bank issued a notice that “all transactions related to or regarding bitcoins are illegal.”<sup>611</sup> In early October 2017, a police team from the Central Investigation Bureau (CIB) of the Nepal Police “for the first time arrested seven persons for allegedly running bitcoin exchange business from various parts of the country,” the *Kathmandu Post* reported.<sup>612</sup>

## Pakistan

Currently there does not appear to be any specific law that regulates cryptocurrencies or the trade in cryptocurrencies in Pakistan. In May 2017, the State Bank of Pakistan (SBP) stated that it does not recognize digital currencies.<sup>613</sup> On April 6, 2018, the SBP issued a press release cautioning the general public on the risk of virtual currencies:

[The] General Public is advised that Virtual Currencies/Coins/Tokens (like Bitcoin, Litecoin, Pakcoin, OneCoin, DasCoin, Pay Diamond etc.) are neither recognized as a Legal Tender nor has SBP authorized or licensed any individual or entity for the issuance, sale, purchase, exchange or investment in any such Virtual Currencies/Coins/Tokens in Pakistan. Further, Banks/ DFIs/ Microfinance Banks and Payment System Operators (PSOs)/ Payment Service Providers (PSPs) have been advised not to facilitate their customers/account holders to transact in Virtual Currencies/ Initial Coin Offerings (ICOs) /Tokens vide BPRD's Circular No. 03 of 2018.<sup>614</sup>

The Federal Board of Revenue (FBR) “is currently investigating the traders of digital currencies for tax evasion and money laundering,” according to news sources.<sup>615</sup> Moreover, the Federal Investigation Agency (FIA) has “launched operations against the people dealing in the cryptocurrencies,” according to a February 10, 2018, news report.<sup>616</sup>

## East Asia and the Pacific

### Australia

In August 2015, the Australian Parliament’s Senate Economic References Committee published a report titled “Digital Currency – Game Changer or Bit Player,”<sup>617</sup> following the completion of an inquiry into “how to develop an effective regulatory system for digital currency, the potential impact of digital currency technology on the Australian economy, and how Australia can take advantage of digital currency technology.”<sup>618</sup> The government responded to the Committee’s recommendations in May 2016.<sup>619</sup> This included responses regarding the tax treatment of cryptocurrencies, which noted aspects of the following actions of the Australian Taxation Office (ATO).

The ATO has published a guidance document on the tax treatment of virtual currencies.<sup>620</sup> The general guidance follows the finalization, in December 2014, of various rulings relating to the application of tax laws to bitcoin and other cryptocurrencies.<sup>621</sup> According to the guidance, transacting with cryptocurrencies is “akin to a barter arrangement, with similar tax consequences.”<sup>622</sup> This is because, in the view of the ATO, such currencies are “neither money nor

<sup>622</sup> *Tax Treatment of Crypto-Currencies in Australia – Specifically Bitcoin*, *supra* note 620.

a foreign currency.”<sup>623</sup> Individuals who engage in cryptocurrency transactions are advised to keep records of the date of transactions; the amount in Australian dollars (“which can be taken from a reputable online exchange”); what the transaction was for; and who the other party was (“even if it’s just their bitcoin address”).<sup>624</sup>

Cryptocurrencies may be considered assets for capital gains tax purposes, with the guidance stating: “Where you use bitcoin to purchase goods or services for personal use or consumption, any capital gain or loss from disposal of the bitcoin will be disregarded (as a personal use asset) provided the cost of the bitcoin is \$10,000 or less.”<sup>625</sup>

With regard to business transactions, the ATO guidance states that the Australian dollar value of bitcoins (being the fair market value) received for goods and services must be recorded as part of ordinary income, in the same way as receiving non-cash consideration under a barter transaction.<sup>626</sup> A business that purchases items using bitcoin is “entitled to a deduction based on the arm’s length value of the item acquired.”<sup>627</sup> Goods and services tax (GST) is also payable and is calculated on the market value of the goods or services, which is “ordinarily equal to the fair market value of the bitcoin at the time of the transaction.”<sup>628</sup> When a business disposes of bitcoin, there may be capital gains tax consequences. If a business gives bitcoin to an employee this may be considered either a fringe benefit (if there is a valid salary sacrifice arrangement in order to receive the bitcoin) or normal salary and wages. If an entity is in the business of mining bitcoin, or buying and selling bitcoin as an exchange service, any income derived must be included in its assessable income, and any expenses incurred may be deducted.<sup>629</sup>

The ATO has also published separate guidance on the application of the goods and services tax (GST) with respect to transactions involving digital currency.<sup>630</sup> A previous ruling regarding GST was withdrawn in December 2017 following the passage of amendments to A New Tax System (Goods and Service Tax) Act 1999 and associated regulations, which apply to transactions after July 1, 2017.<sup>631</sup> Under the amendments, sales and purchases of digital currency are not subject to GST. If a person is carrying on a business in relation to digital currency, or accepting digital

