DAIRYING

THE DAIRY COW ON THE FARM.

By Joseph Ririe—Ogden

To the Editor of The Deseret Farmer:

In traveling around these beautiful and fertile valleys observing the large farms, the good crops of hay, fruit, grain, beets, potatoes, etc., noticing that neighbors are one-half to one mile apart in many parts, and seeing the weeds growing so abundantly on the ditch banks and roadsides that it seems as if ten per cent of our farms are weeds, we are impressed with the fact that we are land poor.

The farmer who works hard trying to care for so much year after year, cropping his land, selling all off and putting nothing back on, will, in a few years, find that not only he, himself, has played out but that his land will run down also.

And when he pays the expenses necessary upon our irrigated farms, besides taxes, hired help, and wear and tear of implements, he must not allow himself very large wages, or he will be in debt at the end of the year.

If our farms were quartered and four families placed where now there is but one, with eight to twelve dairy cows kept by each, our returns would be greater and our work lighter.

At one of our experiment stations they have kept a record of a herd of twenty-seven ordinary cows for ten years. The average was 6,513 pounds of milk per year, making 332 pounds of butter. We have some in this community that will produce nearly as much. This is about 2½ gallons per pay for ten months, and 332 pounds at 25 cents (which is an average for butter for the last year) would bring us \$83. We figure our expense as follows: Five tons of hay, at \$5 per ton, \$25; six months' pasturage, at \$1 per month, \$6; allow \$12 per year for labor. (In the east they are willing to take skim milk and the fertilizer for the labor). The total would be \$43, leaving a net balance of \$40, besides a good calf and the skim milk, which, for feeding calves, hogs and poultry, they value as worth 25 cents a hundred.

If we feed a little grain, I think

our returns would be large enough to offset the cost of the grain.

Where can we find a better investment than a good cow, if she brings us from 50 to 100 per cent profit yearly?

You who are familiar with conditions in the old countries, where land is worth ten times what it is here and no better markets, know they are getting rich with cows.

In Denmark and Holland, close to the large cities, where land is worth from one to two thousand dollars per acre, you find the dairy cow everywhere. But there the farmer not only keeps good cows, he cares for them. He feeds and waters and salts them well. He grooms and stables them. He does not allow a dog around, nor an unkind word spoken to his cows, and they appreciate his treatment by filling the milk pail two, and some three times a day.

A few weeks ago I was impressed, on visiting a farmer in Utah, who invited me to go down to the pasture and see his cows. When we entered the gate the cows were a quarter of a mile away. He called two or three by name and his entire herd of twelve came up to him. He patted them, went around rubbing them, talked as kindly to them as to his children, and they heard his voice and followed him.

He showed me his returns for the past year, and he had received in cash from \$110 to \$160 each month, besides feeding a nice lot of hogs and poultry. His cows were mixed Jerseys and Guernseys. Three were pure-breds. He said they averaged \$7 per head. He fed them bran and malt, kept an account of his expenses, and declared his cows paid \$45 per head clear. What one can do others can. He said: "I have thirty acres of land, a good orchard, good house, good barn and sheds. I have a family of eight children, and we take life easy. We have plenty to do and are happy. My boys and girls need not go away from home for work to get spending money. We have money in the bank, never run in debt for anything, and our cows are doing it all."

We cannot afford to keep our cows on poor, dry pastures in the summer and leave them out in the open yards
