

Scriven's Improved Elastic Seam Drawers

This scientific drawer is worn by over a million careful dressers and it costs no more than ordinary drawer made of good material.

It fits snugly and follows the lines of the hips and legs. Waist sizes from 28 to 50 inches.

None of our patrons are more delighted than men of unusual build. It makes no difference if you are slim, stout, short, tall or of perfect proportions, you can always secure a CORRECT FIT.

The SCRIVEN'S DRAWER will yield to any strain or pressure after which it will return to its original shape.

Only the very best material is used and in comfort and durability it KNOWS NO EQUAL.

IMPORTANT DATA FOR THE HAWAIIAN FARMERS

Circular No. 1, Division of Forestry, of the Board of Commissioners of Agriculture and Forestry, has been issued over the signature of Ralph S. Hosmer, the superintendent. It is entitled "An Offer of Practical Assistance to Tree Planters." The Division of Forestry will render practical and personal assistance to individuals or corporations desiring to establish forest plantations, wood lots or windbreaks or to do other forest work. The circular, which may be had free on application, will give all the particulars.

THE JAPANESE BEETLE.

Circular No. 2; Division of Entomology, of the Board of Commissioners of Agriculture and Forestry, is by Jacob Kotinsky, assistant entomologist, and deals with the Japanese beetle fungus. A supplementary note by Brother Matthias Newell tells how to get rid of the beetle by inoculation. Brother Matthias' method is described as follows: Take a box about six inches deep and fill about one-half with damp soil. Keep this soil moist, not muddy, by occasionally sprinkling with water. Dry soil will not work. Collect a lot of beetles and place them in this box. Be sure to feed the beetles for they must not starve. The best time to place the food in the box is during the day, because then the beetles are mostly hidden in the ground. If the box be opened in the evening they will try to escape.

Valuable plants need not be taxed for their food, for any one may have noticed that even certain weeds are eaten by them. The so-called "honohono" grass is found in many places and beetles eat it readily.

Keep the lid of the box well down. No special precaution need be taken about air holes. Keep the box in a dry, shady place.

Beetles placed in such a box and properly cared for will die of the fungus, for the fungus which destroys them is now found in all localities.

A whitish substance grows out of the joints of the dead beetles, which after a few days turns green. The substance is the fungus. When a number of beetles have developed the green fungus, mix them well with some dry or nearly dry earth or fine sand, and scatter this mixture over and around the plants attacked.

U. S. PUBLICATIONS.

Recent bulletins from the U. S. Experiment station here include a valuable treatise on the Avocado Mealy-Bug with directions how to combat it with a kerosene emulsion. The bulletin by Edmund C. Shorey, on Lime an Essential Factor in Forage, has already been noticed in these columns.

ONE BRAND BEATS HAWAIIAN PINEAPPLES

One hundred and forty acres of pineapples are being planted at Wahiawa by A. W. Eames, who is also about to put in a pineapple cannery of his own there. Mr. Eames recently returned from a visit to California, where he inspected the different brands and grades of pineapples on the market there.

"I was shown some twenty different brands," said Mr. Eames yesterday, "and but one of these had points of superiority over the Hawaiian product."

However, there need be no fear of the one brand. Hawaiian pines have been pronounced by experts to be the finest in the world, and there is no reason why they should lose their place in preparation for market.

PAHALA TOBACCO DECLARED GOOD

Samuel G. Wilder informed an Advertiser reporter yesterday that some tobacco being raised on the sugar plantation of the Hawaiian Agricultural Company at Pahala, Hawaii, is giving excellent promise. Cigars made from it seem to be as good as those made from the tobacco raised at the United States sub-experiment station in Hamakua. Very fine wrapper tobacco is included in the Pahala growths.

T. J. Fitzpatrick, the cigar dealer, states that he has not yet received any cigars back from the Hamakua tobacco sent to Tacoma for experimental manufacture. It is hardly true yet, as the three cases of tobacco forming the lot were only shipped by the steamer before the last Alameda. Mr. Fitzpatrick knows of the Pahala tobacco and says it is good.

angement—where they told me that in one year they had produced eleven and twelve tons of sugar per acre. The managers of that plantation say that they do not think that the extra amount of sugar pays for the extra expense in cultivation and in fertilizing."

Mr. McGavin—I would like to ask the gentleman from New York what the reason is for excluding sugar from the absolutely free list?

Mr. Payne—I am sorry that my friend was not here when I commenced. I said that the only reason was for the sake of revenue. They need the revenue. There is no other reason, that I know of.

The gentleman from New York then touched upon the amount of revenue produced by sugar, and continued: "I remember now that I was talking about Hawaii, and free sugar there, and the result. Mr. Hatch, who is retained by the business people of Hawaii to look after their interests in Washington, appeared before the committee. He does not want this bill to pass, and they do not want this bill to pass. They are afraid that it will jeopardize something in Hawaii if this bill passes. Still, he tells about the result there. While these lands that I have referred to produce eleven to twelve tons per acre on this one plantation, they are able to produce but from two to three tons per acre on the average land in the Islands. And they say that on their investment of \$65,000,000 in plantations the last two years, the return was 2.7 per cent. profit in the whole Island. Now, if with American capital and Hawaiian capital, if with the best machinery in the world, if with steam plows and the highest and best methods of cultivation for producing sugar in the world, this is the result after thirty years of free trade with the United States, what in the name of common sense has any interest in the United States to fear from the Philippine Islands?"

"Why, Mr. Chairman, I visited one of the plantations in the Philippines and saw a sugar mill. They had carabao power with which to grind the cane. They had a carabao at each end of it, and a boy to drive the carabao. They had a three-roller mill, and they fed the rollers with one stalk at a time. * * * Now, you expect that these people, with these crude methods, without any understanding of the modern means of producing sugar, to walk at once into the position of the Hawaiian Islands, and to be able to come into your market and sell sugar at the extravagant profit of 2.7 per cent. profit on the capital invested. That is what all this bother is about in resisting the passage of this bill at 25 per cent. of the Dingley duties."

Mr. Mondell—The gentleman persists in referring to the case of Hawaii. I suppose from the gentleman's numerous visits to that Island he discovered that the plantation owners have long since capitalized our duty, and that the Hawaiian plantations are capitalized at four to six times what they cost, and they are making less than three per cent. upon the cost of the plantation, but it is because of the enormous over-capitalization there.

Mr. Payne—The gentleman does not know any such thing, and that thing is denied by gentlemen whom I met there, with all the apparent candor of my friend from Wyoming.

Mr. Mondell—I happened to be in Hawaii at the time this process was going on.

Mr. Payne—Does the gentleman say sugar plantations in Hawaii were capitalized four to six times their cost?

Mr. Mondell—I was saying that I happened to be in the Islands at the time when the bill passed making Hawaii a part of the United States, when the business of increasing the capital of Hawaiian sugar plantations was going on at a very rapid rate, and one plantation had its capital multiplied four times in less than two months.

Mr. Payne—Well, now, Mr. Chairman, it may have been true about one plantation. The gentleman may have been there. * * * He may have been there and seen one thing of the kind done. But, of course, Mr. Chairman, one swallow does not make a summer. I believe the gentlemen who have lived there all these years have had an opportunity to know better than my friend from Wyoming on a single visit. I know that they know more than I did on one visit. I admit it for myself, and I am willing to acknowledge it for him.

Biggest Bargain Ever Offered

WE ARE PUTTING ON SALE THIS WEEK ABOUT

300 PIECES

*** OF ***

TORCHON LACES

FROM 1 TO 5 INCHES WIDE AT THE REMARKABLY LOW PRICE OF

50c Per Dozen
