

Rheumatism and Neuralgia Cured in Two Days.

The Indiana Chemical Co. have discovered a compound which acts with truly marvelous rapidity in the cure of Rheumatism and Neuralgia. We guarantee it to cure any and every case of acute inflammatory Rheumatism and Neuralgia in 2 DAYS, and to give immediate relief in chronic cases and effect a speedy cure. On receipt of 30 cents, in two cent stamps, we will send to any address the prescription for this wonderful compound which can be filled by your home druggist at small cost. We take this means of giving our discovery to the public instead of putting it out as a patent medicine, it being much less expensive. We will gladly refund money if satisfaction is not given. THE INDIANA CHEMICAL CO., Crawfordsville Ind.

MOTHERS FRIEND
MAKES CHILD'S BIRTH EASY
SHORTENS LABOR, ALLEVIATES PAIN, DIMINISHES DANGER OF LIFE TO MOTHER & CHILD.

CONTAINING PHOTOGRAPHS OF 12 CELEBRATED ACTORS AND ACTRESSES

PISO'S CURE FOR CONSUMPTION.
BEST COUGH MEDICINE.
It has permanently cured THOUSANDS of cases pronounced by doctors hopeless. If you have premonitory symptoms, such as Cough, Difficulty of Breathing, &c., don't delay, but use PISO'S CURE FOR CONSUMPTION immediately. By Druggists, 25 cents.

COMMON SENSE LINIMENT.

STRAIN OF THE STIFLE JOINT.

Symptoms—Strain of the stifle joint, is not, by any means, so clearly marked as might be supposed. There is very considerable lameness, the horse being scarcely able to touch his foot to the ground. He carries the leg around with great difficulty, but brings his foot forward in the right way and places it properly, but barely resting it on the toe, or, if the case is very bad, resting it naturally but not leaning any weight on it. The above is a sprain from a jerk or twist. Heat, pain and tenderness will be found on examination of the region of the stifle joint by the hand. The patella (or knee pan,) will be thrown out of place, either to the inside or outside.

Causes—Sliding on slippery roads, the horse turning awkwardly when running, or any unnatural twisting of the limb when the weight of the body is unnaturally placed upon it. It is always the result of great violence.

Treatment—Bathe from the small of the back to the hoof, thoroughly saturating the inside and outside of the stifle joint with T. H. JACKSON'S COMMON-SENSE LINIMENT.

CORNS.

This trouble should receive prompt attention to prevent mischief.

Cause—Pounding the feet over the hard roads and stones, causing bruises on the inner shell of the foot, and forming clotted blood, which, becoming hard, causes inflammation of the nerves of the foot.

Treatment—Lift the foot and thoroughly saturate with T. H. JACKSON'S COMMON-SENSE LINIMENT the hollow between the fetlock and the heel, which will penetrate the inside of the shell, dissolving the hard substance, allaying inflammation and the corns will disappear.

FOUNDER.

Causes—Standing in draft or cold when overheated and becoming chilled; standing in cold water; overfeeding when exhausted; also sudden changes from cold to hot, causing rapid flow of blood to feet, and consequent inflammation.

Symptoms—Will be uneasiness in standing, changing from one foot to other; feet hot and very tender; stiffness in walking.

Treatment—Bathe cords and muscles of shoulder and leg with Common-Sense Liniment and lift foot and pour the Liniment freely into hollow below fetlock, daily; also feed, daily, the Common-Sense Renovating Powders as directed.

der and leg with Common-Sense Liniment and lift foot and pour the Liniment freely into hollow below fetlock, daily; also feed, daily, the Common-Sense Renovating Powders as directed.

ENLARGEMENT OF THE HOCK.

Causes by kicks, severe wrenches and bruises; no particular part of it seems to be particularly affected; commences to swell and all other inflammation appears, such as heat, pain, tenderness and great lameness. If cases of this kind are left to themselves, heat, pain and tenderness of the limbs gradually pass away, but the swelling still remains. In this case the inflammation has terminated in a thickening of all the ligaments and membranes which were affected.

Treatment—Thoroughly bathe the hock joint above and below it with T. H. JACKSON'S COMMON-SENSE LINIMENT, which will cause the fever from the injury to come out from the joint, sometimes causing it to swell more than it originally was, which will pass away when the fever leaves it, and will effect a permanent cure.

SCIATICA OR HIP SWEENY.