<sup>631</sup> *Goods and Services Tax Ruling: GSTR 2014/W*, ATO, <https://www.ato.gov.au/law/view/document?DocID=GST/GSTR20143/NAT/ATO/00001> (last visited Mar. 1, 2018), archived at <https://perma.cc/6YAU-SYF3>; Treasury Laws Amendment (2017 Measures No. 6) Act 2017 (Cth), <https://www.legislation.gov.au/Details/C2017A00118>, archived at <https://perma.cc/6TB9-V9QU>.

currency as a payment as part of a business, then there are GST consequences.<sup>632</sup> The changes were aimed at removing “double taxation” of digital currencies under the GST system.<sup>633</sup>

According to news reports from January 2018, the ATO is consulting with tax experts “to help it identify and track cryptocurrency transactions and ensure all taxes are being paid.”<sup>634</sup>

The Australian Securities and Investments Commission’s (ASIC’s) MoneySmart website provides information on virtual currencies and sets out various risks associated with buying, trading, or investing in such currencies.<sup>635</sup> These include the fact that there are few safeguards because the exchange platforms are generally not regulated; large fluctuations in value; possible theft by hackers; and the popularity of virtual currencies with criminals. A separate page provides information about initial coin offerings, which ASIC calls a “high-risk speculative investment.”<sup>636</sup>

In the area of anti-money laundering and counterterrorism financing (AML/CTF), the government introduced a bill in Parliament in August 2017 in order bring digital currency exchange providers under the AML/CTF regulatory regime, as recommended by the Senate committee referred to above.<sup>637</sup> The bill was enacted in December 2017 and the relevant provisions came into force on April 3, 2018.<sup>638</sup>

Under the amendments, digital currency exchanges will be required to enroll in a register maintained by AUSTRAC (Australian Transaction Reports and Analysis Centre) and implement an AML/CTF program “to mitigate the risks of money laundering as well as identify and verify the identity of their customers.”<sup>639</sup> They will also be required to report suspicious transactions and maintain certain records.

## Brunei

On December 22, 2017, the Central Bank of Brunei, Autoriti Monetari Brunei Darussalam (AMBD), released a statement reminding the public that “cryptocurrencies are not legal tender in Brunei Darussalam and are not regulated by AMBD,” and advising the public “to be vigilant and exercise extreme caution when dealing with such currencies that are privately issued.”<sup>640</sup> The press statement also added that

AMBD would like to remind the public to be careful when participating in any investment plans or financial transactions. The public is advised not to be easily enticed by any investment or financial activity advertisements, and to conduct due diligence and understand the financial products properly before participating.<sup>641</sup>

## China

China’s central bank, the People’s Bank of China (PBOC), has been conducting a study of digital currency for over three years, and has set up an Institute of Digital Money within the PBOC.<sup>642</sup> Zhou Xiaochuan, the then governor of the PBOC, addressed the current regulatory status of virtual currencies in a press conference held during the annual National People’s Congress session in March 2018, when he was stepping down. According to Zhou, Chinese regulators are not recognizing virtual currencies such as bitcoin as a tool for retail payments like paper bills, coins, or credit cards. The banking system is not accepting any existing virtual currencies or providing relevant services, he said.<sup>643</sup>

Previously, on September 4, 2017, seven central government regulators—the PBOC, the Cyberspace Administration of China (CAC), the Ministry of Industry and Information Technology (MIIT), the State Administration for Industry and Commerce (SAIC), the China Banking Regulatory Commission (CBRC), the China Securities Regulatory Commission (CSRC), and the China Insurance Regulatory Commission (CIRC) —jointly issued the Announcement on Preventing Financial Risks from Initial Coin Offerings, which banned initial coin offerings (ICOs) in China.<sup>644</sup> According to the Announcement, ICO financing that raises “so-called ‘virtual currencies’ such as Bitcoin and Ethereum” through the irregular sale and circulation of tokens is essentially public financing without approval, which is illegal.<sup>645</sup> The Announcement warned that

tokens or virtual currencies involved in ICO financing are not issued by monetary authorities and therefore not mandatorily-accepted legal tender, and thus do not have equal legal status with fiat currencies and “cannot and should not be circulated and used in the market as currencies.”<sup>646</sup>

