When you need two-vision lenses—be sure to get **KRYPTOK LENSES** (Worn by over 250,000 people) For all other two-vision lenses there is a line or seam between the near and far vision portions that makes the wearer look less than his best, and unmistakably brands him or her with a sign of age. Kryptok are double-vision lenses that look exactly like regular one-vision lenses because there are no lines or seams in them.
