Fully Under Way.

The Southern farms may now be said to be fully under way. The crops have all been planted except a few low grounds and backward spots. The campaign is fully opened and the battle joined. Every farmer should understand that the more perfectly he discharges his duty in the cultivation of his crop the more independent he becomes of the weather. No amount of skill or industry can entirely compensate for the want of rain and sunshine in season; and on the other hand the best of seasons will not bring full returns to the indolent, careless or unskillful husbandman.

The art of merely cultivating the growing crop is comparatively simple and fairly well understood, and the farmer will generally have no difficulty in finding out where to work to the best advantage. Much depends on good implements, kept in perfect order, well fitting harness, close supervision of the daily work and attention to the wants of the mules and horses. Until the first of July the successful farmer will not have many leisure moments. When his body is not active his mind will work, and one hour of brain work will often save many hours of manual labor.

to say much about chopping cotton, that only one. It should have been combeginning of the arduous work of cultiva- batted by all the expedients which ento start the hoes as soon as the leaves on bear. But the opposite course has been the plants were fully grown and push the pursued here in the reckless destruction of work as rapidly as possible, not stopping to our forest. No reference is now made to iron around each hill, but "blocking out," that period of our history when circumgoing at nearly a half walk and making stances allowed our farmers no choice. every stroke of the hoe count its full width. It consumes too much time unprofitably to stop and clean away every sprig of fine grass near the stalks of cot- full-st scope for sound judgment in this ton, when the plows can do it much more matter. But the old course has been expeditiously if made to follow the hoes continued without abatement, and the within three or lour days. A general rule | evil is increasing in form with every -to be modified by circumstauces-would year. And it must, of necessity, go on over in a day. The quantity and size of this subject will not be dwelt upon now; 1882. the grass and weeds does not materially it is mentioned first, because it is strictly impede the progress of the plows, while it germane to the matter in hand; secondly, R seriously hinders boe-work. We have because the Department will avail itself seen good farmers "turn back" the hoes of every occasion to impress the importwhen halt over the first time and begin at | ance of its consideration upon our people. the beginning. And this may often be Another, evil, equally operative, and sound policy under unfavorable circum- equally injurious, is now sought to be imstances of weather-when grass has be- pressed-that is the evil of shallow plowcome so rampant that hoeing can only ing. Deep tillage is recommended on all progress at the rate of half acre per day grounds, many of which were stated in a our friends and the public generally to call and All Wool Suits, per hand. We trust none of our farmers, former number of the Bulletin. The point examine at our Store on to cause them to hesitate whether to go now is deep plowing as a means of storing forward or turn back.

# Fruit Evaporation

in the line of preserving food, there is none which promises to add more to the revenue of the farmer and gardener than the evaporation of fruit. Of the benefits of this new process, J.

G. Bennett says in an interesting paper,

in the Rural New Yorker: In a properly evaporated fruit there is no loss or pleasant or valuable properties, but an actual increase of fruit sugar, from sugar ranging from 10 to 25 per cent, in different fruits, as determined by chemitransition awaiting our really unsurpassed fruits, berries and vegetables at their full stage of ripening, we have in the use of the evaporator a culmination of the same organic forces, and in a few hours the jaices, which heretofore formed and perfected the fruit (but which after this the maximum development of sugar secured and the water evaporated, the change being analogous to the transition of the grape to the sweeter raisin or the acid creen apple to ripeness, with corresponing delicacy. The cell structure remains unbroken and the articles when load of pumpkins may be driven in from the field in the morning, and the next morning shipped to the antipodes, in a barrel. The sweet potato which perishes has been found by Mr. E. I. Holmes of McAden, Dr. T. C. Smith, and R. H. Jordan & so rapidly as to be unknown to most of the this place. He has used the tobacco dust Co., Druggists. markets of the world, is reduced to an im- from his factory on his potatoes and the perishable condition by pneumatic eva- bugs bit the dust in more than one sense. poration, and will soon become a familiar He puts it on in the morning when the luxury on the tables and markets of the world and at all seasons of the year alike. Its slices, placed in cold water and brought to a boil for thirty minutes, are dew is on the plants and in every instance he has, to use his own words, "cleaned them out." This is a grand discovery as it is so much safer than Paris green, and Highest testimonials from Schools and citizens ready for the table or frying pan, and are in no respect inferior to the original vege- has tried it on his own crop and is anxious class Tuner. table. decay. Sweet corn is rejuvenated. If taken strictly in the milk and treated before the world's end as the start. Green cur- each tree with its variety is given. rants and gooseberries retain their favorite characteristics of flavor sealed up in them for travel and time. Forty pineapples have been compressed into a small cake which an infant might hold in its hand, and afterward resurrected as 40 receiving a beautiful line of Gents' Silk, Stiff and pine-apples. The evaporated tomato is a remarkable product. No successful attempt has ever before been made to remove the condition of fermentation (water) from this fruit. The pneumatic evapora-