As early as December 3, 2013, the PBOC, MIIT, CBRC, CSRC, and CIRC jointly issued a notice warning the public about the risks of bitcoin, the Notice on Precautions Against the Risks of Bitcoins.<sup>647</sup> The circular defined bitcoin as “by nature a special virtual commodity,” which “does not have equal legal status as currencies” and “cannot and should not be circulated in the market as a currency.”<sup>648</sup> According to the notice, banks and payment institutions in China are prohibited from dealing in bitcoins. Financial and payment institutions are prohibited from using bitcoin pricing for products or services or buying or selling bitcoins, nor can they provide direct or indirect bitcoin-related services, including registering, trading, settling, clearing, or other services; accept bitcoins or use bitcoins as a clearing tool; or trade bitcoins with Chinese yuan or foreign currencies.<sup>649</sup>

### **Cambodia**<sup>650</sup>

The status of cryptocurrencies in Cambodia is ambiguous. The National Bank of Cambodia (NBC) “signed an agreement with a Japanese firm . . . to develop a blockchain-based project for its own internal use, which would track interbank lending and transactions” in April 2017.<sup>651</sup> However, it only addresses interbank transactions. The NBC has “asked banks in Cambodia not to allow people to conduct transactions with cryptocurrencies.”<sup>652</sup>

At the Fourth Annual NBC Macroeconomic Conference on December 5, 2017, NBC Director General Chea Serey stated that activities of a handful of companies operating in Cambodia that tried to persuade people to use cryptocurrencies for everyday purchases and other financial transactions were “not legal as digital currencies are not issued or backed up by any government.”<sup>653</sup> However, she also stated that “digital currencies are not illegal in the Kingdom”

and “asked users to be wary of them and extremely careful when using them.”<sup>654</sup> In a December 29, 2017, press release the NBC reaffirmed that it “never allowed the purchase-sale and circulation of any form of cryptocurrencies.”<sup>655</sup>

## Hong Kong

On February 9, 2018, Hong Kong’s Securities and Futures Commission (SFC) alerted investors to the potential risks of dealing with cryptocurrency exchanges and investing in initial coin offerings (ICOs).<sup>656</sup> In the alert, the SFC said it has taken regulatory action against a number of cryptocurrency exchanges and issuers of ICOs. The SFC has warned cryptocurrency exchanges in Hong Kong or with connections to Hong Kong that they should not trade cryptocurrencies, which it characterized as “securities” as defined in the Securities and Futures Ordinance, without a license. The SFC also wrote to seven ICO issuers and most of them confirmed compliance with the SFC’s regulatory regime or immediately ceased to offer tokens to Hong Kong investors. The SFC stated it would continue to police the market and engage in enforcement actions when necessary, and also urged market professionals to do proper gatekeeping to prevent fraud or dubious fundraising, and to assist the SFC in ensuring compliance with the law.<sup>657</sup>

The new alert follows a statement on ICOs issued by the SFC on September 5, 2017.<sup>658</sup> That statement explained that, depending on the facts and circumstances of an ICO, digital tokens that are offered or sold may be “securities” as defined in the Securities and Futures Ordinance, and therefore subject to the securities laws of Hong Kong.<sup>659</sup> According to the statement,

[w]here the digital tokens involved in an ICO fall under the definition of “*securities*”, dealing in or advising on the digital tokens, or managing or marketing a fund investing in such digital tokens, may constitute a “*regulated activity*”. Parties engaging in a “*regulated activity*” are required to be licensed by or registered with the SFC irrespective of whether the parties involved are located in Hong Kong, so long as such business activities target the Hong Kong public.<sup>660</sup>

On January 8, 2014, in replying to a question raised at the meeting of the Legislative Council on the use of bitcoin, the Secretary for Financial Services and the Treasury said virtual currencies

<sup>660</sup> *Id.*

such as bitcoin are not considered as legal tender but are virtual commodities in Hong Kong, and warned about the risks of using virtual currencies.<sup>661</sup> According to the Secretary,

[i]t would be quite risky to convert, trade or hold such virtual currencies as their value is not backed by any physical items, issuers or the real economy. There are specified upper limits to the overall size of the issue of such virtual currencies, but no guarantee of their convertibility into a legal tender or commodities in the real economy. Also, the price of virtual currencies may be susceptible to significant fluctuations due to individual speculative activities.<sup>662</sup>

On March 25, 2015, the Secretary responded to another question on the regulation of bitcoin trading activities raised at the meeting of the Legislative Council.<sup>663</sup> In the statement, the Secretary reiterated there were no specific regulatory measures on virtual commodities such as bitcoin in Hong Kong, but existing laws provide for sanctions against unlawful acts such as money laundering, terrorist financing, fraud, pyramid schemes, and cybercrimes, with or without virtual commodities being involved. The police will take enforcement action if they find criminal conduct involving virtual commodities by conducting patrols, including searching for relevant information via public platforms on the Internet, the Secretary said. The Hong Kong Government and financial regulators will also keep a close watch on the development of bitcoin and other virtual commodities, he said.<sup>664</sup>

## Indonesia

On January 13, 2018, Bank Indonesia (Indonesia's central bank) released a statement that warns against buying, selling, or otherwise trading in virtual currencies.<sup>665</sup> The statement includes the following:

Bank Indonesia affirms that virtual currencies, including bitcoin, are not recognized as legitimate instrument of payment, therefore not allowed to be used for payment in Indonesia. This is in line with Act No. 7/2011 on The Currency,<sup>666</sup> which states that currency shall be money of which issued by the Republic of Indonesia and every transaction that has the purpose of payment, or other obligations which need to be fulfilled

with money, or other financial transactions conducted within the territory of the Republic of Indonesia, has to be fulfilled with Rupiah.<sup>667</sup>

The statement goes on to say that ownership of virtual currency is “highly risky,” “vulnerable to bubble risks,” and “susceptible to be used for money laundering and terrorism financing.” Bank Indonesia therefore considers that such currencies “can potentially impact financial system stability and cause financial harm to society.”<sup>668</sup> It also refers to Bank Indonesia Regulation No. 18/40/PBI/2016 on Implementation of Payment Transaction Processing<sup>669</sup> and Bank Indonesia Regulation No. 19/12/PBI/2017 on Implementation of Financial Technology<sup>670</sup> in affirming that, as the payment system authority, the Bank forbids all payment system operators and financial technology operators in Indonesia from processing transactions using virtual currencies.<sup>671</sup>

This statement was supported by the Minister of Finance who, in a press conference on January 23, 2018, warned that virtual currencies are a high-risk and speculative investment and said that “[w]e will also continue to function as a government that conveys the view that it is not in accordance with the Law to be used as a means of transaction.”<sup>672</sup>

The Bank’s statement follows an earlier press release in 2014, in which it encouraged caution with respect to virtual currencies and stated that “[i]n view of the Act No. 7 Year 2012 [sic] concerning Currency and Act No. 23 Year 1999<sup>[673]</sup> which has been amended several times, the latest with Act No. 6 Year 2009,<sup>[674]</sup> Bank Indonesia states that bitcoin and other virtual currency are not currency or legal payment instrument in Indonesia.”<sup>675</sup>

## Japan

In Japan, cryptocurrency exchange businesses are regulated. The Payment Services Act was amended in June 2016 and the amendment took effect on April 1, 2017.<sup>676</sup> The amended Payment Services Act defines “cryptocurrency”<sup>677</sup> as

- property value that can be used as payment for the purchase or rental of goods or provision of services by unspecified persons, that can be purchased from or sold to unspecified persons, and that is transferable via an electronic data processing system; or
- property value that can be mutually exchangeable for the above property value with unspecified persons and is transferable via an electronic data processing system.

The Act also states that cryptocurrency is limited to property values that are stored electronically on electronic devices; currency and currency-denominated assets are excluded.<sup>678</sup>

Under the Payment Services Act, only business operators registered with a competent local Finance Bureau are allowed to operate cryptocurrency exchange businesses.<sup>679</sup> The operator must be a stock company or a “foreign cryptocurrency exchange business” that is a company, has a representative who is resident in Japan, and an office in Japan.<sup>680</sup> A “foreign cryptocurrency exchange business” means a cryptocurrency exchange service provider that is registered with a foreign government in the foreign country under a law that provides an equivalent registration system to the system under the Japanese Payment Services Act.<sup>681</sup>

The Act requires cryptocurrency exchange businesses to separately manage customer’s money or cryptocurrency apart from their own. The state of such management must be reviewed by certified public accountants or accounting firms.<sup>682</sup> The exchange business must have a contract with a designated dispute resolution center with expertise in cryptocurrency exchanges.<sup>683</sup> The exchange business must keep accounting records of its cryptocurrency transactions<sup>684</sup> and submit a report on the business to the Financial Services Agency (FSA) annually.<sup>685</sup> The FSA is authorized to inspect

In addition, under the Act on Prevention of Transfer of Criminal Proceeds, cryptocurrency exchange businesses are obligated to check the identities of customers who open accounts, keep transaction records, and notify authorities when a suspicious transaction is recognized.<sup>694</sup>

According to the National Tax Agency (NTA), the profit earned by sales of cryptocurrency is, in principle, considered miscellaneous income,<sup>695</sup> rather than capital gains,<sup>696</sup> under the Income Tax Act. The NTA compiled questions and answers regarding the tax treatment of cryptocurrency and posted it online on December 1, 2017.<sup>697</sup> Miscellaneous income is added to the amount of other income, excluding specified capital gains,<sup>698</sup> when a person's taxable income is calculated and taxed.<sup>699</sup>