Causes—Hard pulling, stepping on hard, rolling substances and slippery ground, causing a strain of the muscles of the hip joint, the inner skin and muscles become attached to the bone, the lameness becoming perceptible upon starting the horse after a few moments of rest from driving.

Treatment—Bathe the horse from the small of the back to the hoof, thoroughly, without rubbing, once a day, with JACKSON'S COMMON-SENSE LINIMENT, and the cure will be accomplished.

SORE SHOULDERS.

Caused by friction of the collar or harness.
Treatment—Bathe the shoulders from the top of the withers to the lower point of the shoulders with T. H. JACKSON'S COMMON-SENSE LINIMENT, which will reduce the inflammation, create a healthy circulation and cause the sores to heal.

SET FAST AND SORE BACK.

Caused by the saddle or harness. Thoroughly saturate twice a day with Jackson's Common-Sense Liniment.

COFFIN JOINT LAMENESS.

Causes—Hard Riding, pulling, strain of lamellae inflammation and fever in the frog, continued driving on hard dry roads, sudden wrenches and twists.

Symptoms—As result of the causes, fever and inflammation set in causing a drying up of the lamellae (or cushion inside the shell of the foot). This makes a contraction of the heel and binding of the cords and leaders about the navicular bone. This causes the most acute pain to the animal and to relieve the pain he places the foot forward, resting it upon the toe. This movement produces a binding of muscles of shoulder and fore-arm making it difficult for the horse to turn on that side and afterward a shrinkage of the shoulder. Many persons, therefore, doubt whether the lameness is in the foot or shoulder, thinking it first in the foot, again in the shoulder, when in fact it is in both, being cause and effect. In nine out of every ten cases of horses treated for sweeny the difficulty lies in the foot. Many consider coffin-joint lameness incurable simply because they have treated the foot or shoulder alone, when they should have treated both.

Treatment—Bathe with T. H. JACKSON'S COMMON-SENSE LINIMENT the cords and muscles of the leg and shoulder, lift the foot and pour into the hollow below the fetlock and around the corner of the foot. This course will relax the cords and muscles of the shoulder and leg creating a healthy circulation of the blood to the foot, thereby putting new life and vigor into the foot, throwing off the inflammation and a certain and positive cure will be the result.

FISTULA.

First indications of Fistulous sore will be swelling, usually flat at point of withers, and will be found hot, tender and evidently deep-seated. Uncured hot, pus will soon form and the tumor will come to a head and break, throwing off offensive matter.

The tumor then burrows rapidly upon the outside and often beneath shoulder blade, forming "pipes" as they are called along the muscles of shoulder and involving same.

The ulcerating process continues and discharge becomes more offensive.

Causes—Are inflammation as result of tight collars, striking shoulders against beams in low

stables, saddles pushed too far forward or any blows bruising shoulder.

POLL-EVIL.

Same nature as fistula, appearing on nape of neck involving muscles of neck in same way.

Causes are tight check-rein or head-stall, hitting poll against low stable doors or beams.

Both poll-evil and fistula are positively cured by the use of Common-Sense Liniment. Wash the parts thoroughly each day with soap and warm water, using care to remove all foreign matter, dry carefully and saturate the parts with Common-Sense Liniment, which, owing to its penetrating powers, heals the sores from the bottom, throwing out the foreign matter and affecting a cure. Patience, care and perseverance must be used, particularly in cases of long standing.

SCRATCHES OR GREASE HEEL.

The first of these is really the early or first stage of the latter. In it the skin becomes hot, dry and feverish, cracks and becomes scaly.

These cracks become worse till the entire heel is covered with deep seated ulcers shooting out proud flesh and leaving an offensive discharge as disease advances.

Causes: Are mainly carelessness in grooming; allowing legs to remain over night covered with mud; allowing horse to stand in filthy stable or feet to remain filled with dirt after travel or standing in foul stable-yard or lot, or sometimes standing in stable where current of air will strike the feet.

Treatment—First remove the cause placing animal in clean stall, wash parts affected with soap and water, and after drying saturate parts with Common-Sense Liniment and pour into hollow below fetlock twice each day.

Treat Cracked heels in same way.

SWEENY, STAVED AND BRUISED SHOULDER.

Causes—Hard riding, strains, collar bruises, and severe wrenches of the shoulder.

Treatment—Thoroughly bathe the withers and shoulders with T. H. JACKSON'S COMMON-SENSE LINIMENT, which will, in a reasonable length of time, effect a permanent cure.

DAMMING OUR RIVERS.

The Benefits of Irrigation Surveys in the Rio Grande Valley.