tor reduces the whole pulp of the tomato to a condition like that of the dried fig. A bushel of the fruit after evaporation i compressed into a solid cube like plug tobacco, measuring four or five inches each way. Every pound of it makes eight quarts of tomatoes in the original state. Tomatoes may now be raised with advantage, like so many other things, whenever there is an evaporator at hand. The manufacture of evaporated fruit by the individual farmer and orchardist has popularized the industry the future of which it would be difficult even to anticipate. With an apparatus of universal adaptation and suited to the wants of the large or small orchardist and fairly managed the business is made both remunerative be so continuously employed, beginning with the early summer berries, vegetables and fruits, extending its usefulness through the winter upon the fall crops, the daily wasting products of the farm suggesting its use and inculcating the maxim, "It is accumulates wealth."

How to Avoid Effects of Drouth.

From the N. C. Agricultural Bulletin. The subject of drouth is one of the deepest interest to our agriculturists. It is the most formidable natural enemy to Cultivating Cotton .- It is rather late production in our climate-indeed the That period only is referred to-the last forty or fifty years-during which the conditions were such as to admit of the however, will get into such a condition as to which it is desired to direct attention up moisture as a reserve for the needs of The first hoeing of cotton should be in- the plants. Further, he must have give me a call, examine my goods and hear my remarked that the power of retaining moisture was in proportion to the thoroughness of the tillage. Without the advantage afforded by observation upon this point, the fact that evaporation is essentially a it would be a clear deduction of common ripening proce-s, the development of sense, that land ploughed six inches deep would absorb twice as much water as that which was ploughed three inches deep; cal analysis. Instead of a retrograde and that land plowed nine inches deep would absord three times as much. Now, the fact here mentioned is full of sugges tion to the reflecting farmer. The cultivator has but to avail himself of the absorbent power of the soil to render himself comparatively independent of the seasons. The remark applies, whatever may be the hasten decay,) are quickly matured, and crop which he cultivates. It is, however, peculiarly and emphatically applicable to the cotton planter. Cotton is a tropical plant and delights in a high temperature. It takes the extremest drought to cut it off entirely even with very shallow cultivation. Now, every season affords enough moisture, if it were judiciously husbanded placed in the juvenating bath of fresh to secure a good crop in almost any seawater return to their original form, color son. The means of doing so are in the and consistency. Thus, a few ounces of power of every one. # What Kills Fruit Trees.

Deep planting is one error-to plant a tree rather shallower that it formerly stood is really the right way, whilst many plant a tree as they would a post. Roots are of two kinds-the young and tender rootlets, composed entirely of cells, the feeders of the trees, always found near the surface getting air and moisture; and roots of over one year old, which serve only as supporters of the trees and as conductors of its food. Hence the injury that ensues when the delicate rootlets are so deeply buried in the earth. Placing fresh or green manure in contact with the young roots is another great error. The place to put manure is on the surface, where the elements disintegrate, dissolve and carry and pleasant. Few farm implements can it down. Numerous forms of fungi are generated and reproduced by the application of such manures directly to the roots. and they immediately attack the tree. It is very well to enrich the soil at transplanting the tree, but the manure, if to be in contact with or very near not what we make but what we save, that the roots, should be thoroughly decom-