## Macau

The Monetary Authority of Macau (AMCM) issued a statement on September 27, 2017, warning the financial industry and the public about the risks of virtual commodities and tokens.<sup>700</sup> “Any trading of these commodities involves considerable risks, including but not limited to those relating to money laundering and terrorism financing, against which all participants should remain vigilant,” the statement said. According to the statement, the AMCM had issued a notice to banks and payment institutions in Macau to warn them not to participate in or provide, directly or indirectly, any relevant financial services, following a similar ban by Chinese authorities on the mainland on initial coin offerings (ICOs).<sup>701</sup>

Previously, on June 17, 2014, the AMCM issued a statement warning about the risks of bitcoin transactions.<sup>702</sup> According to that statement, bitcoin is a type of virtual commodity that is neither legal tender nor a financial instrument subject to the supervision of the AMCM. The AMCM

warned the general public that trading in virtual commodities such as bitcoin “involves considerable risks, including but not limited to those relating to money laundering and terrorist financing.”<sup>703</sup>

## Malaysia

On January 2, 2014, Bank Negara Malaysia (Malaysia’s central bank) issued a statement saying that “[t]he Bitcoin is not recognised as legal tender in Malaysia. The Central Bank does not regulate the operations of Bitcoin. The public is therefore advised to be cautious of the risks associated with the usage of such digital currency.”<sup>704</sup>

On December 14, 2017, the Bank released, for the purposes of public consultation, a proposed policy “on the invocation of reporting obligations on digital currency exchange business as reporting institutions under the Anti-Money Laundering, Anti-Terrorism Financing and Proceeds of Unlawful Activities Act 2001 (AMLA).”<sup>705</sup> According to the associated press release:

[t]he proposed policy sets out the legal obligations, requirements and standards that digital currency exchangers, which will be defined under the First Schedule of the AMLA, must carry out as reporting institutions. This includes transparency obligations which are intended to provide relevant information for the public to better understand and evaluate risks associated with the use of digital currencies. Increased transparency will also serve to prevent the use of the digital currencies for criminal or unlawful activities. A digital currency exchanger must also declare its details to the Bank as a reporting institution.

Failure to declare its details as reporting institutions or comply with the reporting obligations may subject the digital currency exchangers to the enforcement and non-compliance actions as provided under the AMLA as well as the potential termination or denial of use of financial services in Malaysia.<sup>706</sup>

The press release also affirms that digital currencies are not considered legal tender in Malaysia and digital currency businesses are not regulated by the Bank; the invocation of reporting obligations on digital currency exchange businesses does not connote any form of authorization or endorsement by the Bank.<sup>707</sup> The statement goes on to again advise the public to “carefully evaluate the risks associated with dealings in digital currencies.”<sup>708</sup>

<sup>706</sup> Press Release, Making Digital Currencies Transparent in Malaysia, *supra* note 705.

<sup>707</sup> *Id.*

<sup>708</sup> *Id.*

The policy would require digital currency exchanges (being businesses that exchange digital currency for money, exchange money for digital currency, or exchange one digital currency for another<sup>709</sup>), to comply with regulations relating to “the identification and verification of customers and beneficial owners, on-going monitoring of customers’ transactions, sanction screening, suspicious transaction reporting and record keeping”; transparency obligations; and “requirements for the submission of data and statistics to the Bank” for the purpose of managing money laundering and terrorism financing risks.<sup>710</sup> Public comments on the draft policy were due by January 14, 2018; no date for its finalization was located.

In addition, a news report in February 2018 states that the Bank is going to release a concept paper on cryptocurrencies within the month, and this will neither recognize cryptocurrencies as money nor ban them altogether. The governor of the Bank stated, “[b]asically, we will let the cryptocurrency promoters including bitcoin, ethereum and ripple to be more transparent, the methods to be more transparent and people behind the scene are to be more transparent too. By doing so, the public can decide on its own if they want to invest in cryptocurrencies.”<sup>711</sup>

A further news report says that the Bank will require exchanges to “publish prices and the methodology used to determine those prices in a bid to boost transparency.”<sup>712</sup> The report also states that the Securities Commission of Malaysia (SC) “plans to issue a cryptocurrency exchange framework and has stepped up oversight of the sector, issuing a cease-and-desist letter to a crypto start-up on January 9th for failing to follow the country’s securities regulations.”<sup>713</sup> Previously, in September 2017, the Commission issued a statement in which it cautioned investors with respect to “the emergence of digital token based fundraising activities / investment schemes in Malaysia and elsewhere, which may be referred to as ‘initial coin offerings’ [ICOs], ‘initial token offerings’, ‘token pre-sale’, ‘token crowd-sale.’”<sup>714</sup> Subsequently, in a speech in November 2017, the chairman of the Commission stated that

we continue to stand by our statement that such schemes [ICOs], in its current form poses significant risks to investors. Therefore, SC strongly encourages investors to fully understand the features of an ICO scheme, and carefully weigh the risks before parting with their monies. We are also now part of the IOSCO [International Organization of

Securities Commissions] ICO Consultation Network where participating regulators are discussing the latest developments in this space.

