The Shortage of Paper To Blame.

The fact that the oil section printed in connection with today's paper is so entirely given over to advertisements is simply due to the fact that paper is as scarce as 6½-inch roping, which is about the scarcest commodity that an oil man knows anything about.

It will soon be necessary to go without newspapers unless some new scheme is invented for making a substitute for ordinary print paper just as now they are making pipe out of fibre and are printing magazines without the aid of a linotype operator.

There will be many who will be disappointed who expected to have large advertisements in today's paper, but they can be sure that within a week or ten days conditions will have changed for the better and more advertising and more news can be printed.

The main thing about the oil section printed today is that it shows that this is the liveliest country on earth and is further more going to continue its present prosperity. All experts who are familiar with the situation in the mid-continent agree that whatever happens business here is going to continue at top speed.

In the Louisiana Field.

Special to The World.

SHREVEPORT, La., Nov. 9.—The Arkansas Natural Gas company has a 10,000-barrel well at only one foot in the sand which is found at 2,078 feet on the Shaw farm.

The Louisiana Oil and Refining company have completed their Shaw A 4 in 19-21-7, which is good for 2,000 barrels. It is from the shallow sand found at 1,221 feet.

The Gilliland and Foster Shaw A 2 in 30-21-7 is 150-barrel pumper at 1,830 feet.

Reeves and others are 18 feet in the sand which was found at 1,800 feet in their number 2 Hardy farm and are expecting a big well.

Chester Thompson of Wyoming and Samuel McGrath of New York have purchased 6,000 acres in the vicinity of Mammerfield, Claiborne Parish, and will begin operations immediately.

The discovery of oil in the southern part of the Shreveport oil district, news of which comes from Marthaville, Natchitoches Parish, is to the effect that a well on the Ferguson land, eight miles north east of Marthaville, is making oil outside of the casing of an old well that was drilled sometime ago and capped.

One Hundred Miles of Pipeline Under Construction

Special to The World.

PONCA CITY, Nov. 8.—The Marland Refining company has now over one hundred miles of pipe line under construction. The 4-inch oil pipe line of the Ray County Gas company, from Ponca City to the producing property of the Marland Refining company at Quay, Okla., has been completed to a point six miles east of Burbank and is being laid on south to Quay.

Surveys are being made for a 4-inch line to be built from the proposed pumping station six miles east of Burbank to Wynona, from which point production from leases bought at the Osage sale on October 3, will be run, and a survey will be made for a 3-inch line from the Mid-Kah-She allotment to the Quay 4-inch line at a point 12 miles west of Blooming. These two lines will run a large part of the Osage county production.

Three Pumping Stations.

Eighty acres of land have been bought at Wynona for a pumping station site. The station there will have a daily capacity of 6,000 barrels.

A pumping plant will be built at Quay to boost the 1,000 barrels daily production there to the pumping station at Burbank. The station at the latter place will have a 6,000-barrel daily capacity and will be the central gathering point for all the oil lines into Osage county.

The 8-inch gas pipe line from Burbank to Kansas will soon be ready to carry gas, as will also the 6-inch line from Newkirk in Kay county north to the junction point with the line into Kansas.

The Ponca City-Quay line is 64 miles long, the Burbank-Wynona line 19 miles long, the 3-inch line to the Min-Kah-She lease is 13 miles long, the 8-inch gas line 20 miles long, and the 6-inch line 10 miles long.

Important News from Beggs.

The most important news of the day comes from the Prairie Oil and Gas Co. well in 7-15-11 that is flowing 22 barrels per hour, or 8 more than 500 barrels per day and, even at that, the well is not drilled near as deep into the sand as many of the wells to the south, and might increase its production by deeper drilling.

The Atlantic Petroleum has two rigs offsetting it on the south on the Drew farm and appear to have a 160-acre lease that will be worth a pile of money.

The Purdy well is 8-15-11 is still drilling in hard sand and ought to get into the big pay by the time this reaches the readers. Down south of Beggs there is much to report that is of the greatest interest as, for instance, the Reibold et al. No. 1 Vierson on the northwest of the northwest of the southwest, 7-14-12 that had stopped at 2,761 and had a showing for 20 barrels, has been drilled deeper and got the big pay at 2,763 to 2,776, and have a 500-barrel producer.

The very important Anderson & Halliday well in the southwest of the southwest of the southwest of 8-14-11 is making 60 barrels from sands found at 2,448 to 2,464 feet. The Iron Mountain, No. 4 Warner in the southwest of the northeast of the northeast of 12-14-11 is still making 100 barrels from sands found at 2,843 to 2,847 feet.

The Cosmos Oil Co. (E. E. Shuck et al) No. 10 Cozer in the northeast of the northwest of the northeast of 8-14-12 is reported good for 10 barrels after a 10-quart shot.

Simons et al. have an 800-barrel well in their No. 2 Warner in the northwest of 12-14-11. The top of the sand was found at 2,758 feet and drilled to 2,767 feet his No. 3 Higgerstaff in the northeast of 12-14-11 is making 40 barrels per hour in sands found from 2,746 to 2,759 feet.

The Harvey Trafe Oil Co. have completed No. 3 on the Isaac Dees farm in the northeast corner of the southeast of the southeast of 31-14-11, and have a well which is reported to be good for from 1,000 to 2,000 barrels. The sand was found at 2210 feet which was the same as in the No. 2.