The accounts which have been published of the work of the Topographical Bureau in carrying out the act of Congress ordering irrigation surveys, have, up to the present time, made no mention of the studies which are in progress in the valley of the Rio Grande in Texas. They are, however, of large importance. Of all the great rivers of the United States the Rio Grande is the most useless. Rising in the heart of the Rocky Mountains in Colorado, and draining the everlasting snow plains of that elevated plateau, it flows south through Colorado, New Mexico and Western Texas, till it strikes the Mexican boundary at Paso del Norte; then, swinging around, it pursues an easterly and southeasterly course till it empties itself in the Gulf of Mexico. It starts out with a good volume of water, which is increased by feeders from the Sierra Blanco; but in passing over the sandy plain through which its courses it loses so much of its contents by evaporation and percolation that for a thousand miles or more it is generally fordable and can neither float vessels nor spare water for irrigation purposes. The question which presented itself to the Government surveyors is whether this water which now goes to waste by evaporation and seepage could not measurably be saved by impounding it in reservoirs. And last month they seem to have been of the opinion that it could.

The natural site for a main reservoir is the bend of the river at Paso del Norte. A dam at this point would not interfere with trade, as the river is generally fordable there and the smallest steamers can not approach within one thousand miles of the town. But it might lead to the collection of the waters of the upper Rio Grande in a lake from which they might be conveyed in open ditches to the southern counties of Texas, which are now sand wastes. Texas is so wealthy a State that, if the project were deemed feasible, it would not have to go to Congress for means to construct the necessary works.

The uses of rivers are only just becoming understood. The Missouri river is nearly 3,000 miles long, and discharges 120,000 cubic feet of water per second; but it is nearly useless. Vessels do not navigate its waters except for a few hundred miles; lands derive no fertility from its waters; its function appears to be to drown out cultivated land every spring. The Shoshone or Snake river is 1,000 miles long; it flows through Wyoming, Idaho, Oregon and part of Washington; the country which it traverses is largely barren for want of water; the Shoshone carries so much water that in one place it has hewed out for itself a channel 1,000 feet deep; but the idea of taking the water from the places where it flows idly on its way to the Columbia to the plains which need it for agriculture occurs to few. The Colorado river is also 1,000 miles long; its volume may be inferred from the fact that it has cleaned its way through a stratified mass of rock from 3000 to 4000 feet thick; but it is utterly useless, and if by a convulsion of nature the Green and Grand rivers, which unite to form it, were to be suddenly dried up it would hardly be missed. Yet the Lower Colorado flows through a desert which might be made a garden with water.

The traveler who visits Sacramento in the spring is appalled at the vast area of tule land and of good agricultural land which is drowned by the periodical overflow of the Sacramento river. The rancher tells him that the evil is of short duration, as the water will presently flow off to the sea. It never occurs to the land-owner that this water which he is so anxious to get rid of is the source of most of the value which his land possesses, and that if he had the wit to store it instead of letting it go to waste, fields which grow fifteen bushels of wheat, would raise thirty-five bushels, and tule land now valueless could be reclaimed at a small expense. When this thought permeates the land-owner's mind we shall discover that not the half has been said of the fertility of California.—San Francisco Call.

EVILS OF SPANKING.

A Punishment That Frequently Causes Brain or Spinal Troubles.
While children are much more indulged and considered in this age than ever before, they are still the victims of a barbarous custom. I refer to the practice of whipping as punishment. Though it has long since been largely abolished in our own and other countries as a most inhuman mode of punishment, little children are still beaten, cuffed, and spanked by fond (?) parents in a most unconscionable manner. It is pretty generally conceded that cuffing children on the head or ears, is frequently fraught with the most serious results—many cases of deafness and even brain disease having arisen from this practice. Evils quite as grave, I am assured by a lady physician of extensive practice, result from the punishment known as "spanking." Blows given with more or less severity and greater or less frequency, in the region of the spine, will, she contends, cause serious brain or spinal trouble.
Moreover, the state of the brain and nervous system have a great effect upon the disposition, and the shock which may possibly cure one fault, may, by disordering and deranging the nervous system, produce faults of a much graver and more complicated nature.—Marie Merrick, in Ladies' Home Journal.

JACOBS OIL CONQUERS PAIN.

Men of eminence testify to the virtues of St. Jacobs Oil, among whom Mr. New writes as follows:
"From my own personal experience and observation, I cordially endorse St. Jacobs Oil."
Late Asst. Secretary of the United States Treasury.
