Why Teeth Stain

You leave a film-coat on them

All statements approved by authorities

Most teeth are dimmed more or less by a film. Smokers' teeth often become darkly coated.

That film makes teeth look dingy, and most tooth troubles are now traced to it.

Millions now combat that film in a new, scientific way. This is to offer a test to you, to show the unique results.

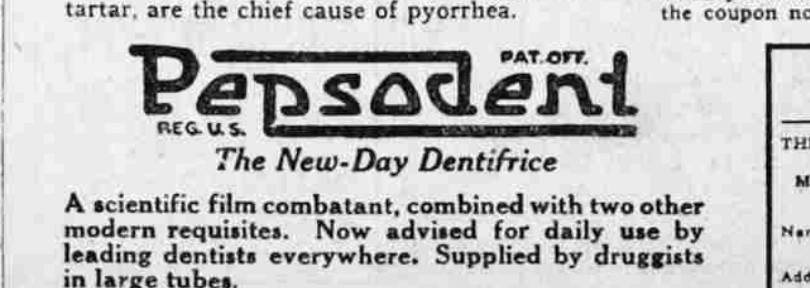

You must end film

The film is viscous—you can feel it with your tongue. It clings to teeth, enters crevices and stays.

Ordinary brushing methods leave much of this film intact. So millions find that well-brushed teeth discolor and decay. You must attack film in a better way, else you will suffer from it.

It is the film-coat that discolors, not the teeth. Film is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

A Gift A 10-Day Tube of Pepsodent is sent to all who ask. See coupon.

Efficient ways Dental science, after painstaking research, has developed effective ways to fight film.

Watch these new effects One ingredient is pepsin. One multiplies the starch digester in the saliva to dissolve the starch deposits that cling.

You will always brush teeth in this new way when you watch the results for a week. Cut out the coupon now.