The Rockwell Oil company's No. 4 in the north half of the southwest of 10-15-11 is reported making 800 barrels from sand found at 2,100 feet. It was only 2½ feet in the pay. They are moving in on No. 5 Cornelius also in 10-15-11 and will drill to the Tanaha sand, it being a diagonal offset to the big well reported above.

The same company is spudding for No. 2 Mack farm in 1-15-11 and have a rig up for No. 2 on the Grayson in 2-15-11.

The Rockwell Oil company has a rig up for No. 2 John Coleman in the northeast of the northeast of 10-15-11.

The Van Orman and others are starting a test in the southeast of the northeast of 2-15-11, which will offset the Grayson No. 1.

Producers & Refiners' Corporation Doings.

The Producers & Refiners' corporation are drilling at 2,200 feet on McIntosh No. 6 in the northwest corner of the northeast of 12-14-11, and at 200 feet on No. 8, one location east of No. 6. No. 7, center of the south line, is spudding in. They have rig built for No. 9, one location north of No. 8, on the east line. No. 5 was drilled in Sunday, Nov. 2, and is making 1,300 barrels.

They are now moving in tools for No. 2 Isparbecher in the southeast corner of west half of the northwest of 34-15-11, where they expect to drill to the deep sand, and which affects the shallow gas well on this lease to the west.

They have rig built a[illegible] are moving in tools for No. 4 Jefferson [illegible] the center of west line of east half of [illegible] southeast of 30-15-11.

They are drilling at 2,700 feet on No. 1 P. I. Brown, located in the southwest corner of the northwest of 2-14-11.

They are rigging up for well No. 1 in the Osage, located in the southeast corner of the northwest of 31-27-6, and are drilling at 1,865 feet in No. 1, located in 19-28-9, in which latter operation Gardner & Spencer are also associated with them.

The Producers & Refiners' corporation are today drilling in No. 2 in block 75, northwest extension, Burkburnett field, Texas.

They have today commenced running oil through their new pipe line from the Beggs and Youngstown field to their refinery at West Tulsa, the first oil being turned into the line on the south end Saturday, Nov. 8.

Something New Under the Sun.

A seperator that will handle 4,000 to 6,000 barrels of oil from a well that is also making 6,000,000 or 10,000,000 cu. feet of gas is some invention and best of all the credit for same is due to T. K. Smith, a Tulsa man, who is having them manufactured in Tulsa, and any day they can be seen loaded on flat cars with a big placard announcing Tulsa as their source. The seperators do away with the old fashioned flow tank, generally known as gun barrels and their accompanying waste of light products. The one that is set up on the vacant lot between Third and Fourth on Cincinnati is attracting much attention. The seperator portrayed in the advertisement in today's section is on the Harrison lease at Ranger. It actually handles 6,000 barrels of oil in 24 hours, saving the gas, which would have otherwise gone to waste, for commercial purposes.

Smith Separator Company.

The advertisement of the Smith Separator company, published elsewhere, and the accompanying illustration will be of the greatest interest to oil men throughout the mid-continent field, especially to those who are operating where there is a surplus of gas along with the oil.

The separator as shown in the picture is located on the Harrison lease in the Ranger field, and has handled 6,000 barrels of oil in 24 hours, and separated and saved for commercial purposes, about fifteen or twenty million feet of gas per day.

Had this separator been invented and used in the palmy days in the Cushing field, it would have eliminated much trouble, both with the state and with gas companies. As it is, it was put on the market in an equally opportune time, as there are millions of feet of gas being saved by the use of these separators that formerly went to waste, both at Ranger, Desdemona, Burkburnett, and in the various fields in Oklahoma. There is one of them in use on the Skelly & Russell lease south of Kellyville that has paid for itself several times over. There are more than 100 of these separators in use at the present time, and it has only been on the market about 60 days. Those who are using it are all the best known oil producers including the Prairie Oil & Gas Co., Mid-Kansas Oil & Gas Co., Sinclair Consolidated companies, Selby Oil & Gas Co. and the Ryan Petroleum company of Wichita Falls, Texas. In the Osage there is one in operation on the Alexander lease, which is within driving distance of Tulsa, and can easily be seen by one who has trouble in separating his oil and gas.

T. K. Smith of the firm of Chestnut & Smith, who invented this separator, has put an apparatus in the hands of the oil men that has filled a long felt want. His invention will be in use as long as oil and gas is found, and he is entitled to the greatest credit for his endeavor.

David Feenberg, Self-Made Man

David Feenberg, president and general manager of the Feenberg Pipe and Supply company, is a self-made man. Thirteen years ago he came into the mid-continent oil fields with nothing but ingenuity and a capacity for hard work. Today he is the head of a supply company which has an excellent standing and whose business is steadily increasing.

Its plant and pipe yard on the M., K. & T. railroad is thoroughly modern in every respect and extends over a space of four acres. It has private trackage capable of handling 30 cars per day.

The company was organized four years ago. Its office is located at 519-21 East First street.

OKLAHOMANS GET FUNDS BACK

Return of $400,000 to Be Made to States for Undelivered Supplies.

ST. LOUIS, Nov. 9.—Return of $400,000 for undelivered surplus army supplies to persons in Missouri, Kansas, Oklahoma and Arkansas will be made immediately, it became known here today. The money will be returned through postmasters in the four states, it was said.
