### OCCUPATIONAL SAFETY AND HEALTH ACT, 1970

The Occupational Safety and Health Act of 1970, 84 Stat. 1590, 29 U.S.C. § 651 et seq. (1970), was designed to assure safe and healthful working conditions for the labor force in this country. In addition to authorizing the enforcement of its standards, the act provides for assistance to the States in their efforts to comply with its guidelines. Federal agencies are directed to provide research, information, education and training in the field of labor safety and health.

It is the duty of employers to furnish a place of employment that is free from recognized hazards, as well as to comply with the other safety and health provisions of the act. These requirements have generated a demand for additional informational sources and guidelines to aid in compliance with its provisions. Three Congressional committees held hearings in 1972 on the administration and enforcement of the Occupational Safety and Health Act. The 93d Congress has had numerous bills introduced to amend the act. In addition, two legal publishers offer loose-leaf services on the subject.

This bibliography lists only materials that are available in the Law Library. Primary sources have been listed in all available forms. No attempt has been made to cover the broad interdisciplinary fields of labor, personnel, or scientific and technical literature.

Congressional hearings of the OSHA reveal that Federal and State controls failed to protect workers against hazardous conditions. To remedy inadequate laws the 1970 OSHA conferred on the Secretary of Labor authority to set standards, inspect working areas, and enforce employer's compliance. Dual authority was granted to the States to set guidelines and enforce their own act. The author analyzes the act and suggests methods for drafting acts by the States. He recommends a general duty clause to assure every employee in the State a safer and healthier place to work. The legislative history of the OSHA and other bibliographical information are in the footnotes.