At the same time, we note the growing interest of Malaysian investors in trading cryptocurrencies and digital assets. To facilitate such activities in our market and put in place appropriate investor safeguards, SC is reviewing relevant regulations and guidelines to facilitate functional and effective use cases of digital assets in the capital market, including secondary market trading of established crypto currency and digital assets.<sup>715</sup>

With respect to tax treatment, in January 2018 Malaysia's Inland Revenue Board (IRB) froze the Malaysian bank account of a UK-based cryptocurrency trading platform, apparently for the purpose of conducting an audit to determine whether the company has complied with the Income Tax Act 1967, which requires tax to be paid on the income of any person accruing in or derived from Malaysia.<sup>716</sup> A request was made under section 81 of the Act as well as section 37 of AMLA for information on all of the company's Malaysian customers. According to the IRB's chief executive, "[a]ll traders should adhere to the Malaysian tax requirement by keeping proper records for audit purposes and disclose any transactions from the cryptocurrency trading when requested by IRB."<sup>717</sup>

## Marshall Islands

The Marshall Islands has enacted legislation authorizing the launching of its own national cryptocurrency to serve as legal tender for citizens and businesses on the island.<sup>718</sup> The currency will be known as the sovereign, or SOV, and will serve as "legal tender of the Marshall Islands for all debts, public charges, taxes, and dues."<sup>719</sup> It will circulate as legal tender in addition to the US dollar.<sup>720</sup> The SOV will be introduced in a forthcoming initial currency offering (ICO), after which residents of the Marshall Islands will be provided with the means to hold, save, and conduct transactions with the SOV, and merchants in the Marshall Islands will be given access to a computer application that will enable them to receive payments made with the SOV.<sup>721</sup> The

## New Zealand

In October 2017, the Financial Markets Authority (FMA) published information on cryptocurrencies, and the risks associated with them, as part of its guidance on investment options.<sup>724</sup> In particular, it highlights the following three points about cryptocurrencies:

- They're high risk and highly volatile – the price can go up and down very quickly
- They're not regulated in New Zealand
- Cryptocurrencies, crypto-exchanges and the people that use them are often the targets of online fraud and scams<sup>725</sup>

The FMA has also published commentary on initial coin offers (ICOs) and cryptocurrency services (including exchanges, wallets, and brokering).<sup>726</sup> The information relates to the application of the existing regulatory framework for financial products and services. With regard to ICOs, the guidance states that

The extent to which an ICO is regulated depends whether a 'financial product' is being offered to retail investors in New Zealand (ie a 'regulated offer' is being made). Whether a token offered via an ICO is a financial product, and if so, what type of product, depends on the token's specific characteristics and economic substance.<sup>727</sup>

The FMA then explains how a token may be considered one of the four types of financial products set out in the Financial Markets Conduct Act 2013 (being debt securities, equity securities, managed investment products, and derivatives),<sup>728</sup> and if so, what the obligations of the issuer are. It also notes that ICOs and tokens that are not financial products "will still be subject to general

<sup>728</sup> Financial Markets Conduct Act 2013, <http://www.legislation.govt.nz/act/public/2013/0069/latest/whole.html>, archived at <https://perma.cc/9FFL-PNYU>.

consumer protection laws in New Zealand, for example prohibitions against misleading and deceptive conduct and fraud or other criminal conduct.”<sup>729</sup>

With regard to cryptocurrency services, the FMA guidance states that businesses based in New Zealand that provide a “financial service” related to cryptocurrencies must comply with the Financial Service Providers (Registration and Dispute Resolution) Act 2008.<sup>730</sup> It then explains how different types of businesses might be considered to be providing a financial service and the obligations of such businesses.

The Inland Revenue Department (IRD) has not yet issued any guidance or rulings regarding the tax treatment of cryptocurrencies. Its public rulings work program for the 2017–2018 financial year includes “GST and Income tax – Tax treatment of crypto-currencies” as being an item currently in progress, as of February 9, 2018, with “[p]reparatory work on issuing public guidance” being underway.<sup>731</sup>

According to a news report in January 2018, the IRD indicated that people should “treat money made buying and selling cryptocurrencies in the same, or similar, way they would money made buying and selling gold. That is, pay tax on the profit made by selling a currency, only if that currency was bought with the intention of resale.”<sup>732</sup> It directed the author to an information sheet on gold, which explains that amounts derived from its disposal will be income if the gold was acquired for the dominant purpose of disposal.<sup>733</sup>

In addition, a spokesman for the Reserve Bank of New Zealand (its central bank) was quoted in a December 2017 news article as stating that cryptocurrencies would be included in the bank’s major review of its currency operating model and supporting infrastructure, which is currently underway. He explained that

This project is focused on demand drivers, distribution models, and cash substitutes. It includes looking into crypto-currencies, blockchain technology and distributed ledgers.

The Reserve Bank doesn't regulate bitcoin. Whatever legal status bitcoin has is under ordinary law relating to contracts, tax obligations etc.<sup>734</sup>

An analytical note issued by the Reserve Bank in November 2017, which does not serve as an official policy position, discusses the technology involved in cryptocurrencies, their attributes and mechanics, and “the implications of cryptocurrencies for consumers, financial systems, monetary policy, and regulatory policy.”<sup>735</sup>

## Philippines

Bangko Sentral ng Pilipinas (BSP, i.e., the Philippines Central Bank) has issued guidelines concerning virtual currencies (VCs).<sup>736</sup> Specifically, these Guidelines provide that since VCs are not backed by a central bank or a particular commodity and are not guaranteed by any country, they are not legal tender.<sup>737</sup> However, since they are used as a conduit to provide certain financial services, such as remittances and payment transactions, entities that provide such services using VCs must register with the BSP and adopt adequate measures to mitigate and manage risks associated with such currencies.<sup>738</sup> In addition, the Guidelines provide for penalties applicable to VC entities that conduct operations without the appropriate authorization from the BSP.<sup>739</sup>

## Samoa

On June 12, 2017, the Central Bank of Samoa issued a statement in which it warned the public to be “very cautious and diligent” in dealing with digital currency investments.<sup>740</sup> As part of a broader warning against get-rich schemes, it advised people to ensure that they fully understand how a venture works and the risks and benefits of investing, and to contact the Bank if they are uncertain.

No other government statements or regulatory actions were located.

## Singapore

In the wake of an increase in the number of initial coin offerings (ICOs) in Singapore as a means of raising funds, on August 1, 2017, the Monetary Authority of Singapore (MAS) issued a statement clarifying that the offer or issue of digital tokens in Singapore will be regulated by the MAS, if the digital tokens fall within the definition of “securities” regulated under the security laws.<sup>741</sup> MAS’s position is not to regulate virtual currencies. “However, MAS has observed that the function of digital tokens has evolved beyond just being a virtual currency,” the statement said.<sup>742</sup>

Following the August statement, the Deputy Prime Minister and Minister in Charge of MAS (DPM) responded to questions from the Parliament for its sitting on October 2, 2017, on the regulation of cryptocurrencies and ICOs.<sup>743</sup> According to the DPM, although the MAS does not regulate virtual currencies per se, it regulates activities involving the use of virtual currencies that fall under MAS’s regulatory ambit, such as money laundering and terrorism financing. The MAS is working on a new regulatory framework for payments that will address the risks associated with virtual currencies, the DPM said.<sup>744</sup> With respect to ICOs, the MAS has not issued specific legislation, but will continue to monitor developments and consider more targeted legislation when it becomes necessary, the DPM added.<sup>745</sup>

With respect to the new payment regulatory framework, the MAS issued a consultation paper proposing the Payment Services Bill in November 2017.<sup>746</sup> The proposed Bill would expand the scope of regulated payment activities to include virtual currency services and other innovations. Under the new framework, entities carrying out virtual currency services including buying or selling virtual currency would be required to be licensed.<sup>747</sup>

**South Korea**<sup>748</sup>

The South Korean government implemented a rule that allows trades in cryptocurrencies only from real-name bank accounts (“real-name account system”) beginning January 30, 2018. Cryptocurrency dealers must have contracts with banks concerning cryptocurrency trades. The banks examine dealers’ management and cyber security systems before signing such contracts. In order to make a deposit into their e-wallet at a cryptocurrency dealer, a cryptocurrency trader must have an account at a bank where the cryptocurrency dealer also has an account. The bank checks the trader’s (customer’s) identity when it opens an account for the trader, and the trader reports his/her bank account to the dealer. The dealer also checks the identity of the trader and applies for registration of the trader’s account with the bank.<sup>749</sup> Anonymous cryptocurrency traders may withdraw from their cryptocurrency accounts but cannot make a new deposit. Minors, as well as foreigners, regardless of their place of residence, are prohibited from trading in cryptocurrencies.<sup>750</sup>

Under the Act on Reporting and Using Specified Financial Transaction Information, financial institutions are required to report financial transactions that are suspected, based on reasonable grounds, to be illegal or to involve money laundering.<sup>751</sup> The Korea Financial Intelligence Unit (KFIU) issued guidelines on such reporting by banks to prevent money laundering via cryptocurrency transactions.<sup>752</sup> The guidelines list the following examples of suspicious situations:

- When a trader deposits or withdraws 10 million won (about US\$9,400) or more a day or 20 million won or more a week
- When a trader makes financial (banking) transactions five times or more a day or seven times or more a week
- When a trader is a corporation or organization

- When a trader who does not have a record of deposit for a cryptocurrency exchange account withdraws most of the funds sent from the cryptocurrency exchange account in cash
- When there are reasonable grounds for suspecting that a trader divides the amount of transaction money or the number of transactions to avoid reporting by financial institutions.<sup>753</sup>

The Act and the guidelines also mandate that cryptocurrency dealers and banks verify traders' identification and other information.<sup>754</sup>

On February 20, 2018, the chief of South Korea's Financial Supervisory Service, Choe Heung-sik, said that the government would support "normal" cryptocurrency trading and encouraged financial institutions to facilitate transactions with cryptocurrency exchanges.<sup>755</sup>

It was reported in March 2018 that the Ministry of Strategy and Finance is preparing a draft cryptocurrency taxation framework for release by the end of June 2018. The Ministry reportedly considers income from cryptocurrencies to be capital gains or miscellaneous income.<sup>756</sup>

## Taiwan

On December 19, 2017, Taiwan's Financial Supervisory Commission (FSC) issued a statement warning the general public about the risks of investing in virtual commodities such as bitcoin.<sup>757</sup> In the statement, the FSC reiterated that in Taiwan, virtual currencies such as bitcoin are considered "highly speculative virtual commodities." According to the statement, whether tokens involved in initial coin offerings (ICOs) are securities under the Securities and Exchange Act will be examined case by case, and illegal fundraising will be sanctioned in accordance with financial laws.<sup>758</sup>

Previously, on December 30, 2013, Taiwan's Central Bank and the FSC jointly issued a statement warning the public about the risks inherent in dealing with bitcoin.<sup>759</sup> In the statement, the

<sup>759</sup> Press Release, Central Bank and FSC, Bitcoin Is Not Real Currency; Accepters Please Look to the Risks (Dec. 30, 2013), <http://www.cbc.gov.tw/ct.asp?xItem=43531&ctNode=302> (in Chinese), archived at <https://perma.cc/4N82-R6GS>.

regulators said bitcoin is not a real currency, but a “highly speculative virtual commodity.” The general public was warned about the specific risks associated with accepting, trading, or holding bitcoin. The Central Bank and the FSC will take necessary regulatory actions at the appropriate time on the provision of bitcoin-related services by financial institutions, the statement said.<sup>760</sup>

Following the 2013 warning, the FSC issued a notice on January 6, 2014, that prohibited banks and financial institutions in Taiwan from accepting or exchanging bitcoin or providing bitcoin-related services at bank ATMs.<sup>761</sup>

### **Thailand**<sup>762</sup>

The Bank of Thailand issued a circular on February 12, 2018, asking financial institutions to refrain from doing any business involving cryptocurrencies.<sup>763</sup> Bangkok Bank halted transactions involving the trading of cryptocurrencies with a private Thai company, Thai Digital Asset Exchange (TDAX), on February 24, 2018.<sup>764</sup> On February 27, 2018, Krungthai Bank, a state-owned financial institution, halted transactions related to cryptocurrencies with TDAX through the bank’s accounts.<sup>765</sup> According to a news article, the ban will continue even after a new regulation (discussed below) is issued.<sup>766</sup>

Though the government expects new laws regarding cryptocurrencies will be enacted in the future, it decided to implement temporary measures to protect cryptocurrency investors.<sup>767</sup> According to news articles, on March 13, 2018, the Cabinet approved the principles of the drafts of two Royal Decrees, one to regulate digital currencies, including cryptocurrencies, transactions, and initial coin offerings (ICOs), and the other to amend the Revenue Code to collect capital gains taxes on

cryptocurrencies.<sup>768</sup> The Decrees would require all digital asset transactions, including those of digital asset exchanges, brokers, and dealers, to be registered with the relevant authorities.<sup>769</sup>

## Vanuatu

In October 2017 a number of news media outlets reported that Vanuatu would allow people to use cryptocurrency to pay the fee to obtain Vanuatu citizenship as part of its citizenship investment program.<sup>770</sup> However, the Citizenship Office subsequently denied this, saying that there was no legal confirmation on the use of cryptocurrencies for this purpose and all payments were required to be in US dollars.<sup>771</sup>

No other government statements or regulatory actions were located.

## Vietnam<sup>772</sup>

The State Bank of Vietnam issued a decree on cryptocurrency on October 30, 2017. According to news reports, the Bank

effectively determined that Bitcoin and other virtual currencies are not legal means of payment. That effectively also outlawed the issuance, supply and use of cryptocurrencies. Those found in violation of the decree and other relevant legal principles face fines of up to 200 million dong (around US\$9,000).<sup>773</sup>

Some news media also reported that the government is trying to establish a legal framework for cryptocurrencies. It was reported that the Governor of the State Bank of Vietnam (SBV) Le Minh
